PART I

REPORT OF THE INDUSTRIAL COMMISSIONER

To the Legislature:

Herewith I beg to submit my report of the operations of the State Department of Labor for the fiscal year ended June 30, 1921, and include therewith various observations of the administration of the Department beyond that date. The tables and statistical matter all relate to the fiscal year. I shall not confine myself to that year alone, however, but will discuss details of administration that I deem important for you to know, down to the time of writing this report.

The reports of the various heads of bureaus made to me are included herewith for your information. The report of the State Insurance Fund, however, is not submitted at this time, but I beg leave to submit that to you at a later date, when the data for the report are all in hand. Following the custom of previous years, established by my predecessors, that report will be for the calendar year, ended December 31, 1921, instead of for the fiscal year ended June 30. By the terms of the Insurance Law, all insurance companies are required to report to the Superintendent of Insurance as of the close of the calendar year, and the report of the State Insurance Fund will thus be kept in comparable terms with other carriers of compensation insurance. I shall, however, submit certain observations in this report with regard to the State Fund.

RECODIFICATION AND REVISION OF LABOR LAW

The Legislature of 1920, by joint resolution, appointed a joint committee of the Senate and Assembly to study the Labor Law and to submit a plan for its recodification and revision. This committee met shortly after the close of the session of the Legislature and took up the task of preparing such a recodification. The need of a general recodification of the Labor Law had long been recognized. It had been recommended by the Factory Investigating Commission in 1913, and indeed a draft of a proposed recodification was in 1915 presented to the Legislature. The Labor Law had been amended in many respects, new sections added and old ones repealed or the language altered, so that there had come into existence ambiguous provisions and in some cases positively conflicting provisions, as well as obsolete sections. Therefore, it was at times difficult for the Department clearly to understand the intent of the law, not to mention the employers and workers of the State. Likewise, the statute contained many provisions of minute detail of organization, that might well be left to rule or regulation which would be more elastic and could be altered to meet varying conditions and changed circumstances.

The Joint Committee, commonly known as the Knight-Brady Committee, under the chairmanship of Senator John Knight, undertook first a rearrangement of the law to make it more orderly and readily understandable, and at the same time to clear up any ambiguities and inconsistencies, but without making any changes of substantive law. In doing so they followed the plan and general outline of the proposed Wagner recodification of 1915.

This recodification was printed by the committee and widely distributed and thereafter public hearings were held thereon.

During the course of its public hearings, the Knight-Brady Committee took up the matter of substantive changes in the law, and made rather extended inquiry into the matter of administrative methods in the Department and the workings of the administrative provisions of the old law.

While these inquiries were still going on, Governor Miller submitted to the Legislature of 1921 his first message in which he commented at some length on the administration of the Department of Labor as illustrating the extravagant and inefficient methods that were inherent in a commission form of administration, and, while not criticising the persons composing the commission, he did very strongly condemn the system.

It is needless for me to undertake to repeat the arguments urged by the Governor in his message. They are familiar to most of your members. The important part of his recommendation, in the interest of efficiency and economy and a better method of administration, was that the old commission, with its wide powers of administrative, judicial and legislative character, be supplanted by a new organization that would separate and keep separate the administrative responsibility from the judicial and legislative powers. He suggested that the administrative authority and responsibility be centered in a single commissioner, responsible to the Governor, and that the judicial work of passing upon claims for workmen's compensation and the legislative function of adopting rules and regulations to carry out and supplement the Labor Law be committed to a board of three members.

The Knight-Brady Committee adopted the plan outlined by the Governor, and bills were prepared to carry out his recommendations.

Question then arose as to whether such revisions in the administrative provisions of the Labor Law were to be contained in a separate bill or whether they should be included in the draft of the recodification. Believing that it would be wholly inconsistent for them to pass the recodification bill containing administrative provisions in which they did not believe and intended to change. and then pass a later amending act which would have been an awkward method of procedure, and likewise would have been confusing to people afterwards in that the Labor Law would not have been contained in a single act, the committee decided to incorporate the administrative changes in the recodification act. This aroused a storm of unjustifiable criticism and led to charges of bad faith. The committee not only did not act in bad faith but acted in a very proper and wise manner. The opposition to the bill on that ground did not seem to be offered in good faith, and the fears then expressed have been shown groundless.

Public hearings were held on the proposed measure. The recodification of the law not only was not criticized but was praised by all who examined it as being a very much simplified law, containing all the provisions of the old law, but reduced to simple language and arranged in a manner easy of understanding and in logical order.

Opposition to the reorganization, where it was not merely partisan, was confined chiefly to expressing fear that the elimination of many positions by title in the law, and the striking out of the minute details of organization of bureaus and divisions, and the centralizing of power completely to reorganize the Department in the hands of the Commissioner, would tend to weaken and break down the safeguards of the workers of the State. This opposition, if sincere, was founded upon a misconception and was groundless, as I believe will appear from the facts set forth hereinafter.

The recodification and reorganization bill was passed and became a law with the approval of the Governor on March 9, 1921.

REORGANIZATION

Following the enactment of the revised Labor Law, the Governor appointed, and the Senate confirmed, Henry D. Sayer, of Richmond Hill, Queens county, to be The Industrial Commissioner, and appointed as members of The Industrial Board, John D. Higgins, of Oswego, Chairman, for the term expiring January 1, 1927, T. V. O'Connor, of Buffalo, for the term expiring January 1, 1925, and Mrs. Rosalie Loew Whitney, of Brooklyn, for the term expiring January 1, 1923.

The Commissioner and all the members of The Industrial Board qualified and took the constitutional oath of office on April 15, 1921, and thereupon the former Industrial Commission under the law ceased to function.

The members of the Industrial Commission in office at the time of the reorganization and who had been in office for the entire previous part of the fiscal year were Edward F. Boyle, of New York, Chairman; James M. Lynch, of Syracuse; Henry D. Sayer, of Richmond Hill; Frances Perkins, of New York; and Cyrus W. Phillips, of Rochester, Commissioners.

Shortly after entering upon his duties as a member of the Board, Mr. O'Connor resigned to accept membership on the United States Shipping Board, under appointment of the President. To fill the vacancy caused by the resignation of Mr. O'Connor, the Governor appointed Richard H. Curran, of Rochester.

To be Deputy Commissioner, with full power to act as Commissioner in the absence or inability of the Commissioner to act, I appointed Martin H. Christopherson, of Yonkers, an engineer of expert knowledge, training and experience, and a former member of the Advisory Industrial Council. His wide experience in conducting industries under the New York law and elsewhere, his enthusiasm for safety engineering and accident prevention, and his well known attitude of fairness to the workers combined to make him an exceptionally well qualified man to aid me in the important work of the Department, and his willingness to serve in that capacity is a cause for congratulation to the State.

Upon assuming office I abolished the old positions of First, Second and Third Deputy Commissioners of the former Industrial Commission. There being a single statutory Deputy Commissioner, it seemed to me inconsistent and unnecessary to retain these positions. The incumbents of the positions were James L. Gernon, First Deputy; William C. Archer, Second Deputy; and Edward D. Jackson, Third Deputy.

To be heads of the various bureaus, I appointed James L. Gernon, of Brooklyn, former First Deputy Commissioner, to be Director of the Bureau of Inspection; Stanley L. Otis, of New York, an insurance actuary, and former chief examiner of insurance of the State of Michigan, who has written extensively on the subject of workmen's compensation, to be Director of the Bureau of Workmen's Compensation; and Seaman F. Northrup, of Watkins, Schuyler county, former county judge and one time district attorney, to be Director of the Bureau of Industrial Relations. Leonard W. Hatch, Manager of the State Insurance Fund, was retained in that position, and E. B. Patton, Chief Statistician of the Department, was likewise retained. Deputy Commissioner Christopherson was assigned to supervise the work of the Bureau of Research and Codes, in addition to his other duties in the Department.

Clarence A. Meeker, of Jefferson county, was appointed Secretary of the Department, and Mabel G. Merrill, of Queens county, private secretary to the Commissioner.

The work of the various bureaus will be discussed under their appropriate heads.

THE INDUSTRIAL BOARD

Immediately upon its organization the Industrial Board assumed responsibility for the judicial and legislative work of the Department. The immediate task was that of reviewing and hearing the constant stream of sharply contested compensation cases, which called for the decision of the Board rather than a referee.

At first, and for a short time, the Board sat together on compensation cases in order to acquire familiarity with the problems presented and to enable each to learn the points of view of the others. In learning their problem the Board also undertook the original hearing of some cases, instead of doing only review work.

In this manner they quickly sensed the practice and procedure and the problems with which they would have to deal.

Soon, however, in order to expedite the hearing of cases the Board divided up its compensation hearing work, and calendars were held before individual members, instead of the whole Board. Only in cases presenting novel points or exceptional difficulty on the facts or law, do claims come before the entire Board. The Board, however, is in frequent conference over cases.

One day a week is always reserved for formal meetings of the Board for the consideration of its business. On such days are brought before it appeals from orders of the Commissioner issued by him to employers or factory owners directing compliance with various provisions of the Labor Law, and also applications for variations from the provisions of the Labor Law or of the Industrial Code.

The Board has also considered for adoption various proposed new rules or modifications of existing rules of the Industrial Code. During the month of December the Board held public hearings on four proposed new rules, such hearings being held in Albany and New York, and in addition thereto in Buffalo, Rochester and Syracuse. The proposed rules that the Board has under consideration relate to the construction and arrangement of stairways and exits in factory buildings under six stories in height, the construction and arrangement of new mercantile establishments, the lighting of factories and the conduct of work in tunnels and in caissons under compressed air.

All sessions of the Board are open to the public and minutes are kept in which are recorded the votes of each member on all questions coming before the Board. The Secretary of the Department is designated to act as secretary of the Industrial Board and is responsible for the records of its meetings. Whenever matters are before the Board involving the administration of the Labor Law or the orders of the Commissioner, the Commissioner or Deputy Commissioner sits with the Board and takes part in its proceedings.

PRESENT ORGANIZATION OF DEPARTMENT

One of the principal objections voiced to the passage of the bill to reorganize the Department was that the bill eliminated the various specific statutory provisions for bureaus and divisions and left the Commissioner free to abolish entire bureaus if he saw fit, and thereby to weaken the administration of the law. In no other department of the State government that I am aware of is there any such statutory provision for bureaus and divisions as existed relating to the Department of Labor. In all such departments the responsible head of the department is expected to organize the department in such a manner as best to carry out the purposes for which it was created, within the limits of the appropriations made by the Legislature.

The objections made to the present law in regard to the Department of Labor, therefore, either proceeded from a misapprehension of the facts or from an unwillingness to entrust to the new head of the Department the same freedom of action as has heretofore been entrusted to other department heads.

In order, however, that there be no misunderstanding as to the organization of the Department and the powers and duties of the various bureaus and divisions, the Commissioner by general order issued effective July 1, 1921, set up in definite form the organization of the Department as it now exists. This order was known as General Order No. 21 and a copy of it is attached hereto and made a part hereof. (See Appendix 1.)

GENERAL ADMINISTRATION

Under this order, the general administration of the Department is exercised through the office of the Commissioner, the Deputy Commissioner being given full power and authority to act as Commissioner in the Commissioner's absence or inability to act, and in addition is given general direction and oversight of the work of the Bureau of Inspection, the Bureau of Research and Codes and the Bureau of Industrial Relations.

SECRETARY

The office of Secretary of the Department was established and the Secretary designated as custodian of the records and seal of the Department and assigned to act as secretary of the Industrial Board. The Divisions of Accounts and Cashier were placed under the supervision of the Secretary. He was given charge of the stockroom and all requisitions for supplies or printing were directed to be submitted through the Secretary's office. The care and maintenance of the building owned by the State and occupied by the Department in New York City was charged to the Secretary.

CHIEF STATISTICIAN

The former Bureau of Statistics was abolished as a separate and independent bureau, and the Chief Statistician was attached directly to General Administration under the direct supervision of the Commissioner. The functions of the Chief Statistician relate to the several bureaus of the Department and he is required to examine the records and files of them from time to time. As occasion may require the Commissioner may direct the Chief Statistician to examine the records of bureaus and submit statistical reports of their work. This function to my mind is clearly a staff function of the Commissioner, and can more readily and with less friction be so exercised if under the immediate direction of the Commissioner.

BULLETIN

The official bulletin of the Department was also placed under the administrative office.

ASSISTANTS TO COMMISSIONER

Under the former organization of the Department, offices of different bureaus in the same city, other than Albany or New York, were entirely independent of each other and their activities were in no way corelated. This was inherent in the system of a five-headed commission, each bureau being under the supervision of a different commissioner.

Shortly after my taking charge of the administration of the Department, I designated three Assistants to the Commissioner and placed them in charge of the offices in Buffalo, Syracuse and Rochester. In each of these cities there are offices of the Bureau of Inspection, the Bureau of Workmen's Compensation and the Employment Division as well as the State Insurance Fund. Because of the presence of the Commissioner and Secretary in the Albany and New York offices, no local administrators were necessary in those cities. At the present time all local administrative questions are referred to the Assistants to the Commissioner, and local people have a direct responsible representative of the Commissioner to whom they can turn for information of any activity of the Department, or to complain of any matter which needs to be called to the attention of the authorities. Likewise, in case of need in one bureau, the Assistant directly on the ground can make arrangements for help from another bureau, which formerly could not be done without delay and reference to the Commission itself.

Already the system of having in each of these principal cities of the State a responsible representative of the Commissioner is showing excellent results and the people in the localities served by those offices are greatly pleased at their ability to make direct and immediate contacts with the Department.

BUREAUS

The following bureaus, each under the supervision of a responsible director, were established:

Bureau of Inspection.
Bureau of Workmen's Compensation.
Bureau of State Insurance Fund.
Bureau of Industrial Relations.
Bureau of Research and Codes.

Each bureau has such divisions as are set forth later in this report. Under the former organization there were ten independent bureaus, each under a separate head, and with no effective means for cooperation. Some of the bureaus had functions so closely related, and in some respects overlapping, that they could have been and should have been combined. An example of this was the Bureau of Inspection and the Bureau of Boilers and Explosives. Each was under a separate head, and each had its own set of inspectors who went about through the State without reference to the others. Likewise, the preparation of Industrial Code rules to amplify and supplement the Labor Law and to prevent accidents and preserve life and health, was carried on in a bureau separate and distinct from the more distinctly research divisions such as the Division of Industrial Hygiene and the Bureau of Women in Industry. These research divisions likewise were entirely independent of each other. Here was a great lack of corelation, and the contacts between these divisions could only be effectively made through the Commission itself as occasion arose. Consequently a consistent and coördinated program could not be carried through. This has been rectified by placing them all together as divisions in one bureau.

The same thing is measurably true of the old Bureau of Mediation and Arbitration and the Bureau of Employment. An employment office, in close touch with the industries in its locality, might become aware of a strike or threatened strike, but felt no responsibility to report that fact to the Bureau of Mediation and Arbitration, which was independent of it and supervised by a different commissioner. And yet by placing these two activities in one bureau under the same head, it is found that each can be of great assistance to the other by pooling information relative to industrial conditions and by making use of common contacts.

The bureaus thus established have the following divisions:

Bureau of Inspection:
- (a) Division of Factory Inspection.
- (b) Division of Mercantile Inspection.
- (c) Division of Homework Inspection.
- (d) Division of Boiler Inspection.

Bureau of Workmen's Compensation:
- (a) Division of Claims Examination.
- (b) Division of Medical Examination.
- (c) Division of Self-Insurance.

Bureau of State Insurance Fund:
- (a) Underwriting.
- (b) Accounts.
- (c) Claims Adjustment and Medical.
- (d) Safety Engineering.
- (e) Actuarial.

Bureau of Industrial Relations:
- (a) Division of Mediation and Arbitration.
- (b) Division of Employment.
- (c) Division of Aliens.

Bureau of Research and Codes:
- (a) Division of Industrial Codes.
- (b) Division of Women in Industry.
- (c) Division of Industrial Hygiene.

The work of each bureau will be discussed under the appropriate head, and is also discussed more in detail by the bureau heads in their separate reports, submitted herewith and to which reference is made.

FINANCES

Perhaps the outstanding feature of the present organization is the great reduction in the expense of maintaining the Department.

The revised Labor Law contained a provision reappropriating the balance of unexpended appropriations made to the former Industrial Commission for the fiscal year ending June 30, 1921. This reappropriated balance was made in a lump sum to carry the Department until the end of the fiscal year, June 30, 1921. The former Industrial Commission had requested of the last Legislature deficiency items totalling $85,300 to carry the Department along to the end of the fiscal year ending June 30, 1921. This was in addition to the appropriation that had already been made of $2,380,222.86. Of this sum $1,900,000 in round figures was for personal service.

By reorganizing the work and by not filling unnecessary positions that became vacant, and otherwise effecting economies, we completed the fiscal year without the need of the $85,000 deficiency that had been requested, and even turned back into the State Treasury after all expenses had been paid, more than $150,000.

For conducting the Department for the current fiscal year, commencing July 1, 1921, the Legislature by Chapter 340, Laws of 1921, appropriated the sum of $1,500,000, and provided that not more than $1,200,000 should be used for personal service. That law also provided that the Commissioner should submit a schedule showing the manner in which such moneys were to be expended, which would become effective when approved by the Governor, the Chairman of the Senate Finance Committee and the Chairman of the Assembly Ways and Means Committee.

Pursuant to Chapter 340, the Commissioner submitted such a schedule, which included salaries and temporary services totalling $1,200,000, and for maintenance and operation, other than personal service, $300,000, and such schedule was duly approved and filed with the Comptroller.

In order to bring the expenditures of the Department within its appropriations, it was necessary on June 30 to reduce the force of employees by a considerable number. We had proceeded slowly with the reorganization of the work until July 1 and followed the policy of dropping employees prior to that time who were not performing any useful service, and whenever a vacancy occurred it was not filled unless for a special reason. Thus by this means the payroll of the Department became considerably reduced before the new appropriation took effect.

All persons who were to be dropped on June 30th were notified on June 15th and given two weeks' leave of absence with pay in order to permit them to seek other employment.

During the year prior to my assuming office, the average number of employees actually on the payroll of the Department was 1070. From April 15th, when I took charge, to June 30th, the end of that fiscal year, the average number was 1019, showing an average reduction of 51 employees. However, from July 1st on, the average number of employees was 711, a reduction from the previous year of 359.

Owing to the faulty accounting methods in practice in the Department previously, I was unable to ascertain the monthly expenditures for any particular month. The only method possible was to take the total expenditures for the year and divide by 12 to get the average. This does not give an entirely true picture, for as we have seen the expenditures for the last two and a half months were very considerably lessened. But taking this general average, we have a monthly expenditure, during the fiscal year ended June 30, 1921, of $189,972.65.

Since July 1, 1921, under the present appropriations, our expenditures per month have been as follows:

July, 1921	$117,507 98
August	117,550 15
September	114,980 17
October	119,257 49
November	118,414 23
December	118,235 87
Total for six months	$705,945 89

Thus, unless unforeseen circumstances arise with unexpected demands for expenditures, we will complete the present fiscal year well within our appropriation.

The requests for appropriations made by the former Industrial Commission, submitted to the last Legislature, for conducting the Department for the current fiscal year totalled $2,878,205. Instead of this appropriation, we received an actual appropriation of $1,500,000, which indicates a saving over the amount requested of $1,378,205.

This reduction in personnel and curtailment of expenditures has been accomplished in my judgment without any appreciable loss of efficiency anywhere in the Department, but with an actual increase of efficiency in some places.

I desire to take this occasion to commend the zeal and energy with which the work is being accomplished by the present force. Almost without exception they are working hard and faithfully to keep the work of the Department up to the splendid standard they are now maintaining.

There is submitted herewith a detailed statement of expenditures for the fiscal year ended June 30, 1921. (See Appendix 2.) There is also attached hereto a complete payroll of the Department as of July 1, 1921. (See Appendix 3.)

Section 77 * of the Workmen's Compensation Law requires that the total cost of administering the Compensation Law shall be assessed against all compensation carriers and paid over to the State Treasurer. Some time after I assumed charge of the Department, I discovered that no assessment had been laid against the carriers for the fiscal year ended June 30, 1920. Work was immediately commenced to gather the data of expenses and the amounts of compensation paid during the year by each carrier, and thereupon on September 1, I issued an order levying an assessment against all carriers, including the State Fund and self-insurers, amounting to $566,177.81 pro rata, based upon the amount of compensation payments of each. These assessments have been in large part collected by now, some few items only being in dispute, and I have turned in to the State Treasury the sum of $557,367.39 up to the present time. (See Appendix 5.)

I submit herewith a copy of the order and statement for the assessment of the cost of administering the law, issued September 1, 1921. (See Appendix 4.)

The figures are practically complete now for the assessment for the fiscal year ended June 30, 1921, and an order to that effect will very shortly be issued.

INSPECTION

Efficient law enforcement depends upon efficient inspection. The report of the director of the Bureau of Inspection submitted herewith gives the details of the inspection work for the fiscal year. It has been a year of large activity judging by the number of regular and special inspections, and has been productive of good results.

An examination of the work of the individual inspectors, however, showed that all of the inspectors completed their regular annual inspections a considerable time in advance of the end of the fiscal year. The great reduction of regular inspections beginning in March and extending to the end of June, and the corresponding increase in the number of special inspections during that time is conclusive evidence to my mind of the fact that as the inspectors completed their regular inspections it was necessary for them to find something to occupy their time, and so they made many special inspections. These special inspections are not wholly productive of good results and they are too apt to become productive of irritation.

Upon this showing it was apparent to me that there was a considerably larger force of inspectors than was necessary properly and evenly to administer the law. Upon the basis of these figures, therefore, I directed a considerable reduction in the number of inspectors.

The State had formerly been divided into nine supervising inspection districts, each with a supervising inspector and staff and

---

* Section 77 renumbered § 126 and amended by ch. 615, L. 1922.

files, five of which were in New York City and Long Island, the remaining four supervising districts being up-state with headquarters at Albany, Utica, Rochester and Buffalo. In reducing the inspection force, I was convinced that better results would be obtained at less expense by a more centralized system — by reducing the number of supervisory districts. Accordingly, I directed a reduction of such supervising districts to seven, four to be comprised in Greater New York, Long Island, Westchester and Rockland counties. These latter counties being in much more direct communication with New York City than with Albany, the work can be much more readily supervised from the New York office and at the same time the change will meet in large measure the convenience of the people residing in those counties. In the upstate territory, the Utica office was abolished and the work redistributed between the Albany, Rochester and Buffalo offices. At the same time I gave directions for the supervising inspector in Rochester to spend at least one day a week in Syracuse at the offices of the Department there, for the convenience of people in that city and surrounding places who find it more convenient to go to Syracuse than to Rochester.

While the figures of inspections for the period subsequent to July 1 are not properly a part of this report, it is evident from my examination of the work that the regular work of inspection will be entirely completed well within the fiscal year, notwithstanding the reduction in the inspection force.

A number of improvements in methods have been inaugurated. As an example, I might cite that the old practice of requiring the inspectors to make out new inspection cards for every building entered each year has been modified. This inspection card contains a full description of the factory building, a miniature plan of it, details of exits, sanitary conveniences, etc. Much of the inspectors' time was consumed in making out such cards.

Now the inspector has last year's card with him when he inspects a factory, and if no substantial changes have been made, he returns the card to the supervising inspector with a statement to that effect. Since in the majority of cases no physical changes have been made in the buildings, a vast amount of time is saved and the records of the Department are not loaded up with thousands of unnecessary and bulky papers. Of course, if changes have been made, the card is corrected to conform, or a new card is made out, so that at all times we have in the Department a factory building card that accurately describes conditions in every factory in the State.

For years we have been hearing of duplicate inspections and the subject has been frequently discussed in the Legislature. Notwithstanding, however, such general condemnation, I found a considerable amount of duplicate inspection was still in effect in the Department. Upon personal visitation to some establishments, I found that often two and sometimes three inspectors from the Department had made separate inspections of the same plant, and for the most part these were small and relatively unimportant establishments, employing very few persons.

The places where such duplications existed were for the most part mercantile establishments having a small amount of factory work done in connection with them, such as tailoring establishments, bakeries and lunchrooms, automobile repair shops and accessories plants. In each of such class of establishments it was the regular practice to make an inspection by a factory inspector and also by a mercantile inspector. Neither inspector looked out for the work of the other; it was entirely uncoordinated; and both inspectors might happen to visit the same establishment the same day. Neither knew what orders were issued by the other, and did not try to find out. If the establishment happened to have a boiler generating fifteen pounds of steam or more, then in addition to these two first inspectors a third inspector came to inspect the boiler.

This practice I found to be very extensive, leading to literally thousands of duplicate inspections. The situation was in my mind wholly unjustifiable, and I took steps to eradicate the difficulty. Under the present practice no factory and mercantile inspectors inspect the same establishment. The mercantile inspector must look after any incidental factory work done on the premises of any store he visits. Likewise, a factory inspector visiting a bakery also looks after the mercantile work connected with it.

Not only does this cut down a large number of absolutely unnecessary inspections, but also it eliminates the danger of conflicting orders, which I found were sometimes issued.

The work of the Inspection Bureau has been organized into four divisions, the division of factory inspection, under direct charge of a chief factory inspector; a mercantile division, under the chief mercantile inspector; a homework inspection division, under the direction of the chief homework inspector, and boiler inspection division, under the chief boiler inspector. The latter division was formerly an independent bureau under a so-called chief engineer. The work of each of these divisions is well up and is being thoroughly done and efficient results are being obtained.

Formerly the inspection of explosive magazines was under the jurisdiction of the boiler inspection bureau, and the boiler inspectors enforced provisions of law relative to explosive magazines. This work has been transferred to the factory inspectors and the mine inspectors under the direction of the chief factory inspector. The work of the boiler inspectors requires highly trained men whose time should not be devoted to the more or less routine work of inspection of explosive magazines. Moreover, the factory inspectors are in closer touch with the industries where such magazines are maintained. Many explosive magazines are maintained in connection with mines and quarries. Formerly, while the mine inspectors inspected the mines and quarries they could not inspect the explosive magazines but a boiler inspector was required to make a special trip for that purpose. Under existing regulations mine inspectors must inspect all explosive magazines maintained in connection with mines or quarries.

WORKMEN'S COMPENSATION

The importance of the Bureau of Workmen's Compensation cannot be overestimated, for through this bureau is carried out the administration of that very beneficent statute which provides for the payment of compensation to the thousands of workmen injured at their work every year or the dependents of those whose accidents result fatally.

No one today will seriously gainsay the importance and usefulness and the intrinsic justice of the Workmen's Compensation Law. Controversial as it was at the time of its enactment and a law to which a large number of persons did not give their full confidence, it has become firmly established not only as a part of our judicial system, but as an accepted part of our industrial system. Few, if any, will be found today who would lay it aside and return to the old system of the rule of negligence with its protracted and tedious court procedure, its uncertain burdens and its uncertain and all too frequently denied benefits.

Today the employer so well knows and understands his obligations and their cost that he plans in advance to absorb it in his industry and the burden of relieving the distress of industrial accidents is carried over into the cost of production and so spread as to fall evenly and without distress, while on the other hand, the relief from distress, nay, sometimes actual destitution, is certain and for the most part prompt.

The great advantages of it seem to me to be, first, a definite and fixed liability upon the employer, who represents the industry, second, a certain method of providing for the security of the payment of compensation to those entitled, and third, a simple and inexpensive procedure for obtaining the compensation when it becomes due.

Through the agency of an administrative body, without formal or technical rules of proof and with an informal procedure, the services of attorneys on behalf of injured men or their dependents have been for the most part unnecessary and in comparatively few instances are they resorted to. The injured person is for the most part his own lawyer and he is generally a good one, and with the aid of the referee he has little difficulty in obtaining his just rights.

New York State, almost alone of the 42 States in which workmen's compensation laws are now in effect, has maintained the system of closely supervised claim adjustment. The system has always proceeded on the theory that the State must be in contact with the claimant and all his dealings with the employer or insurance carrier at every stage of the proceedings. The tendency of amendments to the law has heretofore been to make any real contact between the employer and his injured workman most difficult of realization and such contacts had to be made through the Department. The inevitable result of this trend was to slow down the process of claim payments and to increase the machinery of the law.

Discerning this tendency and realizing that it was foreign to the fundamental purpose of the law, Governor Miller pointed out in his message to the last Legislature that the law should be amended so as to make compensation payable in the same manner as wages. This called for a more simple and direct method of dealing between the employer or his insurance carrier and the workman. To carry out the Governor's recommendations a law was enacted (L. 1921, ch. 540, amending § 25) that established new procedure with two principal objects, first, prompt payment of compensation as soon as due, and without waiting for any formal action of the Department, and second, an opportunity in every case for the claimant to appear before the Department before the closing of any claim.

This law, of course, made a distinction, as was necessary, between the uncontested claim for compensation, and the contested claim. But if the facts of the accident are known, as they are in most cases, and the wage rate is agreed to, there would seem to be no good reason why the first payment of compensation should not be made as soon as due and the payments regularly kept up thereafter until the closing of the case. Experience has demonstrated that the final closing of a compensation claim must be adequately safeguarded. Under the old direct agreement provision of 1915, the Department came into contact with the claim at the beginning of payments, but the abuses that arose under that law were all due to the fact that there was no requirement for any close supervision of the claim at the time of stopping payments.

Under the present system of a hearing on closing, all questions can be examined into before the final closing or last payment, and if an error was made in the initial payments, it can be rectified at the final hearing, but the claimant in the meantime has been receiving money upon which he and his family can subsist.

Under the new law, in order to stimulate employers and carriers in making prompt payments of compensation without waiting for an award, it was provided that the employer or insurance carrier must promptly notify the Commissioner either that compensation is being paid or that the right to compensation is controverted. If the right to compensation is not controverted, compensation becomes due on the twenty-first day of disability, that is to say, one week after the expiration of the 14-day waiting period, and if any payment of compensation is not paid within 10 days after it is due, additional compensation to the extent of 10 per cent is due as a penalty and is payable to the claimant. It was further provided that where a claim is controverted and the insurance carrier or employer without just cause requests an adjournment $5 may be assessed against it for each such adjournment, which charge shall apply against the cost of maintaining the Department.

The new law went into effect on July 1, 1921, which was immediately after the close of the fiscal year upon which we are now reporting, and the figures in the report of the Bureau do not reflect in any way the results of the new law.

New Provisions of Compensation Law

At the last session of the Legislature important amendments were made to the Workmen's Compensation Law, chief of which was the requirement that the employer or his insurance carrier should promptly pay compensation when due, and continue thereafter unless the claim is contested and notice to that effect is given to the Industrial Commissioner. Failure to pay such compensation when due or to file a notice of contest makes the employer or insurance carrier liable to a penalty of 10 per cent, which is to be added to the compensation and paid to the claimant.

Whereas the whole structure of the law formerly was such as to discourage payment of compensation prior to an award after a hearing, the present provision encourages prompt payment within 10 days after the right to compensation arises. It must be borne in mind that the vast majority of claims are not contested. There could be no successful contest. How then to get compensation into the hands of the injured workman at the time when it is most needed, that is during the early period of disability, and to continue it thereafter during the continuance of disability, was the problem. The new law has been affording very substantial relief along those lines. The law only went into effect on July 1 last, but already we find 56 per cent of all claims being paid in advance of an award and without contest. And we find 19 per cent being contested on some minor ground, such as exact wage rate or date of return to work, and these contests are adjusted for the most part without formal taking of testimony. Thus, then, 75 per cent of all claims are being paid without the formal hearing and long delays incident to the old system.

Of course if such payments in advance were to result in claimants receiving less than the law entitles them to, the system could not be tolerated. But the law provides that no case can be closed without an opportunity to the claimant to appear and be heard, and further that at any time during the payment of compensation he may be heard if he requests it. On making the final payment, or what he believes should be the final payment, the employer or carrier gives notice to the Commissioner and a duplicate of such notice is sent to the claimant with a notice of hearing when he may show that he is entitled to further compensation if that be the fact. If a workman, however, has entirely recovered, is receiving his regular wages and has been paid the full compensation, he is not obliged to come to the Department for a perfectly useless hearing at the expense of a day's wages and carfare, only to be told what he already knows, namely, that he has received all the compensation to which he was entitled. This was a very frequent occurrence before, happening many times every day and exciting criticism and disgust with the law, and was thoroughly objectionable.

Compensation is, therefore, now paid as nearly like wages as it is possible to make it, which should be the aim of all compensation administration.

Co-operation in Administration

The coming into effect of the new law and the necessity of changing the forms and procedure to conform to it, made it seem advisable to the Commissioner to invite the co-operation of all parties directly interested in its operation. Accordingly, soon after I took office I called a conference and invited to participate in it the members of the Industrial Board, the representatives of all insurance carriers, both stock and mutual, and the State Fund, as well as self-insurers, employers' associations and the Federation of Labor. Believing firmly that co-operation is the best way to achieve results and realizing that an economical and efficient administration was to the interest of all, I called upon the conference to aid us in our task. As a result a planning committee was appointed representative of all the interests.

This committee suggested the appointment of three committees of seven each, one to revise the many forms in use in proving claims and to simplify them; one to consider internal office administration, including the method of receiving, examining, hearing and filing of claims and notices; and one to consider rules of procedure. The most available men, expert in their several lines and technically qualified, were drafted from some of the insurance companies and self-insurers. The workingmen were also represented on these committees. The committees went immediately to work and rendered most difficult and painstaking service, surveying their problems and then seeking the remedies. From these committees came suggestions, drafts of new rules, forms, etc., and all received the most careful thought of the Commissioner. Rules of procedure have been adopted by the Industrial Board based upon the report of the Committee and upon the experience of the members of the Board.

Attached hereto are the Rules of Procedure adopted by the Board. (See Appendix 6.) No rules of procedure were in effect prior to these rules. The procedure not only was informal, as it should be, but it was not uniform and was apt to be according to the whims and ideas of the individual referees.

The new forms drafted were much briefer and more understandable than some of the old ones. They were also brought up to date to conform to the new law and new procedure. The Committee on Office Management also reported recommendations for important administrative changes designed to expedite the work and to maintain efficiency with a reduced force.

The work of these various committees was carried out in a most commendable spirit. All working with one end in view, to improve the service and give New York a model of administration, it was to be expected that divergent views would be expressed. However, it is worthy of note that the recommendations finally submitted were all unanimous and accepted by all parties. At no time was there evident any disposition to attempt to take any advantage, but a broad spirit of fairness pervaded their councils.

The Commissioner esteems the Department most fortunate in having secured the services of the splendidly equipped men who gave of their time and effort to aid us. I desire to acknowledge the great service rendered by all. Not the least of the benefits was the better understanding of the points of view and the problems of all the parties under the law.

Recommendations

While it is probably true that the Workmen's Compensation Law of this State is in many respects the model and the most liberal statute of any, still there are provisions that should be amended to meet present conditions.

The joint committee of the Legislature that was appointed a year ago to recodify the Labor Law was continued in power by the last Legislature and directed to examine the Workmen's Compensation Law and to recommend such changes as seemed necessary.

This committee, commonly known as the Knight Committee, has been at work during the past summer, and this Department has given such assistance as it could. The Commissioner and members of the Board have met with the committee frequently and have gone over in detail the various provisions of the law and have suggested many amendments.

While the form and structure of the law itself could be changed a good deal to give it a more logical arrangement, it seems to us that it would be unwise to disturb many of the provisions of the law that have been the subject of litigation in the courts and whose meaning has become well settled by court decision. It is our strong recommendation, therefore, that the old form of the law, and the old language of the various sections be retained so far as seems possible, changing the language only where there is a definite reason therefor.

One of the most illogical provisions of the law is that relating to permanent partial disability, by which term is meant the loss or loss of use of a member, which loss is permanent but not wholly disabling. Compensation for such dismemberments is allowed for definite periods of time in accordance with a fixed schedule in the law. This schedule does not take account of the period of complete disability generally referred to as the healing period. Such healing period differs very greatly in different cases. The normal healing period, where the wound heals by primary intention and without infection, is not by any means the rule, and we have very frequent cases where the normal healing period is greatly extended by complications arising.

The amount of compensation paid, however, would be exactly the same if the end result is the same. This works greatly to the disadvantage of the person whose healing period is lengthened by infections or other complications. If the schedule of disability compensation is regarded as in the nature of damages to compensate the worker for his future loss of earnings by reason of the permanent loss of a member, then it would seem logical and just that the temporary period of total disability or healing period should be compensated in addition to the number of weeks represented in the schedule.

I earnestly recommend that the law be amended to provide such additional compensation.

I likewise recommend that the law be strengthened in regard to the prosecution and penalties for non-insurance. One of the great evils under the Compensation Law is the neglect or the refusal of the employer to insure his liability. By lessening his cost of operation he acquires certain competitive advantage over his neighbor who complies with the requirements of the law, and when the inevitable accident occurs it finds him unprepared to pay the compensation demanded by the law. Sometimes he finds himself driven into bankruptcy or put out of business by a death claim, when observance of the law would have resulted in placing that burden upon the great resources of the State Fund or other insurance carrier.

One of the difficulties in prosecuting such employers is to prove affirmatively that they are uninsured. I recommend that the law be amended to provide that failure to inform the Commissioner within 10 days after demand of the facts with regard to his insurance shall be presumptive evidence of such employer's non-insurance.* We could then prosecute such employers and put the burden on them of showing that they had complied with the law. I also recommend that all fines collected in non-insurance cases be paid to the State Treasurer for the benefit of the fund held by him for paying compensation to persons suffering a loss of member after having previously lost another member.† That fund, now made up by payments of $100 by carriers in all cases of death in which there is no person entitled to receive compensation, is wholly inadequate to meet all the demands made upon it. The State has assumed the obligation of providing compensation payments for life to persons who having previously lost one member subsequently lose another member and thereby become permanently totally disabled. It would be disastrous indeed if the pitiable beneficiaries of this special fund should in later years find themselves deprived of the compensation to which they are en-

---

*Amended by L. 1922, ch. 615, § 51.
† Amended by L. 1922, ch. 615, § 52.

titled by reason of the insolvency of the fund out of which it is paid. The Actuary of the Department informs me that it will require payments of more than $400 in each no-claim death case to bring this special fund up to the point where it can carry all of the necessary claims to maturity.

I recommend, therefore, that in every fatal accident case in which there are no dependents the employer or carrier be required to pay $500 to this special fund, instead of the present $100 payments.* At the same time, I recommend that the present payment of $900 in all such cases, for a special fund out of which additional compensation is to be paid to injured persons undergoing vocational rehabilitation, be reduced to $500. It is estimated that payments of $500 into that fund will provide sufficient funds for that purpose, at least for the present.

Longshore Workers †

Originally intended to be brought under the Compensation Law, all longshore† and other maritime workers were taken out from under the jurisdiction of the Compensation Law by the decisions of the United States Supreme Court in *Southern Pacific Co.* vs. *Jensen* (244 U. S. 205), and *Knickerbocker Ice Co.* vs. *Stewart* (253 U. S. 149). It has been now definitely held by the Supreme Court that the States cannot make rules of liability for employers engaged in carrying on maritime occupations.†

But it has not been held that the States cannot provide an elective system of compensation when employers and employees both desire to submit to the State Law. I believe that such an election if exercised by both the employer and his workers would be sustained by the courts. It is my information that the vast majority of the harbor workers would much prefer the Compensation Law to the admiralty courts. We are told also that many employers would similarly come under the State statute, if the Board were authorized to make awards in such cases.

I recommend, therefore, that where employers and their employees engaged in maritime employments elect to come under the Compensation Law, the Industrial Board be authorized to make awards of compensation, and that the State Insurance Fund and other carriers be authorized to insure such liability.‡

Such an amendment will, I feel sure, result in bringing most, if not all, the maritime workers in the State under the practical operation of the Compensation Law, and give to them all the benefits secured to other workers thereby. This would apply alike to workers in and about the harbor and those engaged in river traffic, but also to the lakefront workers in Buffalo and employees on the Barge Canal.

It has been argued that such voluntary submission would not protect the employer from law suits where the employee had a good cause of action for negligence. It is well to remember, however, in that respect that, prior to the decision in the *Jensen* case by the United States Supreme Court, it had been held that there was concurrent jurisdiction between the State Law and the admiralty courts, and that an employee could elect which jurisdiction he would accept, and during that entire time I know of no instance of an employee's electing to pursue his remedy in admiralty in preference to the Compensation Law.

---

* Amended by L. 1922, ch. 615, § 15, subds. 8 and 9.
† For the present status of longshoreworkers see note on p. 212.
‡ This provision was adopted in § 113 of the recodified Compensation Law, ch. 615, L. 1922.

From that experience we might well expect such a permissive or elective coverage to be generally adopted, and the satisfactory conditions prior to the decision in the *Jensen* case to be reestablished.

It is not improbable, on the other hand, that the Supreme Court might hold such elective coverage by the employer and employee to be exclusive and to operate to bar any action in admiralty. In the recent case of *Grant Smith-Porter Ship Co.* vs. *Herman R. Rhode,* decided by the United States Supreme Court in January, 1922, the court held that where the employer and employee had jointly submitted to the Oregon Industrial Accident Fund, and where the employment was maritime, the injured employee could not maintain an action in admiralty.

Canal Employees[*]

One effect of the decisions of the Supreme Court has been to deprive employees of the State engaged in navigating or operating the Barge Canal of any remedy for injuries.

All employees of the State engaged in hazardous employments are insured for compensation in the State Insurance Fund. The fund is not permitted by law to pay any benefits other than such as arise under the Compensation Law. These employees of the State have no remedy in admiralty, for the State itself cannot be sued.

An amendment which would permit the State Fund to assume such liability and to pay awards of compensation in such cases, would entirely clear up this situation and would make certain the payment of compensation to injured employees of the State, notwithstanding their employment may be of a maritime nature.

Estoppel

I further recommend that where a carrier has collected a premium for insurance of employees under a policy that includes coverage under the Workmen's Compensation Law, it be estopped from denying liability under the Compensation Law on the ground that the employment was not hazardous or was not carried on for pecuniary gain.[†] We frequently find that insurance companies issuing joint compensation and liability policies and selling insurance to employers having four or more employees, permit such employers to believe they are under the Compensation Law until an accident occurs and then the company asserts that it is not under the Compensation Law, because the business is not hazardous or is not carried on for pecuniary gain. This seems a most unfair practice. I believe that a carrier should not be permitted to deny his liability under such circumstances.

---

[*] For changes in the status of canal employees since June 30, 1921, see note, on p. 212.

[†] A provision carrying out the above recommendation was adopted in the recodified Compensation Law, § 55, ch. 615, L. 1922.

Such a provision might also have an effect upon the maritime employments above referred to, and operate to stop the carrier from objecting to a claim on the ground that the employment was maritime.

Loss of Hearing

Although the Compensation Law makes definite provision for loss of members and loss of vision, it has never taken account of loss of hearing. Fortunately cases of loss of hearing are extremely rare, yet when a workman by reason of an accident does lose the hearing in both ears he has sustained a most serious vocational loss and will be greatly handicapped in most employments. Accordingly, I recommend that loss of hearing of both ears be compensated in some suitable amount.* Because of the vast difficulties in administering the law with regard to loss of hearing of only one ear, and as there is no suitable method of measuring the vocational loss for such an injury, I do not recommend a definite provision for loss of hearing of one ear. So many people are wholly or partially deaf in one ear that without careful physical examinations before employment it would be almost impossible to determine whether the loss was due to an accident or antedated it.

Subcontractors

I recommend that, if a feasible way can be found, contractors be held liable for compensation to employees of a subcontractor injured on the job, unless the main contractor sees to it that his subcontractor is properly insured under the Compensation Law.† In many cases small contractors, especially in painting, carpentry, excavating and trucking, do not carry compensation insurance. If the main contractor is made liable for compensation unless the subcontractor is properly covered, I am satisfied that he will take good care to require evidence of insurance before giving out a subcontract.

Other minor amendments have been submitted to the joint committee for consideration in drafting their revision of the law, but will not be specifically mentioned herein.

Medical Treatment

Originally the Compensation Law provided that an employer must furnish his injured employee medical treatment for sixty days after injury. Recognizing that in many cases sixty days was wholly inadequate, the law was amended to provide that medical treatment might be extended beyond sixty days if ordered by the Board. The result of that amendment was to extend medical treatment in practically every case where the process of healing extends beyond sixty days. The best practice among insurance carriers and self-insured employers is to give medical treatment unlimited as to time. This being the substantial rule, it seems logical to amend section 13 by removing the sixty-day limitation, which means nothing in most cases, but which is still resorted to as a subterfuge in a few cases. It seems only fair and logical that if an employee is injured the employer should furnish medical treatment for so long a time as is required to recover from such injury.*

---

* This recommendation was incorporated in § 15, subd. 3 of the Compensation Law, ch. 615, L. 1922.

† Adopted in the recodified Compensation Law, § 56, ch. 615, L. 1922.

Great difficulty has been experienced in connection with the payment of physicians' bills by employers or insurance carriers where the physician has not been directly furnished by the employer or the insurance company. I believe that if the physician renders adequate and competent medical treatment, and his charges are reasonable, he should be paid for his services. The physician, however, must understand that if he is to receive payment from the employer, or insurance carrier, he owes them an obligation to report promptly the nature of the injuries and the condition of the injured man.

I recommend, therefore, that the law be amended to require a physician promptly to report to the Commissioner and to the employer or insurance carrier the facts with regard to the extent of disability of an injured workman who is being treated by him.*

SELF-INSURANCE

One of the three methods by which an employer can comply with the law and secure payment of compensation to his employees is by becoming what is commonly known as a self-insurer. In order to avail himself of the right to be a self-insurer an employer must certify to the Commissioner his financial ability to pay compensation for himself, and deposit securities of the kind described in section 13 of the Insurance Law in an amount in the discretion of the Commissioner. Under the rules of the Department in regard to self-insurance, the amount of security to be deposited by a self-insurer is regulated according to what would have been his premium for insurance for six months in the State Insurance Fund with the proviso that no deposit of less than five thousand dollars will be accepted nor shall more than fifty thousand dollars be required in any case for the original deposit. Thereafter, and at six months intervals, the Commissioner has the right to readjust the amount of securities on deposit according to the amount of outstanding liability for unpaid compensation, and he has the right at any time to sell any such securities on deposit with him in the event of the non-payment of an award of compensation and to pay the award out of the proceeds of such sale.

---

* Both these recommendations are covered by amendments to section thirteen of the Compensation Law (ch. 615, L. 1922).

The result of the semi-annual valuation of claims has been to require the deposit of larger amounts of additional securities.

The number of self-insurers has been constantly growing in this State and is likely to continue to grow. I am of the opinion that self-insurance furnishes the most satisfactory method of taking care of liability of any of the methods prescribed in the law so far as an employer of ample financial means is concerned. I am utterly opposed, however, to extending the self-insurance privilege to employers of small means or of doubtful business permanency. While I am aware that this policy may be open to criticism on the ground that it appears to favor the large and wealthy concern as against the smaller, that criticism is inherent in the system itself. I do not think the question should be approached from the standpoint alone of the desire of the employer, but, so far as this Department is concerned, it must be considered solely from the standpoint of what is best for the injured employees and their dependents. Financial stability and prompt payment of compensation are essential in self-insurance. In fact, it is very largely this same reason that makes necessary insurance of compensation liability at all. Such insurance operates to add to the law imposing a liability the financial soundness of the State Fund, or an insurance company, so that an injured workman or his dependents need not be dependent for their compensation upon the problematical ability of the employer to pay.

Self-insurance is undoubtedly a great stimulus to improve methods of accident prevention, and medical care and treatment of injured workmen. The cost of accidents falling directly upon the employer, he is more apt to adopt means and methods to prevent them and he has a direct financial interest in getting his injured workmen back to work in the shortest time and with the best results. Furthermore, the employer does not lost contact during the compensation period with his injured workmen as would be the case were he insured. The injured employee receives his compensation from the employer in precisely the same way that he receives his wages. If the employer's relations with his workmen are satisfactory, they are bound to continue satisfactory in case of injury, and such relations are worth going a great way to preserve.

I desire to invite your attention to what I regard as a defect in the law in regard to self-insurance. I believe the provision requiring the deposit of securities to be of the kind described in section 13 of the Insurance Law is too inelastic. Since the purpose of deposit of securities is to have security of a liquid nature, it would seem to me that every purpose of the law would be subserved by allowing the deposit of securities of the kind described in the Banking Law for investments by savings banks and trustees. As it operates, many employers have ample securities in their treasury of the kind permitted to savings banks for investment which they have to sell and convert into the kind of securities now required by law. This is always done at a financial sacrifice, and it is impossible at the present time for them to realize anything like the rate of income on their deposits with the Commissioner that they could realize upon the same money held in their business. I recommend, therefore, that subdivision 3 of section 50 of the Compensation Law be amended so as to permit the deposit of securities of the kind permitted for investments by savings banks, instead of the present provision that such securities be of the kind described in section 13 of the Insurance Law.*

I further recommend that all municipal corporations, counties, villages, towns and other political subdivisions be permitted to become self-insurers, if they do not place their compensation liability elsewhere, without the necessity of furnishing a financial statement and without depositing securities with the Commissioner.† This is wholly unnecessary in the case of such public corporations. Inasmuch as they have the taxing power of the State back of them, there can be no question of their financial ability to pay compensation for themselves. This is the rule now followed by the Commissioner, but in the interest of justice I believe that it should be translated into law and not left to the discretion of the present or succeeding commissioners.

There has always, heretofore, been evidenced considerable curiosity as to who were self-insurers in the State. So far as I can learn there has never been a published list of self-insurers. I find no reason for any such matter being kept secret but, on the contrary, when such information is kept secret it always invites secret avenues for information without the knowledge of the head of the Department and may be made the basis of unfair competition by the recipient of the information. All such applications are matters of public record, and I have concluded, therefore, to append hereto a complete list of self-insurers in the State of New York as of June 30, 1921. (See Appendix 7.)

The amount of securities on deposit with the Commissioner to secure the right of self-insurance to various employers on June 30, 1921, was the sum of $8,416,725; $5,450,225 of this amount constitutes original deposits to take care of current liability, and $2,966,500 represents deposits made on account of actual outstanding liabilities.

STATE INSURANCE FUND

The reorganization of the Department and the separation of the administrative and judicial functions of the Department marked the end of one of the chief criticisms levelled against the State Fund. For years it had been a constant source of attack and complaint that the administration of the fund was in the hands of the very same Commission that had the entire responsibility for the awards of compensation against the fund. It was urged that the Commission responsible for the solvency of the fund would, perhaps unconsciously, favor the fund as against the workman. No case of such discrimination was ever disclosed, and the complaint was usually from the stock insurance carriers who were in active competition with the fund for business.

---

* Amended by L. 1922, ch. 615, § 50, subd. 3.

† The legislature of 1922 made every political subdivision of the State that had not already secured insurance, automatically a self-insurer (§ 50, subd. 4.)

As a result of these complaints efforts were made at various times to enact legislation taking the State Fund out of the Department, and either making it a separate Department or placing it under some other control.

Under the present organization, and as provided by law, the Commissioner alone is responsible for the administration of the fund, while the Industrial Board are solely responsible for the awards made against the fund. Their relation to the fund is much the same as their relation to any other carrier, and there cannot exist even a suspicion of favoritism of the fund.

As a matter of actual fact, however, the State Fund has always assumed the most liberal policy toward the injured workmen entitled to benefits to be paid from the fund. When it is considered that under the law the State Fund has no appeal from a decision of the Board, it will readily be understood that the tendency might be expected to be one of undue liberality rather than otherwise.

The complete report of the fund, including financial statement, appears on page 183.

The fund continues to be one of the leading carriers of compensation insurance in the State. This is true, notwithstanding the disclosures of some loose practices under its former administration which were brought to light in the public investigation made about two years ago. It was freely predicted that those disclosures and the effect of a public investigation would cause many policyholders to withdraw from the fund when their policy terms expired, and that the effect on the fund would be disastrous. While some policyholders did cancel, their number was practically offset by new business. The number of cancellations known to be due to the investigation was negligible.

Forceful evidence of the continued favor with which the fund is regarded by employers may be seen in the growth in the number of its policyholders. During the calendar year 1921 the net increase in policies in force was 1,451 and the number in force at the close of the year was 10,756. These figures may be compared with a net gain in 1920 of 903 and 9,305 policies in force at the close of the year. When we bear in mind that the Fund employs no solicitors and pays no commissions for the acquisition of business, such growth is a tribute to its fundamental soundness and its service and the low cost of its insurance.

One of the greatest difficulties we have encountered in the administration of the Fund has been the slow collection of premiums due. This is in part because the policies of the Fund are by law continuing or self-renewing, and have heretofore been written almost exclusively on a semi-annual basis. New policies are now being written on an annual basis very largely, and as rapidly as possible old policies are being changed over to an annual basis. This will obviate semi-annual billing, greatly reduce the expense of collections and will assure the Fund the premium necessary to carry the policy for a year.

Another consideration that has delayed collections of overdue premiums has been the provisions of Section 99 of the compensation law, which requires the Fund to certify to the Attorney-General all accounts in arrears for five days, and directing the Attorney-General to bring actions in the name of the People of the State of New York for their collection. It is a matter of simple business experience that accounts are rarely if ever paid in five days' time. This does not mean that the accounts are not good at all. It would be absurd to certify such accounts to the Attorney-General to bring court actions. This would absolutely clog the Attorney-General's office with unnecessary work and make the collection of accounts far too expensive. Ordinary business judgment would dictate that we should exhaust every reasonable business method of collecting slow accounts before beginning court actions. Prompt and vigorous following up of such accounts by employees of the State Fund would in my judgment yield excellent results.

Accordingly, I departed from the policy heretofore followed of certifying hundreds of cases to the Attorney-General, and appointed a legal assistant to the Manager of the Fund charged with the direct responsibility of getting after delinquent policyholders, and compelling them to pay their proper proportion toward the cost of carrying the compensation liability.

I feel constrained, therefore, to recommend an amendment to Section 99, to relieve the Attorney-General of the burden of collecting bills for the State Fund, but to permit the Fund directly to collect and sue for premiums due from its policyholders.* As most of the accounts are relatively small, a more general use of the municipal and other inferior courts should be made.

In making this recommendation no criticism is made or implied of the Attorney-General's office. We have always had very ready coöperation from that office. The point I wish, however, to emphasize is that the State Fund should conduct its collection work in the same businesslike way that any similar business organization would. Furthermore, at present the State receives no reimbursement for the expense to which the Attorney-General is put. Whereas, if the work is done through the State Fund representatives, the State will be fully relieved of all such expense, and it will be borne by the State Fund in the same way as all its other expenses.

---

* For the law as passed, see L. 1922, ch. 615, § 99.

I deem it my duty to point out that the State Fund has been greatly embarrassed in giving full coverage to its policyholders where there arises accidental maritime liability. The decision of the United States Supreme Court in the case of *Stewart* v. *Knickerbocker Ice Company* (253 U. S. 149), decided in 1920, seems to have finally held that workers whose contract of hire is maritime in nature, or whose duties are maritime at the time of injury, are not under the workmen's compensation laws of the various states, and it is beyond the power of Congress to delegate the power of such states to prescribe any such rule of liability for employers. The effect of this has been to place all such maritime workers outside of compensation protection and to throw them back into the old field of liability and suits at law or in admiralty. It not only was most unsatisfactory to the workers but has proven unsatisfactory also to employers. This is most particularly true of employers, only a small percentage of whose workers would come within the maritime rule or whose employees, as in many cases, would be engaged in maritime work for only a very small part of the time and under the compensation law the balance of the time. The ordinary insurance company can take care of the employer by issuing a policy which not only insures the employer against compensation liability but also against any accidental maritime or other liability. This, however, does not greatly benefit the workers for, unless there is actual liability due to negligence of the employer, the employee seldom receives anything when he is injured.

Particularly does this work hardship with respect to employees of the State who may be engaged in maritime work, such as those employed either on work of the canal at lock tending, etc., or on barges or boats navigating the canal waters or their terminal harbors. It likewise would apply to certain employees of the Conservation Department engaged in the protection of the shellfisheries. These employees if injured or killed cannot under the present state of the law be considered as coming within the scope of the Workmen's Compensation Law and, as they have no right of action against the State, they are forced to obtain relief by legislation and through the Court of Claims.

The situation so far as the State Fund is concerned could be greatly clarified by an amendment to the compensation law legalizing agreements between employers and employees to bring these employees within the provisions of the compensation law notwithstanding that their work may be of a maritime nature and permitting any insurance carrier, including the State Fund, to assume such liability and to pay any awards of compensation that might be made.* In this manner the State Fund would not only be permitted to assume liability for accidents to maritime workers of the State itself, and to pay awards of compensation made to them, but would also be enabled to give complete coverage to other employers of the State, some of whose employees are maritime and who jointly agree to accept the benefits of the Workmen's Compensation Law. This, I believe, would be a satisfactory solution of one of the most trying situations with which we have to deal in the administration of the compensation law.

---

* Amended by L. 1922, ch. 615, § 118.

Having had for the last two years, as member of the former Industrial Commission, the supervision of the State Insurance Fund, I have repeatedly called attention to the anomalous situation caused by the present roundabout and unsatisfactory method of appropriating monies out of the State Treasury for the maintenance of the State Insurance Fund and for the reimbursement of the Treasury for such expenditures after the close of the fiscal year. The actual net result is that the State Insurance Fund, as it properly should, pays the entire expense of its own administration. The requirement, however, for appropriating monies in advance operates to tie the State Fund to a hard and fast budget made up months in advance by the Legislature and without regard to or knowledge of the actual business conditions that may have to be met during the appropriation year. It has seemed to me that some method should be devised whereby the State Fund under a proper system of control would be permitted to pay its administration expense out of its own funds without in any way being a charge upon the State. I believe the State loses at the least calculation ten thousand dollars annually in interest on the monies that it advances to the State Fund for payment of its expenses, which interest could readily be saved to the State by such a system as that suggested.

I therefore recommend that Section 94 of the compensation law be so amended as to permit the State Fund to pay its expenses out of its premium receipts and other funds in its hands upon quarterly estimates submitted by the Industrial Commissioner and approved by the Board of Estimate and Control. Probably some limitation should be put upon the amount that could be spent in any one year. While it is generally estimated that in private insurance companies the expenses, including acquisition costs, run as high as 30 to 40 per cent of the premium, I believe the State Insurance Fund could be most efficiently managed on an amount not in excess of 15 per cent of its annual premiums.*

I further recommend that the provisions of the compensation law in regard to rating declaration of dividends, maintenance of reserves, and catastrophe surplus and associations for accident prevention be entirely revised, made more simple, and made to conform to the actual practices that prevail with respect to those matters rather than to some theoretical standard as they now do. These sections are technical in their nature and were constructed prior to the actual existence of the State Fund and before any business was done. They have proven themselves thoroughly unworkable and should be revised in accordance with the best practices prevailing.*

---

* For the law as passed see § 94, art. 5, of the recodified Compensation Law (ch. 615, L. 1922).

INDUSTRIAL RELATIONS

No subject in the whole field of industry is more important in these days than that of the relations between employers and workmen. It has seemed to me that the activities of the Department in this field have not heretofore been as fully developed as they should be nor sufficiently coordinated. Accordingly, I abolished as separate bureaus the Bureau of Mediation and Arbitration, the Bureau of Employment and the Bureau of Industries and Immigration, and established these activities within a single Bureau of Industrial Relations under a director. This bureau functions through three divisions corresponding to the former bureaus. Much has been done, however, to develop constructive plans for coordinating the work of the divisions. Under the director of this bureau has also been placed the work of the Department relating to public works, that is the eight-hour and prevailing rate of wages provisions in regard to public contracts.

Mediation and Arbitration

The work of the mediation and arbitration division of this bureau has been well done and has proved effective as far as it has been able to go. Under existing law, the services of the Department cannot go much further than the offering of the good offices of the mediators of the Department, and seeking to exercise moral suasion to bring together the two sides to the dispute. When they are brought together, an agreement most frequently follows. Such efforts, however, rest upon the good will and consent of the parties, and seem to proceed in no wise from a sense of public responsibility.

Occasionally the Department is called upon to act as arbitrator in such controversies. This differs from mediation in that arbitration follows only upon the submission of a controversy by both sides, they agreeing in advance to accept the findings and decision of the arbitrator. The number of actual arbitrations undertaken by the Department, however, is negligible, the effort apparently being by mediation to get the parties to select some outside arbitrator. The effect of this, whether intentional or not, is that the Department is not called upon actually to side with one party or the other in the given dispute, and so avoids giving offense to either side. At the same time it seems to me that this policy lacks somewhat of vigor and is more or less colorless.

The Commissioner is empowered by law to investigate the causes of strikes and lockouts, and undoubtedly he can delegate this authority to other officers of the Department. But with the manifold duties of administration, the Commissioner could give but scant time to the actual investigation of a dispute, if it involved the calling of witnesses and the taking of testimony. This power, under present conditions, could only be exercised in exceptional situations involving matters of great public interest.

---

* Amended by L. 1922, ch. 615, §§ 92, 95–97.

I am firmly convinced, however, that investigation and the turning of daylight into many industrial controversies can be of greatest benefit, and the force of public opinion, moulded and guided by the conclusions and findings of an impartial investigation, be made an important factor in bringing about the settlement of disputes and the establishing of right conditions in industry.

Compulsory arbitration, which is not arbitration at all but is fiat, will not solve our industrial difficulties. Such fiat is apt to be unsatisfactory and irritating not only to both sides to the dispute, but likewise to the general public. It will not in my judgment be an aid to production, nor to keeping men usefully employed and contentedly working.

Rather than attempt to ram our opinions down the throats of either capital or labor, we should seek by argument and by logical reasoning from facts ascertained after investigation, to bring both sides to their senses and to a right determination of their difficulties.

Believing that investigation should be to a greater extent employed in industrial disputes, I wish to go further and call into the situation in greater measure than has heretofore been the case the ability and willingness to serve of a larger number of our private citizens of standing and reputation in their communities. There must be throughout the State a number of persons who would willingly serve in an investigation, if called upon and given authority to act. I recommend, therefore, that the power of the Commissioner to investigate strikes and lockouts be enlarged and that he be authorized to appoint boards of persons outside the Department to serve without pay, and who when serving will have the power to subpœna witnesses and take testimony under oath. Before such boards employers and employees could be brought and compelled to disclose to the public and also to each other the underlying causes that keep them apart. Such boards could file their findings and recommendations, and without attempting to compel acceptance of their conclusions, they could appeal to the public conscience to right the wrongs that exist. Neither side in industry can long afford to flout the just demands of society at large when those demands are predicated on the real facts.

In order that there shall always be persons available for service upon such boards of inquiry, I recommend that the Commissioner be empowered to appoint a panel of, say, one hundred members, in different parts of the State, who by designation of the Commissioner or by voluntary submission of the parties, may be called quickly into a given situation. I believe many qualified persons may be found glad to serve on such a panel.

Filing of Collective Labor Agreements

I desire to recommend the enactment of a statute which will require employers publicly to post in and about their plants or places of work, notice of any contemplated change in wages, hours of labor or methods of payment of wages, and to give prompt notice thereof to the Industrial Commissioner not less than ten days before such change is to take effect, and further that any organization of employers that takes joint action with respect to changing conditions of employment in any of the particulars mentioned, be similarly required to furnish information thereof to the Commissioner. I also suggest that any organization of workmen that takes action, by way of resolution of its organization or of any committee having power under the circumstances. making demands for changes in working conditions in any of the particulars mentioned, be required to give notice of such action to the Industrial Commissioner. With such required report to the Commissioner the Department will be in a position promptly to proceed to offer its services by way of mediation before an actual strike has been declared and before any cessation of work has taken place. This is generally the most effective time to take such action. I would also recommend that a statute be enacted requiring the parties to any agreement between an employer and his employees or between an association of employers and their employees affecting wages, hours of labor and other working conditions, to file such agreements with the Industrial Commissioner within ten days after they had been entered into. Such agreements can then be kept on file for official information and will also furnish a valuable index as to the time when agreements between employers and workmen are about to expire, in order that questions in dispute may be taken up in advance of the expiration of such agreements.

Employment

The question of public employment offices has been much in the public notice this year because of the distressing condition of unemployment existing throughout the country, and some have been critical of our policy in closing several of the State operated employment offices early last spring. Such criticism, however. proceeds from a misconception of the functions of an employment office and of the State's relation thereto. Some persons seem to be impressed with the thought that somehow a public employment office is going to create jobs, and that unemployment can somehow be remedied by opening such offices. There is only one sure remedy for unemployment and that is by creating employment. The causes are economic, and lie far deeper than anything that a public employment office can reach.

These offices do, however, perform valuable services in aiding in the distribution of such jobs as are available. They aid in relieving many individual cases of distress, and they enable workers to find jobs without paying tribute to the private fee charging agency.

When I took charge of the Department there were a number of employment offices maintained by the State in many of the smaller cities, as well as the large industrial centers of the State. These offices were a legacy from the old United States Employment Service, and were originally opened during the war as part of the government's war machine. After the close of hostilities Congress failed to appropriate funds to continue the United States Employment Service. At that particular time, however, the problem of the returning soldier was very acute, as was also the matter of getting jobs for the munitions workers who were turned back into peacetime pursuits. Urgently requested by the Federal authorities the State took over, at great expense, a considerable number of those offices.

The emergency that called for the support of the State for those offices passed with the end of demobilization and the final stoppage of all munitions and other wartime plants. Whether the State was to continue to maintain all these offices at large annual expense as a part of the regular activities of the State, or whether it should retrench was a question of policy that had to be decided. The question of employment is very largely a local problem. It did not seem logical to me to continue to charge indefinitely to the State at large the maintenance of purely local agencies to take care of local situations. Most, in fact practically all, of the hiring in these offices is of local people for local work. Why, then, should not the locality shoulder some of the expense? Why should one community without an employment office be taxed to maintain an office in another community which only benefits that other community? Certainly the State cannot afford to maintain employment offices in every community, and maintaining them in some and not others will inevitably lead to jealousy and eventual extension of the service and increase in the State expense.

I believe that the proper method of supporting public employment agencies is by the direct action of the local community, and by the State's contributing to such expense in proportion to the amounts contributed by the locality. The initiative, therefore, would be with the local community, its citizens would feel some responsibility for it and would be more likely to support its activities by reason of their local pride.

In such a situation if the Federal Government ever decided to appropriate funds for a national service cooperating with the States, the State could receive its grant of Federal monies and apportion them to the various localities to aid them in the extension of their work.

Aliens

The Division of Aliens has taken over such of the functions of the old Bureau of Industries and Immigration as it was found useful to retain. I deemed the title of the old bureau a misnomer and one that frequently leads to confusion. Immigration is a Federal function, and one with which the State cannot directly deal. The function of this Department is rather with aliens who have been admitted and are within our borders. Through this division are continued the functions of investigating the conditions of aliens and the licensing of immigrant lodging houses. The inspection of such houses and also the inspection of the temporary labor camps, which are made up principally of aliens, has been turned over to the Bureau of Inspection, as they are inspection matters.

Public Work

I desire to invite your attention to the fact that in the recodification of the Labor Law last year, old section 3, relative to public contracts, which was carried over in the new law as section 220, was so changed as to provide that a contractor violating any of the provisions of his contract required by the law, relative to prevailing rate of wages or the eight-hour provision, can collect the full amount of the contract, despite a possible breach of those provisions, except upon second conviction of a misdemeanor in connection therewith. I am of the opinion that this provision should be changed and that the rights of the contracting power, whether it be the State or a municipal corporation be fully restored to enable them to withhold the payment of monies after a single breach of the contract and further to require the withholding of any unpaid monies under such a public contract upon notice to the State or city authorities that the contract has been breached in one of these particulars. At the present time under section 223 of the law, the Industrial Commissioner is directed to submit the evidence of a violation of law or an evasion of its provisions to the public department or officer having charge of the execution of the contract and such public officer is thereupon directed to take the proper proceedings. Such proceedings, however, are not defined and under the provisions of subdivision 5 of section 220, such officer could not withhold any monies of a contractor, until a second conviction under the penal provisions of the law.

I desire further to recommend that section 220 of the Labor Law, relative to public work, be amended to provide that the eight-hour and prevailing rate of wage provisions be extended to persons employed by the State and municipal corporations or other political subdivisions thereof. At the present time the law relates only to contracts for public work and requires only that persons employed by a contractor upon public work be paid the prevailing rate of wages and that the eight-hour provision should apply. This would seem to be wholly inconsistent and at the last session of the Legislature a bill was passed in both houses that was designed to remedy this situation. The bill, however, was faultily drawn and would not have had the effect that its introducer intended and, therefore, did not meet with executive approval.

Another provision in regard to public work arises in connection with the opinion of the Attorney-General, given to me under date of May 18, 1921, in relation to the elimination of grade crossings where the work is carried on by a contract, the consideration of which is paid in part by a private corporation, in part by the State and in part by the local municipality. Under the Attorney-General's opinion the eight-hour and prevailing rate of wages provisions of section 220 do not apply to such a situation unless the State provides a fund out of which to reimburse the private party to the agreement for any increased cost that may be entailed by reason of the operation of these provisions. I recommend that section 220 be so amended as specifically to provide that public work whether done under contract of the State or municipal corporation solely or by one or both of them, together with a private person or corporation be made subject to the provisions in regard to eight hours work and the prevailing rate of wages.

BUREAU OF RESEARCH AND CODES

One of the most important and constructive functions of the Department is the preparation of rules and regulations for the conduct of industry, supplementing and amplifying the provisions of the law itself. Owing to the necessity of very careful study of conditions and trained observation of the dangers and hazards to be met in various industrial processes, it was deemed wise to confer upon the Department certain legislative powers. These legislative powers are conferred upon the Industrial Board, who may adopt or amend rules and regulations after public hearings thereon. Such rules and regulations constitute what is known as the Industrial Code, and they have the force and effect of law.

It is, of course, manifest that the members of the Board, with their manifold and exacting duties cannot in the first instance prepare the rules and regulations nor conduct the investigations necessary to ascertain the facts upon which such rules and regulations shall be based. The Commissioner, therefore, is authorized to propose rules and regulations for the consideration of the Board.

It has seemed to me that the research investigations that should precede the adoption of rules should be made under the same direction as the preparation of the codes themselves. Accordingly, I brought together in one bureau the research divisions and the code or rule-making division, where before such divisions were conducted under three different heads, entirely independent of each other. While ordinarily there should be a director of such an important bureau, free of other duties and responsibilities, I have felt it wise to utilize the especial qualifications of the present Deputy Commissioner to direct the work of this bureau, and he has acted as such director in addition to his other duties as deputy.

The two principal research divisions of the Department are the Division of Industrial Hygiene and the Division of Women in Industry.

In its original establishment in 1913 the Division of Industrial Hygiene was intended as a scientific research agency and not as an inspection or enforcement agency. The Division, however, in 1915, was attached to the Bureau of Inspection and came to be used almost exclusively as an adjunct of the inspection work. With such a vast field of usefulness for investigation and study of the peculiar dangers and hazards of different industrial processes, and the effect upon the human system of various metals, chemicals and gases, the Division has not heretofore realized its greatest function.

The Division of Women in Industry, likewise, should not indiscriminately investigate conditions, but its work should be directed along lines that will be most helpful in the preparation of codes for regulating the employment of women and children.

By bringing these divisions together under the same head and making their investigational work tie up closely with the rule-making authority, it is believed that the best results will be obtained.

The Division of Codes consists of the two Industrial Code Referees who are in active charge of the committees formulating the Industrial Code Rules. When the preparation of a set of new rules or amendment to existing rules is to be undertaken, the Commissioner appoints voluntary committees of experienced persons acquainted with the particular industry involved, both employers and workers. One of the Industrial Code Referees acts as chairman on each such committee. Such committees have as advisors the technical experts of the two Research Divisions attached to the bureau so that the information obtained during investigations can be made most useful in the preparation of the codes.

From the former Industrial Commission were inherited the fairly completed drafts of four codes, namely, a revision of Rule 2, relating to construction of factories, a set of rules relating to the construction of mercantile establishments, rules in regard to the artificial lighting of factories, and a revision of the rules relating to work under compressed air. The Industrial Board held hearings on these proposed rules in December, 1921, at Albany, Buffalo, Rochester, Syracuse and New York. Opportunity having been given to those desiring to protest against certain provisions to file memoranda, no action looking to final adoption has up to the present time been taken.

The preparation of other codes and the revision of some of the existing rules is now under way and investigations are being carried forward to ascertain the facts with regard to conditions affected by them.

CONCLUSION

In conclusion I desire to say that the work of the Department is well in hand and being maintained. I assert that, taken as a whole, no Department of the State Government is more industrious or maintains a more constant application to its business. Possibly the very human nature of the work and the intimate contacts with the people inspire to painstaking and loyal service.

I desire to express my thanks and appreciation to the members of the Industrial Board and to the bureau and division heads and to all the faithful employees of the Department for the hard work rendered and the loyal support given me in carrying out the great work of the Department for the benefit of the people of the State.

Respectfully submitted,

HENRY D. SAYER,

The Industrial Commissioner.

APPENDIX I.

GENERAL ORDER NO. 21

Pursuant to the authority conferred on me by Chapter 50, Laws of 1921, the organization of the Department of Labor is hereby prescribed as follows, effective July 1, 1921:

I. General Administration

The General Administration of the Department shall be exercised through the office of the Industrial Commissioner.

The Deputy Commissioner will perform such duties as may be assigned to him from time to time, and shall, in the absence of the Commissioner, be the Acting Commissioner, with full power and authority to do any acts or things which may be necessary and with the same effect as if done by the Commissioner. In addition, the Deputy Commissioner shall have general oversight and supervision, under the Commissioner, of the work of the Bureau of Inspection, the Bureau of Research and Codes, and the Bureau of Industrial Relations.

The Secretary of the Department shall be the custodian of the records of the Department, and shall act as Secretary to the Industrial Board. He shall be custodian of the Seal of the Department and shall use it to authenticate orders and records of the Department whenever required by law or by order of the Commissioner.

The Secretary will have immediate charge over the Division of Accounts and the Division of the Cashier. He shall have supervision over the stockroom and all requisitions for supplies or printing shall be made to his office. He shall also have supervision of the care and cleaning of the State building occupied by the Department in New York City.

The Chief Statistician is attached to the General Administration. He shall, under the direction of the Commissioner, collect and compile statistics and other information, and publish the same in such bulletins or otherwise as may be authorized.

The Official Bulletin of the Department shall be issued under the direction of the Commissioner and editor of the Bulletin shall publish such orders of the Commissioner and such rules and acts of the Industrial Board as may be directed by the Commissioner and such other information as may be authorized.

There are hereby created the positions of Assistant to the Commissioner. Such Assistants shall be assigned to cities in which there are offices of more than one bureau of the Department. One of such Assistants shall be assigned to Buffalo, one to Rochester and one to Syracuse. It shall be the duty of such Assistants to act as the direct representative of the Commissioner in such cities and to correlate and coordinate the work there of the different offices of the Department. They shall be responsible for the general conduct of the offices and shall have authority to require one office to assist in the work of another when occasion requires. They shall report to the Commissioner from time to time on the work of all offices within their jurisdiction, together with their recommendations. They shall also report directly to the various bureau heads matters arising in the offices under their care which relate solely to the work of the particular bureau.

The office of Counsel of the Department is hereby abolished, and the legal work of the Department will be conducted by the Attorney General or in such manner as he directs. Further orders will be issued hereafter more specifically dealing with the handling of legal matters in the Department.

II. Bureaus

The Department shall be organized in the following bureaus:

Bureau of Inspection.
Bureau of Workmen's Compensation.
Bureau of State Insurance Fund.
Bureau of Industrial Relations.
Bureau of Research and Codes.

Each bureau shall have such divisions as are set forth hereinafter or may hereafter be added.

III. Bureau of Inspection

The Bureau shall be in charge of a Director, and shall have the following divisions:

a. Division of Factory Inspection.
b. Division of Mercantile Inspection.
c. Division of Homework Inspection.
d. Division of Boiler Inspection.

The Division of Factory Inspection shall be under the immediate direction of a Chief Factory Inspector. There shall also be an Assistant Chief Factory Inspector, who shall perform such duties as the Chief Inspector shall designate. There shall be seven supervising inspection districts, the territory of each of which shall be as set forth in another order.

The Inspectors of this Division shall inspect all factories and other places to which the law applies, except as set forth elsewhere for other divisions of the bureau.

The Division of Mercantile Inspection shall be under the immediate direction of a Chief Mercantile Inspector. The inspectors of this Division shall inspect all mercantile establishments in cities except as may be otherwise ordered by the Director of the Bureau. They shall also enforce the provisions of the child labor law outside of factories and the elevator law in apartment houses, hotels and business offices.

The Division of Homework Inspection shall be under the immediate direction of the Chief of the Division of Homework Inspection, and the inspectors of the Division shall inspect tenement houses in which work for a factory is being done, and issue licenses therefor.

The Division shall from time to time issue a bulletin of all licensed tenement houses, as required by law.

The Chief of the Division shall in cooperation with the Chief of the Alien Division, have charge of the inspection of immigrant lodging houses.

The Division of Boiler Inspection shall be under the immediate direction of a Chief Boiler Inspector. The inspectors of this Division shall be known as boiler inspectors, and shall inspect boilers of 15 lbs. pressure and over. The Division shall also have charge of the records of boilers inspected by duly authorized inspectors of insurance companies and shall have supervision over the issuing of certificates of competency to such inspectors.

The former Bureau of Boilers and Explosives is hereby abolished and the records and work of such bureau relating to boilers are transferred to the Division of Boiler Inspection. The inspection and licensing of magazines for the storage of explosives is to be performed under the direction of the Director of the Bureau of Inspection.

IV. Bureau of Workmen's Compensation

The Bureau of Workmen's Compensation shall be under the immediate charge of the Director. It shall have charge of the receiving, docketing and filing of notices of accident and claims for compensation, the examination and preparation of such claims, the giving of notices in regard thereto, and the preparation of calendars for hearings on such claims, and all other matters incidental to the making of claims and the enforcement of awards.

There shall be in the Bureau ten referees, who shall, under the rules of the Industrial Board, hear and determine claims for compensation. The work of such referees is of a judicial nature, and they shall not be responsible for any part of the administrative work of the Bureau.

There shall be in the Bureau a Division of Claims Examination, which shall be under the immediate direction of a Chief Claim Examiner; and there shall be a Medical Division which shall be under the immediate direction of the Chief Medical Examiner.

There shall be a Division of Self Insurance, which shall be under the supervision of the Director of the Bureau, but which until further order shall continue in the Secretary's office and shall work in cooperation with the Secretary.

V. State Insurance Fund

There shall be a Bureau known as the State Insurance Fund, which shall be under the supervision of the Manager of the State Insurance Fund. There shall be an Assistant Manager, who shall perform such duties as the Manager shall direct and who in the absence of the Manager shall act as the head of the Bureau.

The State Fund shall have the following subdivisions, which shall not be regarded as independent divisions, but divisions of the work for office purposes:

Underwriting.
Accounting.
Claims Adjustment and Medical.
Safety Engineering.
Actuarial.

The Actuary shall be under the direction of the Manager of the State Fund as to the work of his division and its relation to the work of other divisions of the fund, but he shall be responsible, and report, directly to the Industrial Commissioner at his direction, on any question requiring actuarial judgment. The Actuary will also be required to make all computations in commuted cases for the information of the Bureau of Compensation, a proper distribution of the expense being made therefor.

VI. Bureau of Industrial Relations

There is hereby established a Bureau of Industrial Relations, which shall be under the supervision of the Director of Industrial Relations. The Bureau shall have the following divisions:

a. Division of Mediation and Arbitration.
b. Division of Employment.
c. Division of Aliens.

The Division of Mediation and Arbitration shall be under the immediate direction of a Chief Mediator, and shall take cognizance of industrial disputes and endeavor to effect an amicable settlement thereof.

The Division of Employment shall be under the immediate direction of the Chief of the Division of Employment and shall conduct the employment activities of the Department and endeavor to effect and carry out cooperative arrangements with local authorities, and shall also cooperate with the United States Employment Service.

The Division of Aliens shall be under the immediate direction of the Chief of the Alien Division. The Division shall cause to be made investigations of the conditions of Aliens in industry. The Division shall also in cooperation with the Bureau of Inspection, have charge of the issuance of licenses for immigrant lodging houses and of investigating complaints in regard to the same. It shall also have charge of claims of frauds or exploitations of aliens.

The Director of Industrial Relations shall also supervise the work of investigations of public contracts with reference to the payment of the prevailing rate of wages, hours of labor and alien labor.

VII. Bureau of Research and Codes

The Bureau of Research and Codes shall for the present be under the immediate supervision of the Deputy Commissioner who shall act as the head of the Bureau until further order of the Commissioner. The Bureau shall have the following divisions:

a. Division of Industrial Codes.
b. Division of Women in Industry.
c. Division of Industrial Hygiene.

In the Division of Industrial Codes there shall be two Industrial Code Referees and the Division shall have charge of preparing proposed rules and regulations relative to industry and industrial processes and any amendments or repeals of existing rules. Such rules shall be submitted to the Commissioner for consideration by him to be proposed by him to the Industrial Board for action. The Division shall also have charge of the preliminary investigation and hearing of variations from the provisions of the Labor Law with respect to new factory buildings.

The Division of Women in Industry shall carry forward the work heretofore undertaken by the Bureau of Women in Industry and shall investigate the conditions of women workers and all matters relating thereto and shall also make reports of such special investigations as in the judgment of the Commissioner may require rules or modifications of existing rules. Such reports shall then be considered by the Division of Industrial Codes.

The Division of Industrial Hygiene shall make investigations of industrial processes and special conditions in order to determine the hazards of such processes and make reports to be used as the basis for new rules or changes in existing rules. The division shall also cooperate with the Bureau of Inspection in making special investigations and in the examination of plans for new buildings and plans of special installation which may be ordered by the Commissioner.

(Signed) HENRY D. SAYER,
The Industrial Commissioner.

APPENDIX 2

FINANCIAL STATEMENT FOR PERIOD FROM JULY 1, 1920–JUNE 30, 1921

Appropriations:		
Unexpended cash balance July 1, 1920	$224,997 79	
Appropriation, Chapter 166, Laws of 1920, Part 1	2,276,225 00

APPENDIX 4

NEW YORK STATE — LABOR DEPARTMENT

In the Matter of Determining and Assessing the Expenses of Administering the Workmen's Compensation Law for the Fiscal Year Ending June 30, 1920.

Pursuant to the provisions of Section 77 of the Workmen's Compensation Law as amended by Chapter 622 of the Laws of 1916, and further amended by Chapter 540, Laws of 1921, I, Henry D. Sayer, The Industrial Commissioner, do hereby ascertain and determine as follows:

1. That the amount of expenses incurred during the fiscal year ending June 30, 1920, in connection with the administration of the Workmen's Compensation Law is Five Hundred Sixty Six Thousand, One Hundred Seventy-seven Dollars and Eighty-one Cents ($566,177.81).
2. That the total of compensation or payments made by all insurance carriers, including the State Insurance Fund, during the fiscal year ending June 30, 1920, is Fourteen Million, Six Hundred Sixty-three Thousand, Two Hundred Twenty Dollars and Eighty-five Cents ($14,663,220.85).
3. That the percentage which the total expenses bear to the total compensation or payments made is .0386121, and

There having been, heretofore and on or about the 8th day of March, 1921, submitted to each insurance carrier a statement of the payments of compensation made by said carriers during said fiscal year, together with a statement of compensation expenses and compensation payments for said period and each insurance carrier on said date having been advised that unless objections to said statement were filed on or before March 18, 1921, said statement would be assumed to be correct, and no corrections having been filed,

Now Therefore, I, Henry D. Sayer, The Industrial Commissioner, *Do Hereby Assess* upon each insurance carrier, including the State Insurance Fund, the proportion of such expense that the total compensation or payments made by each such carrier in such year bears to the total compensation or payments made by all insurance carriers, as appears in Statement hereto annexed and hereby referred to as forming a part hereof.

Dated *September* 1, 1921.

HENRY D. SAYER,
The Industrial Commissioner.

APPENDIX 6

RULES AND PROCEDURE UNDER THE WORKMEN'S COMPENSATION LAW

Effective February 1, 1922

(*References are to Laws* 1914, *Chapter* 41, *as amended*)

Adopted by the Industrial Board of the State of New York, December 21, 1921, pursuant to Chapter 50 of the Laws of 1921, as amended

1. *Employee's First Notice of Injury* (*C*-1).

All employers are required by statute (Section 76, W. C. L.) to keep on hand for the use of their employees, employee's first notice of injury (C-1). If such notice is not readily procurable by the employee or his representative from the employer, then such notice as will meet the requirements of the law shall be given (Section 18, W. C. L.).

2. *Employer's Report of Injuries* (*C*-2).

This should be filed promptly with The Industrial Commissioner. Section 3 of the statutes provides that failure to make such a report within the statutory period of ten days shall be a misdemeanor. These reports will be numbered and indexed immediately upon their receipt by The Industrial Commissioner.

3. *Employer's Supplemental Report of Injury* (*C*-11).

If the employer's first report of injury does not indicate the time of injured employee's return to work, the employer shall promptly, upon the employee's return to work, file a supplemental report on this form, reporting such fact.

4. *Employee's Claim for Compensation* (*C*-3).

Upon the filing of the employer's first report of injury, The Industrial Commissioner will send to the injured employee Form C-3, with instructions that he fill out and file same, and also with instructions for the further preservation of his rights.

5. *Rule for Reckoning Wage Rates.*

(a) If the claimant's total working days per week are 5½ or 6, the daily wage shall be multiplied by 300, the result divided by 52, and two-thirds of this result shall be the weekly compensation rate.

(b) If the claimant's working days per week are 7, it shall be presumed in the absence of substantial evidence to the contrary that the number of days worked during the year immediately preceding the date of accident was 332, and the daily wage shall be multiplied by 332, the result divided by 52, and two-thirds of this result shall be the weekly compensation rate.

(c) Whenever it appears that the claimant has worked more than 332 days in the year immediately preceding the date of accident, the factor used in multiplying shall be the actual number of days worked; and if it shall appear that the claimant has actually worked less than 332 days in the year immediately preceding the accident, but not less than 300 days, the factor used in multiplying shall be such actual number of days worked.

(d) If the claimant's total working days per week are 5, the daily wage shall be multiplied by 260, the result divided by 52, and two-thirds of this result shall be the weekly compensation rate.

(e) If the employee is paid a fixed weekly wage, the weekly compensation rate shall be two-thirds of his fixed weekly wage.

(f) If the employee is paid a fixed monthly wage, his fixed monthly wage shall be multiplied by 12, the product divided by 52, and two-thirds of this result shall be the weekly compensation rate.

(g) In no case shall the compensation rate exceed the maximum provided by law, namely $20 per week; nor shall the compensation rate be less than the minimum provided by law, namely, $8 per week, unless the weekly wage rate be less than $8 in which event the compensation rate shall be the actual weekly wage rate.

(h) In computing the daily wage, account shall be had of the reasonable value of board and lodging, rent, bonuses, tips or other gratuities, overtime, or of any other thing of value or pecuniary advantage enjoyed by the workman as part of his remuneration. The reasonable value of board and lodging or rent shall be deemed to be such sum as it would reasonably cost the workman to furnish the same for himself in the same community and for persons of like standard of living.

(i) In computing the prospective earnings of a minor under Subdivision 5, Section 14, decision must be based upon testimony tending to establish the reasonable expectation of the increase in the wages of the claimant. In cases of temporary disability not amounting to the loss of use of a member or part thereof, no account shall be taken of the probable increased earnings of a minor.

6. *Attending Physician's Report* (*C*-4).

The employer or insurance carrier shall promptly file with The Industrial Commissioner all physicians' reports coming into his or its possession.

7. *Effect of Advance Payments.*

(a) No case in which an advance payment is made shall be barred by the failure of the employee to file a claim for compensation. (See 20-a, W. C. L.).

(b) The payment or receipt of compensation as provided under Section 25 of the Law or under an award of the Industrial Board or a Referee, shall not be considered as a waiver of any question other than the filing of the claim for compensation or notice of accident under Section 18, W. C. L., and shall not preclude any party in interest from later submitting such a case to The Industrial Commissioner, or the Industrial Board as a controverted case.

8. *Hospital Records and Reports.*

All hospital or medical reports in any pending claim for compensation coming into the possession of the employer or insurance carrier shall be filed with The Industrial Commissioner or the Board upon the order of the Board.

9. *Notice that Payment of Compensation has Begun* (*C*-6).

The employer or insurance carrier shall notify The Industrial Commissioner that payment of compensation has begun, without awaiting award of the Referee, unless notice of intention to controvert as provided in Rule 10 is filed. (Section 25, W. C. L., as amended, 1921.) Copy of this notice shall be furnished to the injured workman by the employer or insurance carrier at the time of making the first payment of compensation.

10. *Notice of Stoppage or Suspension of Compensation* (*C*-8).

Immediately upon stoppage or suspension of a payment of compensation, the employer or insurance carrier shall file with The Industrial Commissioner a notice in duplicate to this effect. The Industrial Commissioner, upon receipt of this notice, will immediately forward to the injured employee one of such duplicate notices together with a notice of opportunity to be heard. (C-12).

11. *Notice of Intention to Controvert* (*C*-7).

In case the employer or insurance carrier intends to controvert the right to compensation, he shall either on or before the twenty-fifth day of disability or within ten days after he has knowledge of an injury, file a notice with the Industrial Commissioner that compensation is not being paid and indicating in such notice the reasons for such non-payment. (See Section 25, as amended, 1921, W. C. L.).

12. *Original Hearings Before Board.*

If a controverted case involves a novel question or one involving a question of public policy, or a question of jurisdiction (except a question of due notice of injury) or matters of equal importance, an original hearing may be held before the Industrial Board, provided a written application setting forth the question involved for such hearing is filed by either party with the Industrial Board. It will be discretionary with the Board whether such application will be granted.

13. *Decisions by Referees.*

In hearings of contested cases the Referees shall make a brief summary of the decision upon the contested points. This decision may be given by an oral statement of findings upon the essential points, which statement shall be entered upon the stenographic minutes of the hearing or may be in a brief written statement which shall be signed and filed with the papers in the case. Whenever there is in the file a synopsis of the claim, which appropriately sets forth the material facts, the Referee may sign by name or initial such synopsis, which shall then be deemed his memorandum of decision.

14. *Claim against Third Party.*

In the event of a claim of liability of a third party for an accident, if the employee chooses to pursue his remedy against such third party, pursuant to Section 29, W. C. L., a form known as a "subrogation claim" shall be filed with The Industrial Commissioner by the claimant or his legal representative, to safeguard the claimant's interest in his right to compensation; and immediately upon the filing of such subrogation claim by the claimant or his representative, The Industrial Commissioner shall notify the employer or insurance carrier of the fact of the filing of such notice, in order that the payment of compensation pending the determination of the third party action may be suspended.

15. *Failure of Employer to Make Reports.*

Where it appears that the employer has failed to report an accident, or that the insurance carrier having in its possession a report of accident has failed to forward such report to the Commissioner, and it appears that such failure by the employer or insurance carrier has been without justification, the Commissioner, Board or a Referee shall refer the matter to the Attorney-General for prosecution in accordance with the law: and where it shall appear that the employer or insurance carrier has failed to pay compensation, or to notify the Commissioner that he intends to controvert a claim, or has failed or neglected to perform any other act required by law or these rules, the Commissioner or Board shall cause an investigation of the facts to be made, and shall present such facts for appropriate action and the imposition of the penalties provided by law.

16. *Referee's Calendars.*

There shall be the following Calendars:

(a) Conference Calendar.
(b) Trial Calendar.
(c) Final Adjustment Calendar.
(d) Medical Claim Calendar.
(e) Death Claim Calendar.
(f) Occupational Disease Calendar.

NOTE.— This classification shall be applied in the City of New York. Elsewhere in the state, according to the needs and accommodations of the district, one or more of the above named calendars may be noticed for and held upon the same day.

(a) The Conference Calendar shall consist of all cases that may be disposed of by conference of the parties, without the formal taking of testimony, and of uncontroverted cases in which compensation has been paid, which are called for closing upon due notice to the parties of opportunity to appear and to offer objection to such closing, if they so desire.

(b) The Trial Calendar shall consist of all controverted cases in which evidence is to be taken, except those cases included in the final adjustment calendar. All parties shall be ready, with all witnesses present, in cases on the Trial Calendar, on the day designated in the notice and prepared to dispose of the case on that day.

(c) The Final Adjustment Calendar shall be made up of cases involving the loss or loss of use, in whole or in part, of a member, or serious head or facial disfigurement, after all questions have been disposed of except the extent of disability, and after a sufficient length of time has elapsed for healing and to permit of determination of the permanency and extent of disability or disfigurement; also cases of continuing temporary total or partial disability which in the judgment of the Referee may be closed by agreement; but such agreement shall be approved only when it clearly appears that such agreement is in the interest of justice and that the rights of the claimant have been fully considered and are amply protected by such agreement; or any other case which may be referred by a member of the Board or Referee to this Calendar in which compensation is being paid.

Applications for lump sum settlements or commutations of awards, except in Death Claim cases, for specific loss, shall be heard upon the Final Adjustment Calendar. All such applications shall be in writing, stating the purpose for which the commutation is desired, unless made orally at the time of the making of the final award. No commutation shall be granted in any cases, including Death Claim benefits, unless it appears to be in the interest of justice, and for the best interest of the beneficiary, and can only be made upon proof of facts supporting the conclusion that it is in the interest of justice.

No final award shall be made in the case of the loss or loss of use of a member or of a disfigurement, until at least three weeks have elapsed after the final medical treatment has been rendered.

In all cases wherein the extent of loss or loss of use of a member is to be determined, medical evidence shall be taken by the Referee for his guidance and advice, in addition to his personal examination and observation.

(d) Medical Claim Calendar shall consist of all disputed claims for medical or hospital treatment or other expense.

(e) The Death Claim Calendar shall consist of all claims for death benefits, funeral expenses and payments into the special funds in cases of no dependents. Upon this calendar shall be heard all applications for the commutation of awards of death benefits, or for partial payments in advance, and all questions relating to the requiring of guardianship.

The Referee may, in his discretion, direct the hearing of any such claim or application in a room apart from the general hearing room.

(f) The Occupational Disease Calendar shall consist of all claims for disability or death as the result of an occupational disease.

17. *Industrial Board Calendars.*

Industrial Board Calendars shall be appointed for and held at such time and places within the State as the Board may from time to time direct to meet the convenience and the requirements of the several districts of the State.

Such Board Calendars shall be classified as follows, viz.,

(a) Motion Calendar.
(b) Review Calendar.
(c) Trial Calendar.

NOTE.— In other places than New York City, cases may be noted for hearing upon one or more of the above calendars and heard by the Board, or a member thereof, upon the same day.

(a) Motion Calendar shall consist of all motions or applications made before the Industrial Board or a member thereof, including applications for review, rehearing, opening of defaulted cases and any case not properly placed on a review or trial calendar. No testimony is to be taken in cases upon a Motion Calendar. Applications for a trial by the Industrial Board in the first instance, as provided for in Rule 11, shall be placed upon a Motion Calendar when so directed by the Board or the Chairman thereof.

(b) Review Calendar shall consist of all cases where decisions of Referees in granting or denying an award or other orders in a case are to be reviewed by the Industrial Board.

(c) Trial Calendar shall consist of all cases to be tried in the first instance before the Industrial Board or a member thereof, under General Rule 11, and any other case or hearing ordered by the Board or a member thereof, placed upon such calendar.

NOTE.— The Board construes and classifies the Reference to "Reviews" and "Rehearings" as contained in the Compensation Law and the Labor Law as applied to compensation cases, as follows:

Reviews are regarded in the nature of appeals from the decision or award of the Referee and are intended to be heard solely upon the record of the case as presented before the Referee and upon which he rendered his decision.

Rehearings are construed to indicate a further hearing before a Referee or the Board, for the purpose of taking additional proofs or proof of a change in conditions as a basis for a modification or reversal of decision or award.

18. *Application for Review.*

Application for review by the Industrial Board of decisions of Referees in granting or refusing an award or a review of any other action taken by a Referee shall be made in writing to the Industrial Board or the Chairman, and shall state the specific grounds for such application; and may be accompanied by a reference to or excerpt from the official minutes or of such part thereof as is relevant to the issues raised. Such reviews shall be had and determined upon the evidence and testimony in the record. Such application for review shall be filed within a reasonable time after filing of the decision of the Referee which is sought to be reviewed. Applications for review shall be placed upon a Motion Calendar, and allowance of such review shall be discretionary with the Board.

Upon such review the Board may affirm, reverse or modify any decision or award of a Referee as the law and the facts may require; or may remand the case to the Referee to take further proofs or to further proceed with the case as the Board may direct; or may continue the case for the further consideration of the Board, as may be in the interest of justice.

19. *Application for Rehearing.*

Upon application to the Industrial Board for a rehearing of a claim for compensation or for death benefits, upon the ground,

a. That certain material evidence not available for presentation before the Board or the Referee at the trial is now available, or

b. Upon proof of a change in conditions material to the issue involved, or

c. Otherwise, in the interest of justice, the Industrial Board may, in its discretion, refer a case back to the Board or to a Referee for the taking of testimony or evidence sought to be introduced and for further consideration, or may make such other disposition of the application as may be just in the premises. When a case or any issue therein is so referred to a Referee, he shall thereupon receive such testimony or proofs as are specified in the order of the Board and he may then reconsider the case in the light of all evidence previously introduced, together with that presented at the rehearing and may then render a decision upon the completed testimony and evidence in the case.

Applications under this Rule for a rehearing may be placed upon a Motion Calendar when approved by the Board or the Chairman, upon notice to all parties concerned. Any party in interest to a claim for compensation or for death benefits, may, in the first instance make application for rehearing under this Rule and in conformity to its provision before the Referee who heard the case and rendered decision therein. If such application is denied by such Referee, the same may then be renewed to the Industrial Board, in which case, the application to the Board shall state that a previous application has been made to the Referee and that the same has been denied.

20. *Notices of Hearings.*

All notices of hearings upon any calendar shall specifically state the calendar upon which the case will appear and the purpose of the hearing, and shall be mailed to the claimant, the employer and the insurance carrier at least eight days before the date specified in the notice of hearing; but in the discretion of the presiding Referee, or member of Board, any issue in a case may be considered and passed upon though not specifically indicated in the notice of hearing, if the speedy administration of justice without prejudice to any party will thereby be substantially served.

21. *Hearings by Referees.*

Every hearing upon a claim for compensation or for death benefits held before a Referee or a member of the Board, shall be conducted in an orderly manner, all witnesses testifying under oath (or by affirmation) and a record of the proceedings shall be made and kept. Such hearings shall be conducted in such manner as to ascertain the substantial rights of the parties and the Referees or the Board shall not be bound by common law or statutory rules of evidence or by technical or formal rules of procedure. (Section 68 W. C. L.)

Where claimant is not represented the Referee shall examine the claimant and his witnesses and cross-examine the employer or carrier's witnesses on claimant's behalf.

22. *Medical Examination.*

Medical examination provided for by Section 19 of the Workmen's Compensation Law shall be conducted only in the presence of the physicians of the Department, a Referee or one or more members of the Board; except that the claimant, employer or carrier may have one representative present at such examination, who may or may not be a physician. A claimant who refuses to submit to medical examination, as required by Section 19 of the Workmen's Compensation Law, may subject himself to suspension of the rights to prosecute his claim for compensation for the period of such refusal. (Section 19, W. C. L.)

23. *Reports by Referees.*

Referees shall from time to time report to the Chairman of the Industrial Board any difficulties in the administration of the law or rules, and also may submit to said Chairman legal questions of frequent occurrence on which they desire guidance in rulings so as to maintain a uniform policy and practice in the administration of the Compensation Law.

24. *Statements, Certificates, Etc.*

All written statements, certificates or reports filed or submitted in any claim shall be a part of the record and shall be given such consideration as the Board or Referee shall deem proper subject to the right of any party in interest to challenge or controvert the same.

25. *Application of Rules.*

The Board may in its discretion in exceptional cases where the rights of a party would be seriously prejudiced by the enforcement of one or more of the foregoing rules, suspend or modify the application of any such rule.

RULES GOVERNING ACTUARIAL PROCEDURE IN COMPUTED LUMP SUM SETTLEMENT

26. No award shall be made for a lump sum payment on account of all, or any part, of the remaining compensation due any claimant, unless a definite award has previously been made to such claimant. By a definite award is meant an award in which compensation payments terminate at a definite date or in the event of the death or remarriage of such claimant.

27. Every award for a lump sum payment on account of all, or any part, of the remaining compensation due any claimant shall be based upon a computation by the Actuary.

28. The Actuary shall base his compensation upon the Survivorship Annuitants' Table of Mortality, the Remarriage Tables of the Dutch Royal Insurance Institution and interest at three and one-half per centum per annum, provided that this interest rate shall not apply to computations made under Rule 33 hereof.

29. The Tables printed in the June, 1917, issue of "The Bulletin" of the New York State Industrial Commission and "Table of the Present Value of $1 per week at 3½% Compounded Annually" (now in use by the Department) are hereby declared to be in conformity with the requirements of the foregoing Rule 28.

30. The Actuary shall make his computations as of the date the lump sum is awarded by the Industrial Board or its authorized representative, except that in lump sum settlements under Section 17, the computation shall be made as of the date of the death of the injured employee, insofar as such computation applies to dependents who were not residents of the United States or of Canada at the time of such death.

31. In computing a lump sum settlement to a widow for part of the future payment due her, the Actuary shall not take into account the probability of the widow's receiving the two years' remarriage payment provided in Section 16-2; but in computing such settlement to a widow for all future payments the Actuary shall take such remarriage probability into account.

32. In computing a lump sum settlement to one or more dependents in cases involving the maximum compensation of 66⅔% of wages, the Actuary shall consider that the same proportionate reduction is to apply to the compensation rate of each dependent.

33. In computing the interest due as the result of an award being affirmed upon appeal to the Appellate Division the Actuary shall use an interest rate of six per centum per annum.

34. In making any computation involving a recovery by a claimant from a third party under Section 29, the Actuary shall treat the amount so recovered as though it were a lump sum settlement resulting from an award by the Industrial Board or its authorized representative.

35. In computing a lump sum settlement to a claimant who has been awarded compensation for permanent partial disability under Subdivision 3 of Section 15 on account of an injury received on or after May 4, 1920, the Actuary shall assume the award to survive unless the employer or his insurance carrier has, at the time of awarding the lump sum, established the fact that the claimant is then without wife or child under the age of eighteen years.

36. The foregoing Rules and Procedure under the Workmen's Compensation Law shall take effect February 1, 1922.

[L. S.]

JOHN D. HIGGINS,
Chairman.
RICHARD H. CURRAN.
ROSALIE LOEW WHITNEY.

PART II

REPORT OF BUREAU OF INSPECTION

REPORT OF DIRECTOR

IN CHARGE OF BUREAU OF INSPECTION

To the Industrial Commissioner:

There is submitted herewith the report of the Bureau of Inspection for the fiscal year 1920–1921, covering the period for the twelve months ended June 30, 1921.

Appended are the complete statistical tables showing in full detail the work performed by the several divisions of the Bureau of Inspection.

The work accomplished shows a generally satisfactory condition as compared with previous years, and in volume and standard of work achieved has reached the highest point of efficiency since the organization of the Bureau of Inspection. These results were made possible by the diligence of the field and office forces who have performed their duties in a creditable manner. The duties and responsibilities with which the several divisions of the Bureau of Inspection are charged are so numerous that it is necessary to maintain an efficient system of conducting the work. The methods employed have proven very satisfactory in accomplishing the greatest results in the task of enforcing the many provisions of the Labor Law assigned to the Bureau of Inspection. While our present system is giving satisfaction, we are constantly working to improve and develop its efficiency.

Comparison in the following table shows the increase since 1915 in some of the important details of factory inspection work, and the decrease in the number of complaints filed:

STATISTICS OF FACTORY INSPECTION

	Year 1915	Year 1921	Percentage of increase
Regular inspections	40,996	72,773	77.5
Special inspections	6,869	18,365	167.3
Compliance visits	62,299	105,897	69.9
Complaints filed and investigated	2,296	816	64.4*

---

* Decrease.

COMPLAINTS

The effective enforcement of the law is illustrated in the number of complaints. In a sense they are a barometer of the standard of enforcement. In each division of the Bureau the number of complaints has steadily declined in number since 1915. This is so, although by the changes in the law and codes the power and scope of the Bureau's work has been enlarged considerably.

The following shows the number of factory and mercantile establishments to which complaints related:

Fiscal Year	Factories	Mercantile Establishments
Oct. 1, 1915–June 30, 1916	3,583	1,193
July 1, 1916–June 30, 1917	2,539	1,426
July 1, 1917–June 30, 1918	2,016	1,388
July 1, 1918–June 30, 1919	1,297	1,191
July 1, 1919–June 30, 1920	1,206	937
July 1, 1920–June 30, 1921	816	851

The nature and the number of the complaints filed for the year ended June 30, 1921, relating to factory and mercantile establishments are indicated in the following tables:

Year ended June 30, 1921	FACTORIES				MERCANTILE ESTABLISHMENTS			
	Number	Sustained	Not sustained	Thereof anonymous	Number	Sustained	Not sustained	Thereof anonymous
Administration	6	5	1	4	5	3	2	5

†	1,266	653	613	436	‡851	355	496	651

† These complaints were of violations in 816 different factories.

‡ These complaints were of violations in 851 different mercantile establishments.

FACTORY INSPECTION DIVISION

The results achieved by the Division of Factory Inspection are very gratifying. The volume of the work can be seen by a study of the general table appended on page 117.

The number of orders issued is shown in the table and it will be noticed that the number of compliances is in excess of the orders issued. This is a very satisfactory result as it enables the Division to gain on the orders that have to be carried over from one fiscal year to the next. While this carry-over is necessary, the number is not large considering the great number of orders issued each month. The outstanding orders not complied with in the factory division on June 30, 1921, was 21,364. This indicates how systematically the compliance with orders is handled. To make inspections and issue orders would not accomplish much, if we did not secure compliance with the orders issued. To secure the results indicated in the figures shown, requires eternal vigilance and it may be said that the factory owners in the main realize the wisdom of complying with the provisions of the law on which the orders are based. Considering the number of factories to be inspected and the number of orders issued we have very little difficulty in securing the results shown in the work achieved.

While this tabulation referred to relates to factories only, the same results are obtained in connection with mercantile establishments in proportion to the force available for that class of work, and those owning property or conducting the mercantile establishments emulate the spirit shown by those operating factories.

HEALTH AND SAFETY ORDERS

This class of orders represents the constructive work of the Bureau of Inspection. The following table sets forth very clearly the number of orders issued and compliances secured, regarding health and safety orders, by the Division of Factory Inspection for the past eight years, covering the period from October 1, 1913, to June 30, 1921.

If a study of these figures is made one will get a fair idea of the excellent progress achieved in promoting and developing proper sanitary standards and safety appliances for the protection of those employed, and the modification or elimination of the hazards of industry.

This table shows that in the past eight years there were 1,332,866 compliances secured with health and safety orders in factories. To secure these results required a vast amount of work on the part of the inspection force, and the expenditure of a large amount of money to make the necessary changes in compliance with orders. In the results secured the property and factory owners have done their part in a commendable manner, and in the main have done it in a spirit of cooperation with the Inspection Bureau in maintaining the standards provided by the Labor Law. Those to whom orders are issued have the right of appeal for variation, under section 30 of the Labor Law, and for a review of rules or orders, under section 110 of the Labor Law. In comparison with the large number of orders issued, the number appealing from the requirements is very small. It is true we have to threaten to prosecute, in some instances, before compliances are secured. This last class and those whom we really have to prosecute before compliance is secured constitute a small group, considering the many thousands to whom orders are issued. Generally there has been speedy compliance, and there is every indication that those owning factory property and those operating factories are willing to do their part in the campaign to promote the health and safety of those employed in industry.

ORDERS ISSUED TO FACTORIES BY THE BUREAU OF INSPECTION, AND COMPLIANCES THEREWITH, IN NEW YORK STATE FROM OCTOBER 1, 1913, TO JUNE 30, 1921, BOTH INCLUSIVE

WHOLE NUMBER OF ORDERS AND COMPLIANCES

FISCAL YEAR	Orders	Compliances
Oct. 1, 1913–Sept. 30, 1914	287,893	179,826

---

* For nine months, the fiscal year having been changed by law from October 1–September 30 to July 1–June 30.

† Exclusive of 62,124 orders (issued and acted upon previous to May 1, 1916, since which date similar orders have been recorded as complied in the monthly and annual reports of the Department of Labor), in which jurisdiction was transferred by law to New York City departments or the illegal conditions ceased by reason of modifications in the Labor Law and Industrial Code, removals, fires, or accompanying circumstances such as to make the original orders no longer necessary to be enforced by the Department of Labor. These figures bring the aggregate number of orders disposed of up to 1,894,990 leaving a total of 21,364 orders outstanding on July 1, 1921. Included in these 21,364 uncomplied orders are 5,255 orders that were issued in the month of June, 1921, and the impossibility of securing compliance with the major portion of these latter orders before July 1 is readily apparent.

CONTROL OF DUST, GASES AND FUMES

The Bureau is accomplishing excellent results in solving the many problems and difficulties encountered in the installation of exhaust systems for the successful removal of dust, gases and fumes. The plan and scope of our method of handling this phase of our activities have proved very satisfactory to manufacturers and contractors. We have, by the cooperation of the Inspection Bureau and the contractors installing exhaust and ventilating systems, accomplished results which are very gratifying and which have resulted in a high standard of installation, which is effective in improving working conditions and thus protecting the health of the workers.

In former reports we have outlined our methods and there is no need to repeat them again in this report. The result of our policy has been to protect the interests of the manufacturer by seeing that the contractor installs a proper system, efficient and capable of correcting the existing conditions, and thus the manufacturer is not spending his money for a poor system which would not be capable of doing the work in a satisfactory and efficient manner.

MERCANTILE DIVISION

The work accomplished by the Division of Mercantile Inspection was most gratifying. We succeeded in covering a greater number of establishments than in any year since the organization of the Division. In addition there was a general increase in the orders issued, and compliance with 114,274 orders was secured. At the close of the fiscal year there were very few uncomplied orders outstanding. The figures of the work accomplished are clearly set forth in the appended tables showing the general volume of the work achieved by the Bureau of Inspection.

Generally, merchants conducting mercantile establishments are realizing the wisdom of complying with the provisions of the law and this is particularly so in regard to the employment of children under age, or without certificates of employment, and the employment of women and children illegal hours. The figures for this year show that there has been a considerable decrease in this class of violation, compared with the previous years, although there were many thousand more establishments visited. This condition is a vast improvement over that prevailing a few years ago, and shows the benefits of the educational methods adopted to acquaint the merchants with the provisions of the law and the necessity of complying with same. Of course, when they are obstinate and defiant they are prosecuted, but in this line of our activities there has been a great reduction in the number of prosecutions.

HOMEWORK DIVISION

The results of the activities of this division are set forth in condensed form in the table that follows. A study of this table will show that the amount of inspection work performed by the field force is the greatest recorded in any year since the organization of the division in 1899. The inspection of 25,089 separate licensed buildings; the investigation of 5,471 unlicensed buildings on suspicion that the law was being violated therein; the investigation of 2,588 new applications for licenses; and the inspection of a total of 305,802 separate living apartments in all buildings visited, both licensed and unlicensed, besides numerous other time consuming duties as shown in the table, go to make up the total of recorded services performed by the inspection force of the Homework Division for the year just closed. During the year the field work has been greatly complicated and the enforcement of the law made more difficult on account of the prevailing general housing conditions. This was especially true in the matter of securing compliance with sanitary orders issued against licensed houses. The rent quarrels between the owners of tenement houses and their tenants are to some slight extent reflected in the table showing the large number of orders issued (3,964), as well as the number of visits (9,050) made by the inspectors to secure compliance with these orders. While the housing conditions were general throughout the State, in New York City these conditions were intensified because of the greater density of population — two and sometimes three families were found occupying living quarters intended for one family. This condition of overcrowding was greatly aggravated by reason of the fact that owners and agents refused to do anything towards the proper upkeep of their property.

This situation affected our work very seriously because the inclination of the tenement house owner in his desire to force up rents was to deny his tenants any favors or any privileges which were his to grant. This attitude of tenement house owners and their agents in refusing to undertake repairs or to even have the ordinary every-day cleaning done has given us great trouble. This is true especially in licensed tenements against which sanitary orders had to be issued. A glance at the table will show that this year we have cancelled 3,515 licenses and revoked 313, a total of 3,828 licenses, the removal of which in nearly every instance is attributable to the existing rent war between landlords and their tenants. The results before us as shown by the combined reports of the field workers is that the sanitary upkeep of tenement houses is bad and in a number of cases very bad and consequently very dangerous to the community at large. The following orders issued in one instance clearly illustrate these conditions:

1. Clean the public halls on all floors by painting the walls, ceiling and woodwork of same.
2. Paint the kitchens in both front apartments on first floor.
3. Paint all rooms in all apartments front and rear on second and third floors.

4. Paint the kitchens in all apartments front and rear on fourth and fifth floors.
5. Scrub clean and keep clean the interior of waterclosets on all floors and in the basement.
6. Scrub clean and keep clean the floors and stairs of public halls.
7. Clean cellar and yard, removing all dirt and refuse.

Persons, owners or agents responsible for the care and upkeep of property affected by our orders offered as excuses the high cost of material and labor, the courts' adverse rulings on rents, the acts of careless or dirty tenants and some say plainly that they will not comply with any orders of any kind from any source unless the tenants agree to pay an advance in their rents. The following memorandum filed by one of our inspectors is indicative of this attitude on the part of tenement house owners with which we have to deal:

MR. O'LEARY:

Mr. C., owner of ——— E. 143d street has finally signed authorization but he would not sign for Mrs. H. who made the application because there was some trouble about rent.

Mrs. H. had to pay him two dollars per month advance rent before he would sign for her. She is a poor woman whose husband is ill. Some friends have sent him to the mountains for a year and she must support two small children. It is too bad such landlords do not come under some law that would punish them for such actions.

It is an every-day experience having owners call or write to have existing licenses removed, thus depriving their tenants of the privilege of doing any kind of public work at home in the hope that this will cause the tenants to agree to pay an advance in their rent. When a license is removed a notice is sent to both the tenant and to the employer notifying them of that fact. If the tenant succeeds in obtaining work from some other employer and persists in working, then the owner complains to the Department demanding that we stop the illegal acts of the tenants. We, in turn, must follow the directions given in the law, visit the premises complained of and file a report. If a violation is found, a personal notice is served on the owner under section 365, placing on him the duty of either relicensing his house or hauling the offending tenants to court in dispossess proceedings. We merely cite these circumstances as an indication of the many difficulties which the division has to contend with. The following letter from one landlord illustrates the above statement:

NO. 884 ——— AVENUE,
BROOKLYN, N. Y.

GENTLEMEN: I want to complain about a tenant in No. 183——— street, Ridgewood, for doing homework without permit. Please attend to this.

(Signed) OWNER.

This landlord had previously consented to the licensing of his house. Then when he could not get more rent from the tenant, he ordered the license to be cancelled, which was done. Then, when the tenant succeeded in obtaining work from some other employer he sent in this complaint.

The strike in the clothing industry which started last December has since that date caused a large decrease in homework. This is most noticeable in localities where ready-made clothing is manufactured in large quantities. This condition is reflected in the excessive number of licensed tenement houses (12,043) given in the table in which no work was found going on at the time visitation was recorded by the inspectors. It can be noticed in the increase in other lines of homework, notably in lace embroidery, bead work and miscellaneous articles. The worst effect of the clothing strike on homeworkers is found in the marked decrease in the prices paid for finishing garments. The high peak of prices reached three years ago has been wholly lost to the homeworkers, and those who are now able to obtain work are back to pre-war prices and even below the prices paid then. Overcoats that paid as high as forty cents per garment to finish have now fallen to half that price. Men's jackets that paid as high as seventeen cents each have dropped back to eight or nine cents and very little work is to be had at that price.

The following is a summary of the work performed by the field force of the Division of Homework Inspection during the year beginning July 1, 1920, and ending June 30, 1921:

Number of outstanding licenses on July 1, 1920, for whole State	18,445
Number of new applications for licenses made during the year, including 16 applications pending at close of year	2,588
Number filed in New York City	2,382
Number granted in New York City	2,276
Number filed in up-State localities	190
Number granted in up-State localities	189
Number of licenses cancelled for sanitary or other reasons	3,515
Number of licenses revoked for purely sanitary reasons	313
Number of applications cancelled	137
Number of applications pending at close of report year	18
Number of outstanding licenses at close of year June 30, 1921	17,082
Net decrease in licensed buildings for year	1,363
Number of licensed tenement houses inspected and reinspected	24,930
Number of licensed rear shop buildings inspected	159
Total of all inspections of licensed buildings	25,089
Licensed tenement houses receiving a second inspection during the year	6,744
Number of licensed tenement houses in which no person was found at work at time of visit	12,043
Total number of observation reports made of houses suspected of having work done in them, as well as dwelling houses reported from the investigation of manufacturers' lists	5,471
Number of violations of law reported requiring application of tenement tag	1,179
Number of violations referred to counsel	114
Number of violations prosecuted	*63
Number of convictions secured	48
Amount of fines imposed by courts	$710

---

* Including two cases that were pending on June 30, 1920.

Violations of law upon which prosecutions were based:	
Children under 14 working	9
Children between 14 and 16 years working without certificates	1
Prohibited articles, working on	12
Unlicensed houses	40
No label on articles	1
Number of hours spent by inspectors in prosecuting cases	382½
Number of separate complaints received, all of which were investigated and reported on	221
Total number of separate apartments visited and inspected	305,802
Total number of apartments in which work was reported	17,537
Number of persons found at work in licensed houses	24,297
Number of cases of disease found in homes where work was found going on	0
Number of cases of disease found in licensed tenements	8
Number of all orders issued	3,964
Number of compliances secured	4,278
Number of visits made by inspectors to secure compliances	9,050
Total number of all children found at work illegally in home	*518
Females	436
Males	82
Number of children between 14 and 16 found working	100
Females	95
Males	5
Number of children working and attending school	460
Number of children working and not attending school	58
Ages of children under 14 years —	
4 years	1
6 years	22
7 years	17
8 years	28
9 years	39
10 years	64
11 years	58
12 years	90
13 years	99

The time at which these children were found is recorded as follows:

Children found in morning up to 12 o'clock	193
Children found employed between 12 and 3 P. M.	122
Children found employed between 3 and 6 P. M.	193
Children found employed between 6 and 8 P. M.	9
Children found employed after 8 P. M.	1

The children were found working on the following:

Article of embroidery and lace	90
Adult clothing	208
Prohibited articles	9
Flowers and feathers	65
Miscellaneous articles, paper novelties, etc	146

Of the 518 children found at work illegally in homes, 475 were in New York City and 43 were found in up-State localities.

Child labor as found in the home shows a marked falling off this year when compared with that reported the year previous. Last year the reports showed a total of 781 children at work in the homes while this year's report shows a total of 518 children so employed,

---

* There were 447 children found illegally employed in licensed tenements; 362 of these were under 14 years of age and 85 between 14 and 16 years of age.

a net decrease of 263. This decrease is shown to be wholly in New York City, up-State places showing about same numbers as the year before.

This showing is very gratifying in view of the fact that the inspectors covered 6,528 more houses this year than were inspected last year; also in view of the additional fact that the inspectors visited 49,080 more separate apartments this year than were visited the previous year. While some of this decrease in child labor can be charged to the stoppage of work due to the clothing strike, the major part of the decrease is directly due to the vigilance of the men and the women in the field.

It may be of general public interest to state here the different races the people belong to who are found engaged in doing this so-called homework. In times past the only persons who did work in the home — that is, made a business of it — were the custom tailor, dressmaker and the milliner, all private and personal work. while the workers were as a rule native Americans. Today the number of different articles that are made cover a wide range outside of custom work. The people who are engaged in the work are largely foreigners and the number of Americans is negligible in comparison. The different nationalities and races employed in licensed tenements are compiled from the daily reports of the inspectors and are as follows:

Italians	11,388	Norwegians	13
Jews	7,526	Danes	10
Americans	2,365	Syrians	17
Germans	997	Cubans	16
Greeks	342	Roumanians	14
Hungarians	256	Swiss	17
Irish	152	Scotch	17
Austrians	122	Belgians	7
French	141	Porto Ricans	3
Poles	282	Turks	2
Negroes	115	Holland-Dutch	2
Russians	95	Serbians	3
Spaniards	73	Galicians	3
Bohemians	79	Portuguese	1
English	56	Pomeranians	14
Slavs	33	Lithuanians	44
Armenians	27	Mexicans	1
Swedes	55	Ukrainians	1
Finns	9		

It may also be of interest to state the different articles which furnish the employment we find in the home, and the number of persons found engaged on them in licensed tenements:

Articles of individual custom clothing	8,518
Articles of ready-made or shop finished clothing	6.540
Flowers	1,148
Feathers	76
Articles of lace and embroidery	4.161
Gloves	479
Articles for children	57
Carding buttons, hooks and eyes	84

Different and small articles not included in the above list	3,234
Total of all persons found employed in the licensed tenement houses in this State	24,297

INDUSTRIAL HYGIENE DIVISION

This report deals with the seventh year of the Division's work and comparison with the reports of former years shows the progress made.

The activities of the Division are shown by the following subject matters dealt with, namely, the investigation of special trades and processes, the investigation of cases of occupational diseases, together with physical examination of children (males and females) in factories, the examination of plans filed relating to ventilating systems, and special work, principally of a technical nature, involving the use of instruments of precision.

Investigation of Special Trades and Processes

During the year the Division undertook an investigation relating to unsafe practices in general, common in most factories, with the idea of determining to what extent employees were injured through the medium of so-called carelessness, of not having instructions as to the proper method of running certain machines, through slipping, falling, fooling, failure to understand orders, through overcrowded machinery, etc. During the course of this investigation there has been a large amount of valuable data received. However, the scope of the investigation is so great that before a complete survey can be made the work must be continued.

In connection with an investigation of working conditions of stone cutters who were subjected to the presence of large volumes of hard stone dust, disengaged in the process of cutting and surfacing stone used for monumental and structural purposes, there have been studies made of devices for controlling dust disengaged in the process of surfacing granite.

Valuable data, including photographs of the devices, were obtained, which, when applied to the above processes, will materially aid to improve the working conditions and lessen the danger to workers engaged in dressing stone, many of whom in the past have suffered from such diseases as bronchitis, laryngitis, conjunctivitis and tuberculosis.

A study of woodworking plants was made during the year for the purpose of controlling the fire hazard and protecting the health of employees in such establishments. This work is completed and an illustrated pamphlet is ready for publication as a means of showing manufacturers, contractors and engineers the methods used in certain factories where the successful removal of dust, chips, blocks and shavings has been accomplished.

Special Bulletin 101, entitled "Asphyxiation in Garages and Other Automobile Accidents," has likewise been in demand, with the result that numerous garages have adopted forced means of ventilation for the removal of the poisonous gases found in garages as a result of the incomplete combustion of gasoline from automobile engines.

Special Bulletin 102, entitled " Devices for Sanitary Control of Material Disengaged in Industrial Processes," has fifty-seven illustrations which depict in half-tones the best devices used by many manufacturers of the State to remove dust, gases, vapors and fumes. This pamphlet has been eagerly sought by the engineering profession, as well as by many contractors and manufacturers.

Investigation of Occupational Diseases and Physical Examination of Factory and Mercantile Workers

The medical inspectors attached to the division were constantly engaged in the investigation of conditions under which certain workers toiled who were reported to be suffering from occupational disease reported by physicians who had been called for medical treatment.

In numerous instances as a result of investigations made in the establishments in which such persons had been employed and where unhygienic conditions existed, recommendations were made or orders were issued to correct the conditions so as to prevent a recurrence of similar diseases.

In addition to reported cases, the medical inspectors visited numerous factories throughout the State where wood alcohol, paints, lacquers, metallic lead and dry colors were used in connection with the various manufacturing processes, with the idea of detecting cases of disease occasioned by their employment. If cases were found, remedial measures were taken to prevent recurrence of similar cases by recommendations or the issuance of the necessary orders.

The examination of children between the ages of 14 and 16 years, having certificates of employment in mercantile establishments in the State, was undertaken to determine the physical fitness of the children for their work. These examinations were, in all cases, conducted at the establishments where the children were employed, and the result of these examinations shows the necessity of advising the children as to habits of living and personal hygiene. Along this line 485 physical examinations were made in New York City. There were also a large number of physical examinations of women made and advice was given them in numerous instances.

Examination of Plans for Ventilating Systems

Every order relating to general ventilating, local ventilation and exhaust systems issued by the Bureau of Inspection requires plans to be filed in ink, in triplicate, for approval, before changing, repairing or providing new systems. All plans relating to the above orders were referred to the Division of Industrial Hygiene for approval. When disapproved all errors that existed were noted and corrections to be made were clearly pointed out in accompanying letters to the proprietor, contractor or engineer whereby it became an easy matter to amend or correct them and receive approval upon refiling. Weekly conferences of those members of the division to whom this work was assigned were held, whereat the more difficult problems which had been met during the week were discussed. These conferences resulted in the dissemination of information relating to the specific problems encountered, which became general information to all, and could be applied to other problems as they would occur. It occasionally became necessary, where problems of an intricate or specific nature presented themselves within factories, to arrange conferences at the factories between the firm, contractor or engineer and a representative of the division, whereby in every instance the difficult problems in question were solved with gratifying results to all concerned.

The time devoted to this branch of sanitary work has resulted in the installation throughout the State of more durable ventilating systems, with higher percentages of efficiency, giving greater protection to those who were obliged to work under conditions where the presence of dust, fumes, gases, heated air and vapors had previously permeated the atmosphere of the establishment.

Special Work

During the year there were 684 matters referred to the Division. The greater part of these were in the form of requests for technical evidence relating to orders which had been issued by the Department and involved the necessity of conducting physical examinations of persons affected by the orders issued; the making of air tests and chemical analyses of material handled; analyses of wall dust and other materials involving microscopical examinations; the carrying on of photometric measurements to determine the intrinsic brilliancy of various types of light units and of existent light flux on the working plane in various trades and processes. This was done by means of our own photometers in the field and necessitated the work being carried on at night.

Photographic work formed a part of this special work, relating to accidents, guards, unsanitary and sanitary conditions, special devices, exhaust system work, types of ventilating hoods and processes involving the unsafe way of handling material and tools. From year to year the collection of photographs and lantern slides has been added to, which serves as a means of conveying information relating to the Labor Law and the Industrial Code.

Several hundred of these photographs were exhibited at the State Fair held at Syracuse, together with lantern slides exhibited in a stermotorgraph. This exhibit attracted great attention, particularly by those interested in devices relating to factory conditions.

Some of the photographs were reproduced in half-tones in several bulletins prepared by the Division during the year as a means to convey to the engineering profession, manufacturers and contractors, suggestions as to the equipment of machines in various ways to comply with the law and code.

Such instruments as thermometers, hygrometers, air meters, speed meters, pitou tubes and tachometers, were indispensable in our work as a means toward definitely determining temperatures, percentages of relative humidity, speed of fans, capacities of fans, velocities of air in ducts of ventilating systems and speed of belts, which often were used in connection with cases of prosecution begun by the Bureau of Inspection.

The following figures recapitulate the work done during the year, which has exceeded in volume that of any other year of the Division's existence:

Resume of the work undertaken and completed:

Bulletins in preparation	2
Bulletins prepared to date	2
Bulletins issued during past year	2
Photographs taken in connection with work	96
Chemical analyses made in connection with investigations	120
Special inspections	4
Complaints investigated	4
Compliance visits	12
Trade disease investigations	17
Special investigations	5,533
Physical examinations	1.512
Physical determinations	2.137
Research investigations	899
Special details	1,006
Plans examined	1,136

DIVISION OF BOILER INSPECTION

There were inspected during the fiscal year 2,705 boilers of all classes coming within the provisions of section 204 of the Labor Law, and 395 compliance visits were made to see that orders issued were complied with.

It was necessary to attach "unsafe" tags to 32 boilers on account of their unsafe condition and owners or operators having failed to comply with the provisions of the law.

There were 3,688 investigations and information calls made relative to boilers.

Fees paid for the boilers inspected amounted to $12,465.

During the year there has been but one boiler explosion in New York State; the tubes in a water tube boiler ruptured, scalding three of the boiler attendants.

Twenty boilers have been condemned owing to the general deterioration and lap seam cracks, and in each instance the use of the boilers was discontinued.

The insurance companies have filed reports relative to the inspection of 23,315 boilers.

Boiler manufacturers have filed data reports relative to 3,072 boilers manufactured for installation within the State.

Owing to the limited number of inspectors it has been impossible to make an annual internal and external inspection of all boilers as required by law. For the same reason no attempt has been made to inspect the numerous small boilers such as are used on clothes pressing machines and vulcanizing moulds. It has been recommended that a code applying to miniature boilers be adopted. The majority of this type of miniature generators (cast iron vulcanizers) that are now in use constitute a serious menace, especially owing to the fact that many of them are operated by inexperienced persons who do not realize the hazard from the improper operation of such generators.

Attention is called to the need of a uniform method of inspection as provided for in the boiler code, but not complied with in the cities of New York, Yonkers, Mt. Vernon and Niagara Falls. In New York City the Police Department applies hydrostatic pressure to all boilers, but does not make internal inspection of boilers as required by the provisions of the boiler code. Therefore, where boilers are not regularly inspected by insurance companies, no internal inspection is made and conditions are not noted which might warrant a reduction in the pressure. In other cities which have their own local inspectors, a hydrostatic pressure test is applied to such boilers as are not inspected by authorized insurance companies. Section 204 of the Labor Law provides that cities in which boilers are regularly inspected by competent inspectors acting under authority of local laws or ordinances shall be exempt from inspection by the Department of Labor, but that said cities shall enforce the provisions of the boiler code. Rule 800 of the code provides that all boilers carrying a steam pressure of more than 15 pounds per square inch shall be subjected to internal and external inspection annually. The method enforced in these cities of applying hydrostatic pressure tests is antique and unsafe, inasmuch as many boilers have been ruined by being stressed beyond the point of elasticity by the use of hydrostatic pressure applied by inexperienced or careless persons. In the city of New York, except in the instances mentioned with reference to the method of inspection, the Police Department has endeavored to comply with the requirements of the code with reference to installation and fittings, and is co-operating with the Division of Boiler Inspection. However, no effort is being made by local inspectors of other cities to see that the requirements of the boiler code are complied with. It is, therefore, recommended that section 204 of chapter 50, Laws of 1921, be revised to apply to all cities except New York City, and that New York City be required to revise its method of inspection to conform to the State law.

This recommendation is prompted by the need of uniform inspection throughout the State. This is also due to the fact that each of these municipalities and the State require separate inspections if the boiler in question is to be moved and operated at various points within the State. This causes needless expense and some dissatisfaction but is necessary when boilers are removed from the municipalities mentioned to places under State inspection where they must be inspected as required by law. Further dissatisfaction is created owing to the municipality not enforcing the requirements of the code with reference to fittings and appliances.

The Board of Examiners, as provided for in rule 8 of the boiler code for examining candidates desiring to secure a certificate of competency to inspect boilers in New York State, holds examinations every ninety days. Out of a total of forty-three candidates who took the examination, fifteen failed to pass the examination. The members of this board serve without compensation and are deserving of thanks for the interest and attention they have given to these examinations.

MINES, TUNNELS AND QUARRIES

This work has progressed in the usual efficient manner, and during the year there were three hundred mine and quarry inspections, and thirty regular and two hundred and seventy-nine special inspections of tunnels and caissons. All of this class of inspection requires careful and painstaking work in order to observe conditions that will eliminate all hazards and promote safe working conditions, so that the workers in these industries may be afforded the full measure of protection contemplated by the Labor Law and the code rules.

ACCIDENT PREVENTION

The results secured in accident prevention are very encouraging, and the diligent efforts of past years are showing gratifying results. While we have continued our vigorous policy relating to accident prevention, we have had the assistance of the enlightened and progressive managers of factory and mercantile establishments, who are fully alive to the wisdom and necesssity of the prevention of needless industrial accidents and the reduction or elimination of the unnecessary waste caused by industrial injuries. We fully realize that the guarding of machinery in unsafe places is but incident to the ideal for which we all strive. It can be said that in New York State we have obtained splendid results and from now on we should devote our energies along educational lines to a greater degree than has been done in the past. In many of the larger plants excellent results have been obtained by instructing the employee in the safe practices incident to the particular industry, the type of machinery in use and the practical and common sense way of doing the job to be done. In many industries this can be done because of the ability to employ those who can do it and because the management knows it pays. But what is to be done in the many thousands of establishments not progressive enough to do the job, or those not in a position to employ those who know what to do, and the other class who do not care — that type who tell you, " I have paid my insurance premium, why should I worry? " Because we realize the need for greater efforts along educational lines promoting safe practices, we started to study the problem as it affects industry generally, with the hope of making available valuable information and data for those conducting industry with the purpose of promoting and developing safe practices, and in this manner eliminate many thousands of injuries occurring annually and which can not be prevented by the guarding of machinery, ways and appliances.

Considering the character of these injuries, it would be advisable for the State to provide the means of properly promoting this work along the many avenues open to obtain excellent results.

To conduct a proper educational campaign to promote safe practices in the industries of New York would require the expenditure of money not available at present, but it is work that should be done as speedily as possible. The employees and managers of many establishments will readily co-operate with the Department of Labor to develop the work along practical lines. There is every indication of the need for methods that will reduce to a minimum those injuries that are occurring which cannot be prevented by the installation of safeguards. They are the result of lack of knowledge as to how to perform the work in a proper manner. To reduce this hazard, we must carefully study the industries producing accidents, the causes, and the best methods of instruction to prevent recurrence of those which may be prevented by the skillful and safe manner of doing the work. Money spent in this line of accident prevention work would tend to the production of large returns to the State, in addition to preventing much suffering and needless loss to the injured, as well as to industry.

PROSECUTIONS

There is little need for saying much regarding prosecutions. The tables appended give a clear review of this phase of the Bureau's activities.

The following tables will furnish comparisons for the past seven years, relative to the number of prosecutions completed and the amount of fines imposed:

	FISCAL YEAR 1915 (12 months)		FISCAL YEAR 1916 (9 months)	
	Prosecutions completed	Fines imposed	Prosecutions completed	Fines imposed
Factories	845	$4,387	1,923	$9,856
Mercantile establishments	876	5,842	840	6,790
Total	1,721	$10,229	2,763	$16,646

	FISCAL YEAR 1917 (12 months)		FISCAL YEAR 1918 (12 months)	
	Prosecutions completed	Fines imposed	Prosecutions completed	Fines imposed
Factories	2,835	$25,250	1,301	$13,755
Mercantile establishments	1,617	12,385	934	7,950
Total	4,452	$37,635	2,235	$21,705

	FISCAL YEAR 1919 (12 months)		FISCAL YEAR 1920 (12 months)	
	Prosecutions completed	Fines imposed	Prosecutions completed	Fines imposed
Factories	1,656	$12,890	1,661	$12,720
Mercantile establishments	1,155	7,085	1,072	9,550
Total	2,811	$19,975	2,733	$22,270

FISCAL YEAR 1921
(12 months)

	Prosecutions completed	Fines imposed
Factories	1,074	$7,985
Mercantile establishments	371	3,135
Total	1,445	$11,120

SPECIAL CALENDAR

During the past fiscal year there has been inaugurated a method whereby those who failed to comply with an order within a reasonable time, or those who violated the laws relative to child labor, illegal hours or day-of-rest, were summoned to appear before the Counsel of the Department and the Director of the Bureau of Inspection to show cause why they should not be prosecuted.

This plan was adopted to relieve the courts of certain cases, which, although violations of law, in many instances related to a class of orders with which compliance could be readily secured without the expenditure of much money. In the development of this plan, it was found advisable to extend its scope to other classes of orders which had not been complied with within a reasonable time, also to first violations of the child labor, illegal hours and day-of-rest laws.

We find that this method of operation stimulates compliance and reduces the amount of time spent by the inspectors in court. On the appearance of a person having failed to comply with the orders, he is asked to explain his failure to comply. In many instances the orders have been complied with between the receipt of the summons and the date of appearance. Where they have not been complied with, the firm is given one or two weeks in which to comply, according to the nature of the orders. If there is any misunderstanding as to how a compliance can be made, a full explanation is given. If, on the visit of the inspector to the premises on the date fixed at the hearing, the order is not complied with, the case is presented to the court. In instances where the offense is a first violation of child labor, illegal hours, or day-of-rest laws, the application of the law is fully explained and the violator advised that his establishment will be under close surveillance, and should a second violation be found, a prosecution will follow. The method of keeping our records will clearly indicate a second violation.

This plan has promoted compliance with orders issued and given evidence of very satisfactory results in relieving the Bureau of work in prosecuting for a class of orders that can be easily complied with at a very moderate cost.

NON-INSURANCE

During the past fiscal year when the inspectors of the Bureau found employers who had failed to provide compensation insurance for the protection of their employees, a summons was issued directing them to appear at the office of the Department to show that insurance was being carried, or be prosecuted for failure to do so.

The beneficial result of this policy is clearly demonstrated and has been the means of providing compensation insurance for many thousands of workers. This method has also been the means of providing protection for the employees of proprietors who either wilfully or carelessly fail to provide such protection until compelled to do so by the Department of Labor.

JAMES L. GERNON,
Director, Bureau of Inspection.

STATISTICS OF INSPECTION

(Compiled by the Office of the Chief Statistician)

Factory Inspection

1. Work of factory inspectors.
2. Work of factory inspectors in year ended June 30, 1921, by supervising districts.
3. Compliances with orders reported by the Division of Factory Inspection in year ended June 30, 1921.
4. Orders issued by the Division of Factory Inspection in year ended June 30, 1921.
5. Orders issued by the Division of Industrial Hygiene and reported compliances therewith in year ended June 30, 1921.

6-A. Prosecutions for violations of the Labor Law in factories.
6-B. Prosecutions for violations of the Labor Law in factories (concluded).

7. Violations of the Labor Law in factories, referred to counsel without issuance of orders in year ended June 30, 1921.
8. Children found illegally employed in factories in year ended June 30, 1921.
9. Children for whom proof of age was demanded in factories in year ended June 30, 1921.
10. Children found at prohibited employment in factories in year ended June 30, 1921.
11. Children 14 to 16 years of age found employed in factories in year ended June 30, 1921.
12. Complaints, alleging violations of the Labor Law in factories, investigated in year ended June 30, 1921.
13. Illegal hours and prohibited employment of women and minors in factories in year ended June 30, 1921.
14. Violations of day-of-rest law in factories in year ended June 30, 1921.

Homework Inspection

15. Work of homework inspectors.
16. Licensing of tenements in year ended June 30, 1921.
17. Registers of outside workers.
18. Permits to factory owners to send work to tenements in year ended June 30, 1921.
19. Orders issued by the Division of Homework Inspection and reported compliances therewith in year ended June 30, 1921.
20. Children found illegally employed in licensed tenement living rooms in year ended June 30 1921.
21. Prosecutions for violations of the Labor Law in tenement houses.
22. Violations of the Labor Law in tenements referred to counsel without issuance of orders in year ended June 30, 1921.

Mercantile Inspection

23. Work of mercantile inspectors, 1914 to 1921.
24. Work of mercantile inspectors, by localities.
25. Orders issued by the Division of Mercantile Inspection in year ended June 30, 1921.
26. Compliances with orders reported by the Division of Mercantile Inspection in year ended June 30, 1921.
27. Prosecutions for violations of the Labor Law in mercantile establishments.
28. Violations of the Labor Law in mercantile establishments referred to counsel without issuance of orders in year ended June 30, 1921.
29. Children found illegally employed in mercantile establishments in year ended June 30, 1921.
30. Children for whom proof of age was demanded in mercantile establishments in year ended June 30, 1921.
31. Children 14 to 16 years of age found employed in mercantile establishments.
32. Illegal hours of women and male minors and prohibited employment of female minors in mercantile establishments in year ended June 30, 1921.
33. Violations of day-of-rest law in mercantile establishments in year ended June 30, 1921.
34. Complaints, alleging violation of the Labor Law in mercantile establishments, investigated.

Industrial Diseases

35. Cases of industrial disease reported to Department of Labor under section 206 of the Labor Law in ten years.

Employment Certificates

36. Child labor certificates reported issued in year ended June 30, 1921, exclusive of vacation certificates.
37. Child labor certificates reported issued in July and August, 1920, for summer vacation employment.

Table 1 — WORK OF FACTORY INSPECTORS

KIND OF WORK	YEAR ENDED JUNE 30, 1921			Twelve months ended June 30, 1920
	First Inspection District	Second Inspection District	Total State	
Number of regular inspections of:				
Factories occupying whole buildings	8,123	14,204	22,327	21,588
Tenant factories	43,472	5,409	48,881	47,302
Bakeries	54	1,511	1,565	1,436
Total	51,649	21,124	72,773	70,326
Number of special inspections (with or without orders)	12,576	5,789	18,365	16,564
Number of complaint investigations	619	197	816	1,206
Number of building surveys	45,642	20,266	65,908	52,059
Number of special investigations	5,508	1,796	7,304	5,509
Number of employees at time of inspection	756,692	594,061	1,350,753	1,507,876
Number of compliance visits:				
First visits	35,433	12,477	47,910	47,630
Subsequent visits	38,491	19,496	57,987	60,648
Total	73,924	31,973	105,897	108,278
Number of tagging cases (exclusive of "assisting"):				
Unclean factories (Sec. 297)	40	2	42	64
Unclean bakeries (Sec. 336)	....	1	1	1
Dangerous machinery (Sec. 256)	114	59	173	304
Scaffolds (Sec. 240)	....	4	4	....
Total	154	66	220	369
Number of department office calls	5,423	984	6,407	8,157
Number of factory information calls	19,745	2,287	22,032	17,575
Number of factories closed or vacated	2,305	2,303	4,608	4,303

---

* The total compliances, reported for the First Inspection District, include the waival of 1,665 orders issued prior to July 1, 1920, and 5,019 orders issued between July 1, 1920 and June 30, 1921. These waivals resulted from the cessation of the illegal conditions by reason of modifications of the law, Industrial Code, or accompanying circumstances such as to make the original orders no longer necessary.

† The total compliances, reported for the Second Inspection District, include the waival of 1,824 orders issued prior to July 1, 1920, and 1,501 orders issued between July 1, 1920, and June 30, 1921.

Note.— See Table 5 for factory compliances reported by the Division of Industrial Hygiene.

(a) Comprises New York City and Glen Cove.

(b) Comprises all cities other than New York City and Glen Cove.

* Added in April, 1921.

† Includes 16 compliances in localities other than cities.

‡ Includes 101 compliances in localities other than cities.

§ The total compliances include the waival of 3,049 orders. These waivals resulted from the cessation of the illegal conditions by reason of modifications of the law or Industrial Code, or accompanying circumstances such as to make the original orders no longer necessary. The distribution of the 3,049 orders was as follows: in the First Inspection District, 656 and 1,165 on orders issued prior to July 1, 1920, and between July 1, 1920 and June 30, 1921, respectively; in the Second Inspection District, 567 and 661 on orders issued prior to July 1, 1920, and between July 1, 1920 and June 30, 1921, respectively.

† These certificate were issued under authority of section 165-a of the Labor Law, which permits the employment of children, 14 to 16 years of age, in mercantile establishments and business offices during July and August, notwithstanding the fact that the children have not completed the grades in school, necessary for obtaining a regular employment certificate.

PART III

REPORT OF DIRECTOR IN CHARGE OF BUREAU OF WORKMEN'S COMPENSATION

REPORT OF DIRECTOR

IN CHARGE OF BUREAU OF WORKMEN'S COMPENSATION

To the Industrial Commissioner:

I submit herewith report of the Bureau of Workmen's Compensation of the New York State Department of Labor for the fiscal year ending June 30, 1921, including a statement of the operations under the amendments to the compensation law effective July 1, 1921, which radically changed the method of handling claims for the period ending December 31, 1921.

Following the reorganization of the Department of Labor and your appointment as The Industrial Commissioner I was appointed director of the Bureau of Workmen's Compensation April 30, 1921, succeeding William C. Archer. The report therefore covers ten months of the bureau under the direction of Mr. Archer for the fiscal year and two months under that of the writer with a summary of the six months' experience since.

The divisions of the bureau have remained practically the same although there has been a material rearrangement of the office force and change in the office system. A report of the work of each division follows.

Claims Division

The claims division is naturally the largest division in the bureau. Its function is to receive the injured employee's notice of injury and later his claim for compensation, the employer's report of injury, the physician's report and other papers which go to make up a case. The claims are all indexed both as to employer and employee and the utmost care is taken to have in the folder all the papers necessary to facilitate prompt handling of the case and ready decision by the referee. When deemed advisable an investigation is made, the claimant and others being visited in their homes or other places. Other detail work of the claims division consists in handling the notices of accidents, indexing same, personal interviews with the claimants, sending out notices of hearings, making up calendars, and otherwise preparing the claims for hearing and determination by the conference examiners, the referees, and the Industrial Board; also clerical work at the hearings, interpretations, and sending out notices of awards.

Statistical information for the number of accidents, number of claims, number of agreements and number of deaths is given in the following table:

TABLE OF ACCIDENTS, CLAIMS, AGREEMENTS AND DEATHS
July 1, 1914, to June 30, 1921

	Number of accidents	Number of claims	Number of agreements	Number of deaths
July 1, 1914, to June 30, 1915	225,391	33,265	8,400	812
July 1, 1915, to June 30, 1916	276,386	18,215	32,646	1,366
July 1, 1916, to June 30, 1917	313,406	22,673	35,889	1,570
July 1, 1917, to June 30, 1918	286,871	21,551	30,647	1,504
July 1, 1918, to June 30, 1919	288,444	21,657	28,448	1,815
July 1, 1919, to June 30, 1920	345,672	*53,512	*12,206	1,236
July 1, 1920, to June 30, 1921	294,469	49,771	5,647	1,177
Totals	2,030,639	220,644	153,883	9,480

TABLE OF ACCIDENTS, CLAIMS, AGREEMENTS AND DEATHS
July 1, 1920, to June 30, 1921

DISTRICTS	Number of accidents	Number of disability claims (other than agreements)	Number of agreements	Number of death claims
1. New York	187,854	27,109	3,500	630
2. Albany	26,218	7,225	152	194
3. Syracuse	22,078	5,414	521	81
4. Rochester	25,615	4,177	679	112
5. Buffalo	32,704	5,846	795	160
Totals	294,469	49,771	5,647	1,177

---

* The increase of claims over agreements is due to change in the law.

Medical Division

The work of the medical division is closely correlated with that of the claims division since the physical examinations of claimants are usually made during the hearings at the request of the referee or other presiding officer. In New York City the bureau maintains salaried employees, the doctors being upon a full time basis. At the other offices the doctors are compensated upon a fee basis. The medical examinations are made in a fair and impartial manner. The aim is not only to have the injured employee feel that justice has been accorded him but to have the employer and others interested know that the medical aspects of the claim are given intelligent and conscientious consideration. Whenever requested, medical testimony is reviewed and reports thereon are made to the referees and members of the Industrial Board.

The following table summarizes the physical examinations made by the Medical Division.

CLASSIFICATION OF PHYSICAL EXAMINATIONS, INCLUDING RE-EXAMINATIONS

	July, '20, to June, '21	July, '19, to June, '20*	July, '18, to June, '19	July, '17, to June, '18	July, '16, to June, '17	Oct., '15, to June, '16	July, '14 to Sept., '15

---

* Figures for July, 1919, to June, 1920, not available.

In addition, the Medical Division during the year ended June 30, 1921, rendered 114 opinions in death cases and 133 opinions in the interpretation of X-ray plates.

Investigators' Division

This division attends to the personal investigation of claims when necessary. This includes the investigation of disability claims and death claims. The division also does considerable follow-up work to make sure that the injured employee receives not only proper medical treatment but also that degree of rehabilitation which properly comes under section 13 of the law, the intention being to render an efficient after-care service. Investigations of applications for lump sum settlements and in some instances lump sum final adjustments are made by this division and care taken to go thoroughly into the cases before recommendations for such settlements are made.

PERSONAL INVESTIGATIONS — NEW YORK CITY

July 1, 1920, to June 30, 1921

Disability	Death	After-care	Lump sum
357	335	336	149

Few personal investigations are made in the other offices of the bureau but when necessary a member of the regular office force is assigned to that duty.

Hearing Division

The Labor Law provides that The Industrial Commissioner shall appoint as many referees as may be necessary to hear and determine claims for compensation under rules adopted by the Industrial Board and that the decision of the referee on a claim shall be deemed the decision of the Industrial Board unless the Board on its own motion or on application modifies or rescinds such decision.

There are at present nine referees — eight hearing disability claims and one death claims. Hearings are held continuously in New York City and at stated intervals in the up-State cities where the bureau offices are located and in other cities having a considerable industrial population. Expressed in counties, hearings are held in 44 out of the 62 counties of the State. Counties such as Kings, Queens, Bronx, Madison, Richmond and Rensselaer, on account of their close proximity to the district offices of the bureau, and counties such as Hamilton, Lewis, Putnam and Washington, on account of lack of industries, have no hearing places. On the other hand, some counties, on account of large area and scattered industrial activity, have two and three regularly scheduled hearing cities. The aim is to bring the workmen's compensation court as near to the injured employee and his employer as may be consistent with economy of time and money. There is also one examiner of claims who acts as referee a good share of the time and an examiner in each office who holds the conference calendar hearings.

HEARINGS BY COMPENSATION DISTRICTS

July 1, 1920, to June 30, 1921

DISTRICT	Dis-ability	Occupational diseases	Medical	Lump sum	Final adjustment	Death	Total cases on calendar
1. New York	76,697	20	2,353	1,110	7,697	630	88,507
2. Albany	14,754	9	14	30	191	194	15,192
3. Syracuse	10,826	13	58	11	70	81	11,059
4. Rochester	12,047	12	43	52	352	112	12,618
5. Buffalo	12,374	12	12	35	242	227	12,902
Totals	126,698	66	2,480	1,238	8,552	1,244	140,278

During the year, 1,304 motions were made for reopening and rehearing of cases. Of the total number of cases on the calendar, 1,705 were heard before the Commission.

Self-Insurance Division

The principle of self-insurance is well established in this State. Nearly 400 employers have elected to become self-insurers; 59 counties, cities and other political subdivisions operate under it. It is the purpose so to conduct the work of this division that the privilege of self-insurance will be granted only to employers who are financially able to pay the compensation awards which may be made to their injured employees or in case of death, to their beneficiaries, and that, in addition to receiving The Industrial Commissioner's approval, the securities deposited with the Commissioner shall be of such character and in such amount as to further guarantee that injured employees will surely receive their compensation. Total deposits with The Industrial Commissioner at the present time amount to over $8,250,000.

Election to Come Under Act Division

The law requires that a written statement be filed with the Industrial Commissioner by an employer electing compensation when not subject to the compulsory provisions of the law. This notice of election not only declares that the employer accepts the provisions of the Workmen's Compensation Law but states that the payment of compensation has been secured. It is the work of this division to see that these notices of election receive The Industrial Commissioner's approval; to make sure that the compensation is properly secured and to attend to other matters in connection with this class of employers. It also receives employer's notices of insurance, cancellation of policies, etc.

Non-Insured Employers' Division

Every uninsured employer in New York State whose employees are engaged in hazardous employments should secure workmen's compensation insurance to his employees in one of the ways provided by law. Through the work of this division numbers of non-insured employers have taken out workmen's compensation insurance and if the employer refuses to secure the compensation to his employees court proceedings are instituted. If the employer is located in the New York City district and does not respond to the summons served on him a personal investigation is made. Whenever an award to an injured employee is made against a non-insured employer every effort is made to see that such award is collected. If necessary legal action is taken against the employer. The decision of the Court of Appeals in the case of *People* v. *Donnelly,* 232 N. Y. 423, January 24, 1922, sustained the right of The Industrial Commissioner to prosecute employers for not carrying insurance under section 52 of the Compensation Law; also the right to prosecute them for not paying awards to their injured employees.

NON-INSURED EMPLOYERS

July 1, 1920, to June 30, 1921

DISTRICTS	Employers served with summons	Employers securing insurance	Employers not required to insure (not under law)	Legal action take
New York	6,201	4,961	1,240	12
Up-state	1,200	1,096	104	1
Totals	7,401	6,057	1,344	1

In the New York district, 852 awards were made against employers who were uninsured. Prosecutions were begun against 265 of these employers, resulting in twelve imprisonments and the imposition of $4,785 in fines.

Industrial Board

The Labor Law provides for an Industrial Board of three members with power among other things to hear and determine all claims for compensation. Certain matters may come directly before the Board, as original hearings, questions involving public policy, questions of jurisdiction and questions of like importance. The Board hears all motions for rehearing, or for opening defaulted cases, all cases where application is made to it for review of a referee's decision, and also cases which are to be tried for the first time when it so determines.

It is a part of the function of the bureau to prepare the claims for hearing before the Industrial Board, send out the notices of hearings, furnish the calendar clerks and notify the parties of the decisions and awards of the board. The Board holds hearings in the New York City district three times a week, also frequent special hearings, and hearings in the cities of the up-State districts as occasion requires.

Six Months' Experience Under the New Amendments

Six months have elapsed since the new amendments to the Workmen's Compensation Law went into effect. These months have been strenuous for everyone in any way interested in carrying out the provisions of the Compensation Law. New forms have had to be drafted, new procedure outlined, new methods for handling claims adopted and the law has had to be put into practical operation.

The amendments provide that the compensation shall be paid in like manner as wages, promptly as it accrues, directly to the person entitled, and without waiting for an award. They have revolutionized the method of handling claims. Previously the claimant had to quit work, appear at the hearings, lose pay and take up not only his own and his employer's time but the time of the referee, calendar clerk, hearing stenographer and other employees of the bureau. Sometimes, after repeated adjournment of hearings because of the claimant's non-attendance, he would be brought in only to find that he had gone back to work and that his case should have been closed. Never was the maxim truer, "To delay Justice is to deny Justice". Now this has happily all been changed. The claimant receives his "Notice of Opportunity to be Heard", with detailed statement calculating his compensation, full explanation of his rights and invitation to present himself at the hearing or respond in writing if all is not satisfactory. More than 50 per cent of the claimants do not appear but continue at work. Yet the utmost care is taken to procure their attendance when necessary.

If the employer intends to controvert the claim he must file notice on or before the twenty-fifth day of disability, copy of which is immediately sent to the claimant. Over 43 per cent of the controverted cases involve only minor questions and are quickly disposed of at a conference or trial hearing, leaving relatively only a small number of the total claims filed that involve real controversy. Every effort is made by the Claims Division of the bureau to prepare the controverted cases for early placing on the calendars and the referees are impressed with the importance of prompt decision and award. Such action is facilitated by reason of the fewer cases requiring their adjudication. The new method permits more careful consideration of the individual case and devotion of more time to the aggregate of cases coming before them.

Though the amendments to the law have been in effect only a few months gratifying results are shown. Fifty-six per cent of all injured employees receive their compensation without resort to a hearing. Nineteen per cent of the cases are settled with little difficulty. In only twenty-five per cent is there controversy going to the merits of the claim. While the results so far obtained are most satisfactory, it is believed that as the employer and claimant become more familiar with the operation of the law and a closer personal contact is established even nearer approach to the ideal in the minds of those responsible for the amendments will be reached.

Meetings

(a) Claim examiners. A meeting of the claim examiners in the New York office is held every Monday morning at which matters pertaining to claims are discussed and decisions of the courts reviewed.

(b) Heads of groups. The Claims Division in the New York office is divided into groups; the heads of these groups hold frequent meetings to consider matters relating to the details of office management and the welfare of the office force.

(c) Referees' meetings. The referees attached to the New York office hold meetings from time to time to consider matters relating to the work performed by them.

(d) Other meetings. Meetings of the employees connected with the other divisions of the New York office are held at intervals and general meetings of all employees are occasionally held.

(e) Meetings of all the referees in the State and of the examiners in charge of the several offices are held when deemed necessary.

Districts

For the purpose of administering the Workmen's Compensation Law the State is divided into five districts. The counties included in these districts, with the location of the office of the Bureau of Workmen's Compensation in each of the districts, are as follows:

District No. 1.— New York, Bronx, Kings, Queens, Richmond. Nassau, Suffolk, Rockland and Westchester counties. Headquarters, New York city.

District No. 2.—Putnam, Orange, Sullivan, Dutchess, Ulster. Delaware, Greene, Columbia, Warren, Hamilton, Franklin, Rensselaer, Albany, Schoharie, Otsego, Schenectady, Montgomery, Washington, Saratoga, Fulton, Essex, Clinton and St. Lawrence counties. Headquarters, Albany, New York.

District No. 3.— Jefferson, Oswego, Onondaga, Cayuga, Herkimer, Cortland, Lewis, Oneida, Madison, Chenango, Broome and Tioga counties. Headquarters, Syracuse, New York.

District No. 4.— Monroe, Wayne, Ontario, Seneca, Chemung. Livingston, Steuben, Schuyler, Yates, Tompkins, Orleans, Genesee and Wyoming counties. Headquarters, Rochester, New York.

District No. 5.— Chautauqua, Niagara, Erie, Cattaraugus and Allegany counties. Headquarters, Buffalo, New York.

Permanent Total Disability — Special Fund

An injured employee sometimes loses a hand, an arm, a foot, a leg or an eye when previously he had lost another member or organ which results in permanent total disability although the immediate accident of itself would have caused only permanent partial disability. The special fund created by subdivision 7 of section 15 of the Compensation Law which requires employers in every death case where there are no dependents to pay $100 to the State Treasurer is used for these cases. From this special fund the injured employee is entitled to 66 2/3 per cent of his average weekly wage for the remainder of his life, as special additional compensation after cessation of payments for the permanent partial disability. This provision of the law is most humane and beneficial in its results. The claims examiners and referees are careful to see that such cases are again put on the calendar and awards made for permanent total disability with compensation directed to be paid out of the special fund. Sixteen persons are now receiving this additional compensation. From calculations made by the actuary of the department, however, the payments by employers or their insurance carriers to this special fund must be increased if it is to remain solvent.

Vocational Rehabilitation — Special Fund

An employee totally or partially incapacitated by injury for a remunerative occupation, if given a vocational education, may be able to return to industry and earn a livelihood. An injured employee receiving a vocational education through the Bureau of Rehabilitation of the Department of Education is entitled to additional compensation for his maintenance not exceeding ten dollars per week. Subdivision 8 of section 15 of the Workmen's Compensation Law provides a special fund for this purpose by requiring employers to pay to the State Treasurer $900 in every death case where there are no dependents. Industrial rehabilitation is most important. The bureau is reporting to the Rehabilitation Commission of which the industrial commissioner is a member the names of injured employees who need rehabilitation and is cooperating in other ways with the Bureau of Rehabilitation of the Department of Education.

Occupational Diseases

The Workmen's Compensation Law states that compensation shall be payable for injuries sustained or death incurred by employees engaged in certain enumerated hazardous employments. It also defines "injury" to mean "only accidental injuries arising out of and in the course of employment and such disease or infection as may naturally and unavoidably result therefrom." A definition of the term "accident" approved by the Appellate Division of the Supreme Court, Third Department, and the Court of Appeals states that it is "an unlooked for or untoward event which is not expected or designed." It is further well agreed that "accident" must be due to some particular occurrence at some particular time. Under the New York law, therefore, certain diseases, such tuberculosis, have in particular cases been found to result from accidental injuries, while certain other diseases, such as cataract of the eye due to glare in the glass industry, have not been found to so result.

Accordingly the Legislature amended the Workmen's Compensation Law in 1920 by setting up an entirely new Article (2-A) with a procedure to some extent different from that provided for disability and death claims resulting from accidental injuries. A list of 23 diseases is given which are deemed occupational diseases. The records show that comparatively few occupational disease claims have been filed under this new article. Accurate statistics are not available but it is believed that a majority of all occupational diseases under Article 2-A are due to lead poisoning (Group 2) and a majority of the remainder to poisoning by nitro and amido derivatives (Group 7) or to poisoning by nitrous fumes (Group 9). A number of occupational disease cases are disallowed because they do not come under the law. There were 66 occupational disease cases appearing on the calendars for the fiscal year July 1, 1920, to June 30, 1921. The amount of compensation awarded in these cases was slight in comparison with the total compensation awarded, but a gradual increase in the number of claims can be seen. As the workmen become more familiar with the provisions relating to occupational diseases this increase will doubtless be more pronounced. The cost, however, of the inclusion of the occupational disease article in the compensation law is slight. A more simple procedure and its extension to cover a number of other well known industrial diseases is desirable.

Maritime and Admiralty Cases

Immediately upon the going into effect of the New York Workmen's Compensation Law, July 1, 1914, the question was raised as to whether or not Groups 8 and 10 of section 2 were constitutional in view of section 2, Article III, of the U. S. Constitution which states that the judicial power of the United States shall extend "to all cases of admiralty and maritime jurisdiction." The U. S. Supreme Court decided they were not constitutional in the case of *Southern Pacific Co.* v. *Jensen,* 244 U. S. 205, May 21, 1917. Congress thereupon amended the Federal Judicial Code (see section 24 and 256) to " save to claimants the rights and remedies under the workmen's compensation law of any state." These amendments made October 6, 1917 gave to the Federal District Courts and to the Industrial Boards and Commissions concurrent jurisdiction over industrial accidents occuring in admiralty. The U. S. Supreme Court declared these amendments unconstitutional May 17, 1920, in the case of *Knickerbocker Ice Co.* v. *Stewart,* 253 U. S. 149, holding "that the amendment to the Judicial Code did not confer jurisdiction of maritime injuries upon the Commission since Congress alone had the power to legislate in respect to matters coming within the admiralty and maritime jurisdiction and that it could not delegate such legislative power to the states."

Thus we have seen the two attempts of the New York industrial commission supported by the New York courts to give to longshoremen and repair men on docks the rights and benefits of our

Workmen's Compensation Law nullified by the United States Supreme Court in a decision based on that elusive term, a "marine contract," which Hughes in his standard work on admiralty states has never been intelligently defined and concerning which U. S. Justice Holmes says "the precise scope of admiralty jurisdiction is not a matter of obvious principle or very accurate history."

It is gratifying to note that the recent trend of the New York courts is towards declaring that longshore work and repair work alone done on land is not of a maritime nature and that consequently injuries sustained in such work come under the Workmen's Compensation Law. (See among others the decision of the Appellate Division, January 17, 1922, in the case of *Larsen* v. *Newburgh Shipyards,* in which the courts says "In determining whether or not a contract is maritime in its nature the true test is the subject matter of the contract — the nature and character of the work to be done;" also the decision of Justice Wasservogel, December 9, 1921, dismissing complaint brought under common law in the case of *Esselborne* v. *United Marine Contracting Corporation,* on the ground that the work on a pier of supplying compressed air to a boat is not of a maritime nature.)

Furthermore the Department of Labor has not acceded to the view that injuries occurring on land come within admiralty jurisdiction and has, through the Attorney General, appealed the case of *Insana* v. *Nordenholt Corporation,* 232 N. Y. Rep. 507, which held that a longshoreman working on a dock was employed under maritime contract and not entitled to compensation, to the United States Supreme Court.

In the recent case of *Western Fuel Co.* v. *Garcia* the United States Supreme Court pointed out that, as to certain local matters regulation of which would work no material prejudice to the general maritime law, the rules of the latter might be modified or supplemented by state statutes. *The Grant Smith Porter Ship Co.* v. *Rhode*, handed down by the United States Supreme Court, January 3, 1922, recognizes the jurisdiction of state workmen's compensation laws under certain conditions and the Johnson-Mills bill, passed by the United States Senate, June 10, 1921, and recently favorably reported by the House judiciary committee, is an attempt to give to a substantial class of our citizens the benefit of workmen's compensation.

The full power of the Department of Labor and the State of New York should be exerted to bring within the scope of the workmen's compensation law the many thousands of longshoremen and men working on docks in our State.

Amendments

Suggested amendments to the Workmen's Compensation Law which would clarify the meaning or language of some sections, increase certain benefits, give unlimited medical service and provide a more severe penalty for failure to secure compensation, have previously been submitted to you and will not be repeated here.

Growth of Workmen's Compensation

The purpose of the Workmen's Compensation Law is to grant relief to injured workmen and their dependents. Such laws recognize that industrial accidents are part of the hazard of modern industry and that the financial burden should not fall wholly upon the injured employees but in large part on the employer and be by him distributed as part of the cost of production to the general public.

During the seven year period that the Workmen's Compensation Law has been in force in this State the number of accidents per year has increased from 225,391 to 294,469; the disability claims from 41,665 to 56,118 and the death claims from 812 to 1,177. The workmen's compensation premiums paid to companies have increased from $13,004,033.28 in 1915 to $43,244,867.00 in 1920.

Under the New York Workmen's Compensation Law only a small percentage of financial loss accrues to the injured employee although most unfortunately the pain and suffering that go with industrial accidents are ever present. The compensation is based on the weekly wages lost by the claimant, not on the pain and suffering. As stated above, employers in New York State paid out for workmen's compensation in the form of premiums to insurance companies in the year 1920 $43,244,867.00. To this sum should be added the amount paid out by the self-insurers for claims for compensation, medical benefits and the expense necessary to handle same, estimated at $3,092,728.14 making a total of $46,237,595.14.

Workmen's compensation laws have been of incalculable benefit to society and there is no one today who would return to the old employers' liability system. All recognize the beneficent and humanitarian purposes sought by the enactment of workmen's compensation laws. Their development is steadfastly along the lines of wider coverage and increased benefits.

Conclusion

May I express my sincere appreciation of your sympathetic attitude toward bureau problems brought to your attention. Your encouragement and sound counsel have been most helpful in solving difficulties which have at times presented themselves.

I wish also to record my appreciation of the loyal and intelligent co-operation which I have received from the referees, chiefs of divisions, office managers, heads of groups and all employees connected with the bureau. Their desire and willingness to co-operate have made possible a greater degree of efficiency with a less number of employees.

It is the purpose to increase the effectiveness of the bureau and to render an even greater degree of service to all those with whom it is brought in contract to the end that fairness and justice shall always prevail in the administration of the Workmen's Compensation Law in this State.

STANLEY L. OTIS,
Director, Bureau of Workmen's Compensation.

PART IV

REPORT OF STATE INSURANCE FUND

REPORT OF MANAGER

IN CHARGE OF STATE INSURANCE FUND

To the Industrial Commissioner:

In accordance with previous practice and because it is customary with compensation insurance carriers, this report for 1921 is for the calendar year.

NUMBER OF POLICY HOLDERS AND PREMIUMS IN FORCE

The number of policy holders in the Fund on December 31, 1920, was 9,305. During the year 1921 a total of 2,691 policies were issued while 1,240 were cancelled, making a net gain for the year of 1,451 policies, and resulting in a total of 10,756 policies in force at the close of the year.

Premiums in force at the end of 1920 amounted to $1,023,927. During 1921 the amount of premiums written or renewed was $3,100,115, the amount of expirations and cancellations was $2,951,861, making a net increase in premiums in force of $148,254 to a total of $1,172,181.

The following is a comparison with former years for policies and premiums in force:

	In Force on December 31	
Year	Policies	Premiums
1914	7,125	$689,765
1915	8,507	674,974
1916	9,966	797,743
1917	9,984	810,577
1918	8,782	940,903
1919	8,402	891,476
1920	9,305	1,023,927
1921	10,756	1,172,181

It will be seen that the number of policies in force at the end of 1921 was the largest in the history of the Fund. With respect to premiums in force it should be noted that the 1921 (and 1920) figures are not comparable with those of previous years owing to a considerable proportion of policies having been changed to an annual basis in the last two years as a result of the policy inaugurated in 1920 of changing from a six months to an annual policy period in the Fund.

The extent to which the change to an annual basis has been carried out is shown by the following comparison of premiums in force on an annual and semi-annual basis at the end of the year:

Year	PREMIUMS IN FORCE Annual	 Semi-Annual	 Total
1919	....	891,476	891,476
1920	433,209	589,718	1,023,927
1921	672,391	499,790	1,172,181

If, for comparative purposes, the figures for the last two years on an annual basis be taken at one-half as the equivalent semi-annual basis (which probably, however, understates the case on a semi-annual basis), the result would still show a substantial increase of premiums in force in 1921, the figures being, on such a semi-annual basis, $806,323 for the end of 1920 and $835,986 for 1921.

PREMIUMS WRITTEN

Total premiums written in 1921 amounted to $3,100,115 as compared with $3,798,305 for 1920. This decrease reflects the decrease in payrolls owing to the industrial depression which set in late in 1920 which affected the volume of premiums of all carriers. The Labor Market Bulletin published by the Department gives striking evidence of the shrinkage in payrolls in its figures for total wages paid in factories in the State. The monthly index of such wages for 1920 fluctuated between 277 and 226 with an average of 263, while in 1921 the fluctuation was between 204 and 177 with an average of 188.

The following table gives a comparison of written premiums in the Fund since its establishment:

Year	Total	Year	Total
1914	$689,765	1918	$3,332,842
1915	1,293,613	1919	3,409,962
1916	1,892,561	1920	3,798,305
1917	2,694,851	1921	3,100,115

FINANCIAL CONDITION AT CLOSE OF YEAR

Following is the balance sheet of the Fund as of December 31, 1921:

Assets:	
Bonds at market value	$6,538,466
Cash	469,658
Due from policyholders	860,202
Accrued interest	67,182
Miscellaneous	1,000
	$7,936,508
Liabilities:	
Reserve for unpaid losses (compensation and medical)	$5,058,795
Reserve for investigation and settlement of unpaid claims	374,952

Reserve for unearned premium	365,308
Reserve for administrative expenses incurred	554,980
	$6,354,035
Surplus	$1,582,473
Set aside for catastrophe	$856,587
Set aside for dividends for last half of 1921	350,000
Unassigned	375,886

As pointed out in last year's report the above understates assets in that premiums earned within the year but not disclosed by audits until after December 31 are not included. However, without such potential assets, the statement reveals a strong financial condition at the close of the year. Surplus for catastrophe, for which contributions from policy holders have not been required since June 30, 1920, increased during the year by addition of its interest earnings from $802,424 to $856,587. After setting aside ample funds for payment of dividends on the business of the last half of the year, such dividends not being determinable until some time after the close of the year, there was still unassigned surplus of $375,886. Total surplus at the close of the year after setting aside reserves for all possible contingencies was the largest in the history of the Fund being $1,582,473 as compared with $1,422,186 at the close of 1920 which was the next largest surplus at the close of any year. Comparison with former years is as follows:

Year	Surplus at close	Year	Surplus at close
1914	$250,162	1918	817,210
1915	377,399	1919	848,215
1916	253,179	1920	1,422,186
1917	398,682	1921	1,582,473

RATES AND DIVIDENDS

Premium rates in 1921 were continued as in the preceding year at 15 per cent less than the rates of other carriers.

The amount of dividends declared in 1921 was the largest in the Fund's entire history, no less than $656,373 being so distributed to policy holders. The following table shows the amount of dividends credited in each year:

Year	Amount	Year	Amount
1915	$347,541	1919	$611,233
1916	240,085	1920	347,279
1917	150,421	1921	656,373
1918	229,956		
			$2,582,888

Earned premiums in the State Fund to the close of 1921 amounted to $20,025,881, so that dividends credited have amounted to 13 per cent of premiums. The dividends thus returned represent a reduction of cost to policy holders in the Fund in addition to lower premium rates than those charged by private carriers. The Fund's rates have been below those of other carriers by the following differentials:

Period	Per cent reduction
July 1, 1914 to December 31, 1914	8⅓
January 1, 1915 to June 30, 1917	20
July 1, 1917 to June 30, 1920	14½
Since June 30, 1920	15

CONSOLIDATION OF "GENERAL" GROUPS

An important change in the plan of groups for accounting and dividend purposes was effected in 1921. Such groups had theretofore comprised two classes, one known as general groups and the other as special groups. The general groups, few in number, represented very broad and general classes of industry such as manufacturing, building, mining and quarrying, etc. The special groups, comprising a larger number, were confined to individual industries or classifications including in some cases a single establishment or firm as a group where such was of a size and character to constitute the only one of its class or kind in the Fund and one sufficiently large to warrant treatment as a separate group. The change made in 1921 was to combine the general groups into one. This consolidation, as explained when it was submitted for and received your approval, was proposed only after due consideration from the point of view of the interests of the Fund as a whole and of the policyholders in those groups. It is believed to be entirely sound and desirable from every point of view, one important advantage of it in the direction of efficiency and economy being considerable simplification of accounting and actuarial work.

The one general group, which was established as of July 1, 1921, comprises about three quarters of the State Fund coverage as measured by premiums, the other one fourth remaining in special or trade groups as before.

NET COST OF INSURANCE IN THE GENERAL GROUP

Dividends credited in the general group were at the rate of 15 per cent in 1921, that being the rate both in the several general groups for the first half of the year and in the one general group for the last half. With premium rates in the Fund at 85 per cent of manual rates, this dividend rate reduced the cost to the employer in the general group of the Fund to the equivalent of 72¼ per cent of manual rates.

REDUCTION IN COST OF COMPENSATION INSURANCE THROUGH THE STATE FUND

All will doubtless agree that one of the fundamental purposes of a State Insurance Fund, particularly a competitive fund, is to act as a regulator of the cost of compensation insurance in the direction of keeping such cost down. Naturally the chief test of how far it is fulfilling this function is to be found in a comparison of cost to the employer insured in the Fund as compared with cost to the employer insured with a private carrier. The following comparison for 1921, therefore, is highly significant.

As above indicated, about three quarters of the insurance in the State Fund, measured by premiums, is in the general group. Of the compensation insurance of private carriers in this State, three fourths is in the so-called nonparticipating stock companies. In these companies premiums are charged at full manual rates and no dividends are paid to policyholders and the cost to the employer is, therefore, 100 per cent of manual rates.* This is to be compared with the cost of 72¼ per cent of manual rates * in the general group of the Fund.

This is believed to be the most significant comparison that can be made between State Fund and private insurance results in 1921. In some of the special groups in the Fund the net cost was considerably less than in the general group but these are confined to a comparatively few industries and so would not afford so good a comparison for compensation insurance in general. There is a similar element which would have to be taken account of in comparison with private mutual company insurance in that to a considerable extent the latter is likely to represent selected risks.†

On the other hand the general group in the Fund and stock insurance taken generally, by reason of more general representation of all classes of risks, are both more comparable and more representative of compensation insurance in general.

This, then, is how the comparison stands. The cost to employers in the Fund as compared with cost to employers insured with non-participating private companies was as 72¼ to 100 in terms of percentage of manual rates. In other words, the State Fund reduced the cost to its insured employers 27¾ per cent below the cost to employers of three-quarters of the private company insurance in the State.

LEGISLATIVE RECOMMENDATIONS

Needed Amendments of Administrative Law. The re-codification of the Compensation Law which at the close of the year was being undertaken by a special committee of the Legislature, affords an important opportunity for revision of Article 5 of that law, which governs the administration of the State Insurance Fund. In accordance with the request of that committee and your instructions, a revision of that article was prepared for recommendation to the committee. It is highly encouraging that this proposed revision as finally approved and recommended by you has been incorporated in the bill which has been reported to the Legislature by the committee and that the latter in its report just published urges the enactment of the proposed changes concerning the State Fund. As the committee's report sets forth the reasons for the proposed changes it is not necessary to review them here. It is very much to be hoped and urged that the proposed revision shall be enacted. While not undertaking changes in present principles or policy with regard to the Fund, the proposed changes would realize important improvements, long recognized as needed, in administrative conditions under the present general State Fund policy.

---

* By manual rates is meant such rates whether affected by schedule or experience rating or not. Any modifications of manual rates to individual employers by schedule or experience rating are the same for all carriers including the Fund and hence are immaterial in this comparison.

† To the best of the writer's knowledge the net cost in 1921 in no mutual company was as low as in the general group of the State Fund, and as indicated above some of the special groups in the Fund were much below the general group in net cost.

Legislation Concerning Maritime Employment. Attention was called in the annual report for 1920 to the situation with regard to maritime employments. It is noted here again both because of the general compensation problem which it presents for which whatever solution or alleviation by state legislation may be possible should by all means be urged in the interests of the great numbers of wage earners in this state who have most unfortunately been deprived of compensation in connection with it, and because of the special interest which attaches to it and to any remedy, from the point of view of the State Fund which is especially affected by it.

There are, fortunately, two measures of legislative relief which have now been proposed. One is the Johnson-Mills bill in Congress to restore longshoremen and vessel repairmen to compensation rights under state laws. This bill has already passed the Senate and has been favorably reported out of committee in the House. This measure would afford the fullest remedy of existing difficulties. The other measure is recommended by the special legislative committee (known as the Knight Committee) which is revising the Compensation Law and would permit the parties in interest to elect to pay and accept compensation in lieu of rights under admiralty law. Some such provision seems to be as far as state legislation can go in view of the constitutional question involved.

From the point of view of the State Fund both measures are urged for passage. The proposed state legislation would seem to offer certain relief for one particular class of employees whose situation is at present peculiarly unjust. These are employees of the state engaged in the operation of the barge canal. Their occupation is maritime in character under the decision of the U. S. Supreme Court that the barge canal is subject to admiralty jurisdiction. Consequently the State Fund, which provides compensation insurance for state employees, cannot legally pay it to barge canal employees because it has been held that the Fund can legally pay compensation only as provided by the Compensation Law. This leaves the barge canal employees, whose employment is maritime, with no remedy whatever when injured, because the state, which is their employer, cannot be sued and hence they cannot recover damages under admiralty law. By enabling the State Fund to pay compensation in such cases, which the proposed amendment will do, they can be taken care of without difficulty, because no question of the willingness of the employee to waive admiralty rights can arise in these cases.

Compensation Insurance for State Employees. A situation has developed, with reference to the State's compensation insurance in the Fund for the benefit of State employees which requires legislative attention.

The Legislature annually includes in the general appropriation act an item for " State compensation insurance." Round amounts for this item of $100,000 for several years prior to the fiscal year 1920–21, and of $125,000 for the last two years, were appropriated. Originally, it appears that the amount was fixed as representing approximately the proper insurance premium at the regular rates for the State employees covered by the Compensation Law. But as the result of amendments or court decisions enlarging the jurisdiction of that law as respects occupations of State employees, especially in more recent years, the amount so appropriated has ceased to even approximate proper premiums on the insurance basis, that is, sufficient to pay all compensation on all compensable accidents occurring during the year. A recent examination of this matter has disclosed the fact that on June 30, 1921, if the premium due be reckoned as equal only to losses incurred plus catastrophe charge and administrative expense charge, the State was in arrears for premiums by over $100,000.* No one doubts, of course, the State's ability and intention to supply ultimately the full amount necessary to pay all losses to maturity. But it is hardly sound business method nor just to claimants or the taxpayers to leave the matter in the indefinite status where it now is, not to mention a certain incongruity in the State's practically failing (even though it be, as it is, only a matter of inadvertence) to conform to the requirements as to insurance which it has set up for private employers.

Attention should be called to an alternative course to the State's providing compensation for State employees by full insurance premium payment annually. This would be for the State to virtually make itself a self-insurer with the handling of claims done by the State Insurance Fund. The latter would be obviously the logical and most economical agency for such a procedure. Under this plan it would be necessary for the State to appropriate each year only sufficient funds to cover compensation and medical payments plus administrative expenses for the year. Were the appropriations made for the period up to June 30, 1921, to be considered as having been on this basis,* the total would show a surplus above total payments and administrative expenses to that date of over $200,000. Under such a plan this surplus would make it possible to omit any appropriation for one year.

---

* Incidentally it may be noted, that this constitutes a very substantial item of uncollected premium which must be so carried in the Fund's financial statement.

In weighing this plan consideration would have to be given to a question of justice as between taxpayers in different years. Theoretically, it would be more equitable to charge upon the taxpayers of each year the total cost of the accidents to State employees occurring in that year. However, it is hardly necessary to go into the merits of the two alternatives at this time. The point it is desired to emphasize now is that at present there is no defined policy on the subject. Certainly as a matter of justice to its employees and consistency in view of its requirements of private employers, the Legislature should clearly define the State's intention in the matter and make its appropriations accordingly.

L. W. HATCH,
Manager.

---

* Which as a matter of fact was not done as indicated by the wording of the item in the appropriation acts which is for "State compensation insurance."

PART V

REPORT OF BUREAU OF INDUSTRIAL RELATIONS

REPORT OF DIRECTOR

IN CHARGE OF THE BUREAU OF INDUSTRIAL RELATIONS

To the Industrial Commissioner:

While the writer is hereby transmitting an annual report from July 1, 1920, to June 30, 1921, of the work accomplished by the various divisions making up the Bureau of Industrial Relations, as now constituted by General Order No. 21, however, as I have not had the benefit of personal knowledge of this work, not then being connected with the Department of Labor, the report is confined to the statistical information for the year, and the reports of the chiefs of the divisions who were at the head of the work during the period reported, together with some suggestions for the further proper development and progress of the work covered by the bureau. You have already received the reports of the Division of Mediation and Arbitration, of the Division of Employment, and of the Division of Aliens. Relative to the work of enforcement of the eight hour and prevailing rate of wages laws there is herewith transmitted for the first time a statistical tabulation showing the work accomplished during the year.

DIVISION OF MEDIATION AND ARBITRATION

All building trades generally throughout the State went out on strike about April 1, 1921, against any reduction in wages and in some cases asking for increased wages, which was really caused by the fact that for at least twenty-five years any change in wages within the State of New York in these trades meant an increase in wages and better working conditions; therefore, a general decrease in wages from the abnormal prices paid during the war, was a new condition to the workers, especially the younger class of workers who did not remember days prior to 1896 and against this situation there was a ready protest which was somewhat augmented by advices not to accept lower wages, by prominent men in trade unions generally. As shown by the attached schedules, the building strikes generally speaking are now settled at a wage decrease of from ten to fifteen per cent, after from three to four months' continuance of strike, which doubtless was extended somewhat on account of building industries being slack and a hesitancy in undertaking large enterprises on account of the high cost of materials as well as labor. Contractors not having many jobs ahead were not particularly anxious about adjusting strikes and so having their men upon their hands without work at which to place them continuously and a general feeling existed that they could keep the personnel of their employees intact better by a continuance of the strike than by a settlement and no work.

Commencing with April 15, 1921, at Binghamton and then generally on May 2, 1921, throughout the State, the printers struck for a forty-four-hour week and in some cases wages were involved, but generally speaking the reduction of hours to forty-four working hours per week was the question involved and it was a strike of job printers although affecting newspaper plants where both job printing and newspaper work were carried on.

This strike was not alone a New York State situation; it was an international strike for the forty-four-hour week agreed to about two years before it was put in effect and was actually a hang-over that had been delayed by war and war conditions and while many of the strikers, as will be seen by perusal of attached schedules, are still out, separate settlements have been made in many cases within the State and a careful analysis of the whole international strike exhibits the fact that settlements of the international printers' strike within, are more general than without, the State of New York.

The Division of Mediation and Arbitration has used every means within its power to bring about settlement of these cases and efforts have sometimes met with success, in some instances instilling more friendly relations.

On May 2, 1921, the papermakers of the International Paper Company went out on strike. At the same time all of the papermakers connected with the international union of papermakers passed resolutions to go out on strike in all papermaking plants, aside from the International Paper Company, which said plants are known as the Carlisle group, unless adjustment of wages by an increase of about ten per cent should be made on or before May 12, 1921, when said strike was to be made effective.

The International Paper Company refused any increase in wages and refused to arbitrate the question and still refused and countered with a printed proposal dated May 24, 1921, proposing a scale of wages which was figured upon a reduction of about thirty per cent which was shortly thereafter changed to a proposal of about twenty per cent reduction for unskilled labor and ten per cent reduction for skilled papermakers.

The Carlisle group of paper manufacturers entered into an agreement of arbitration with their men after the men had been out on strike for some time. This agreement of arbitration among other things provided that the men should return to work pending the arbitration, at the old scale of wages, and thereafter the arbitrators agreed and submitted a report reducing the wages of the men from ten to twenty per cent with an average throughout of about fifteen per cent. At all times since, the men in this group of plants have been working.

The International Paper Company strike is still on in all of its plants within and without the State, which include other plants in the United States as well as in Canada, with no present outlook for settlement. The Division of Mediation and Arbitration of the State of New York has intervened, as have also the Federal Mediators.

While there are other strikes involving many men within the State, they are among the class of cases which may be best illustrated by mentioning the United Traction Company strike at Albany and vicinity where the employees are not willing to accept the reduction in pay and the employers are not willing to continue the high wages. In this and many other respects many of the strikes listed in the period covered by this report resemble lockouts as much as strikes and while they were brought about by the calling out of the men instead of either discharge of the men by the employer or a cessation of the work, yet the men were called out over threatened reduction many times even though they asked for increases and while the report follows the system heretofore in vogue of reporting out all men who went out, many months before, yet it is within our knowledge that many of the men of the Albany street car strike and other strikes have taken up other occupations and are not really out of work.

While the director of the bureau believes that everything is being done that can be done by the mediators of the State along the line of arbitration and also believes that there is a purpose to do everything that can be done along the line of mediation, however, as heretofore expressed to you personally as well as in writing, I believe that some arrangement should be made allowing us to get information of resolutions and orders whether by the employee or employer, which affect the vital working conditions, hours of labor, wages paid, in time so that a better opportunity to mediate is given the Division of Mediation and Arbitration, if such legislation can be procured that will be both practical and enforceable.

The Division of Mediation and Arbitration, as it has been developing since its formation in the year 1886, shows very important work having been accomplished. However, industrial disputes have increased faster than the State has been willing to advance the work to curb, restrain and control such disputes and the well known and trite method of adjusting industrial controversies by each side choosing a favorite representative and the two choosing a third person, is entirely inadequate under present conditions. While the reports of the work done since 1886 show promising progress, especially in recent years and during the last eight years which show an average of over fifty per cent successful interventions while in the early years of this work it was at times less than one per cent, nevertheless, with sufficiently broad powers and a real opportunity to intervene at an early stage of the controversy, very much more satisfactory work, exceedingly valuable to the State, could be accomplished.

Regardless of who may win a strike ultimately, the public must pay the costs and it is extremely important that the public see to it that an adequate and practical provision be made to limit by laws such costs. Under Section 21, Subdivision 5 of the present law, broad powers of inquiry are given which are now being exercised. However, such power is somewhat indefinite and is not sufficiently specific to forbid able counsel to raise questions as to its scope and authority and in this connection, we wish to ask that Subdivision 5 of Section 21 be amplified in such manner as to put the powers and scope of inquiry so granted by the Legislature to the Industrial Commissioner, beyond question.

That provision be made that both parties to the industrial controversy be required to notify the Industrial Commissioner of any act, resolution, decision, vote or changed conditions of employment, which might lead to strike, lockout or other industrial controversy, at least ten days before the taking effect of such action, decision or resolution, so that mediation may have opportunity to be tried before the parties have passed into the stage of idleness and hostility.

Illustration of the necessity of this provision has recently been given in the milk strike, New York City, in which a vote to strike was held only a few hours before the men were out and also in the now pending ladies' garment workers' strike in New York City, where the strike vote was taken only shortly before leaving work. In this connection I wish to quote from unquestioned authority, showing that this suggestion is neither new nor ill-considered. See Volume X, Messages from the Governors, where Theodore Roosevelt, then Governor said:

> *The work of mediation* — that is, of settling the dispute before it has reached an acute stage — is even more important and successful *than that of arbitration proper*, after the strike is once on. ***This being so, it would be well to enact legislation which would compel parties to labor disputes to notify the Board of impending trouble***, or of strikes and lockouts.

DIVISION OF EMPLOYMENT

Relative to report of Division of Employment, your attention is again called to the report of David S. Flynn, Director of the Bureau of Employment during the period covered by this report.

DIVISION OF ALIENS

In the Division of Aliens, the report is made by Marian K. Clark, now Chief of the Division; however, as the Chief of the

Division is very much impressed with the necessity for the re-enactment of Sections 151, 152, 153, 154, 155 of the Labor Law as they existed prior to Chapter 50 of the Laws of 1921, the advisability of advocating such re-enactment is hereby submitted for your consideration.

ENFORCEMENT OF SECTION 220 OF THE LABOR LAW

The report of the work done under this section is attached hereto as the work of Henry B. Whitney and the writer wishes to suggest as has been already done under date of September 26, 1921, that Section 56, Subdivision 35, of the Code of Criminal Procedure of the State of New York be amended by adding the words: " and labor laws," the reason for which has heretofore been explained and a perusal of such section will show the effect of so doing.

Your attention is also again called to the advisability of either re-enacting so much of old Section 3 of the Labor Law relating to withholding money from contractors who did not comply with the prevailing rate of wages or striking from Section 220 the words " on which the contractor has been convicted of a second offense in violation of the provision of this section."

The reasons for some of the suggestions herein contained are not given in full, hoping thereby to avoid repetition and conserve the time required for perusal, yet assuring you that the writer will gladly amplify such suggestion at any time that you believe it advisable and beneficial to the bureau and department.

SEAMAN F. NORTHRUP,
Director, Bureau of Industrial Relations.

TRADES AFFECTED

	Number of Disputes		Number of Working Days Lost	
	1920	1921	1920	1921
1. Stone, clay, glass products	8	6	18,834	78,732
2. Metals, machines, conveyances	60	27	1,430,267	325,174
3. Wood manufactures	8	5	738,938	4,728
4. Leather and rubber goods	14	8	445,668	317,298
5. Chemicals, oils, paints, etc	4	9	5,982	23,396
6. Paper and pulp	8	3	57,602	475,122
7. Printing and paper goods	5	21	862,135	190,504
8. Textiles	22	7	305,074	246,469
9. Clothing, millinery, etc	16	20	1,436,235	1,819,951
10. Food, liquors, tobacco	23	9	2,663,510	6,959
11. Water, light, power	7	1	6,680	60
12. Building industry	24	41	288,433	886,288
13. Transportation	26	27	1,828,453	1,381,008
14. Trade	8	5	204,754	74,709
15. Hotels, restaurants, etc	3	3	43,180	8,408
16. Professions	2	2	268,000	306

PRINCIPAL CAUSE OR OBJECT OF DISPUTES

	Number of Disputes		Number of Working Days Lost	
	1920	1921	1920	1921
Increase in wages	139	53	3,803,755	756,945
Reduction in wages	5	63	55,340	2,383,761
Shorter hours	21	19	1,877,851	193,163
Longer hours	2	1	337,540	2,256
Trade unionism	37	21	4,010,988	2,055,947
Particular person	16	12	132,913	59,604
Working arrangements	14	18	370,618	340,014
Payment of wages	4	5	6,780	17,244
Sympathetic	2	2	12,698	30,15[illegible]

RESULTS OF DISPUTES

	Number of Disputes	
	1920	1921
Strikes successful	74	41
Strikes partly successful	73	49
Strikes lost	93	99

NOTE: Strikes pending on July 1, 1920, 7. Strikes pending on July 1, 1921. 14.

METHOD OF SETTLEMENT OF STRIKES WON OR COMPROMISED

Direct negotiations between parties	83	41
Mediation by State Bureau	49	31
Mediation by other agencies	10	[illegible]
Arbitration	5	6

COMPARISON OF INTERVENTIONS, 1920–1921

	1920	1921
Number of disputes in which intervention occurred	106	90
Number of requests received for intervention	47	39
Number of disputes in which intervention was successful	65	38
Number of disputes in which intervention was unsuccessful	41	54
Number of interventions before strikes	8	[illegible]
Number of disputes in which conferences were arranged	55	45
Number of disputes settled by mediation with parties separately	1	3
Number of disputes settled by arbitration	5	[illegible]
Number of public investigations conducted	1	......

COMPARISON OF DISPUTES, 1918–1921

	1918	1919	1920	1921
Number of strikes and lockouts	265	168	240	194
Employees involved directly	83,650	208,952	334,188	218,858
Employees involved indirectly	6,355	2,006	16,403	2,107
Aggregate days of working time lost	1,519,884	11,346,653	10,608,483	5,839,112

---

* Particulars of interventions in 1921 are given in the table which is appended to this report.

TABULAR SUMMARY OF INVESTIGATIONS MADE BY HENRY B. WHITNEY FROM JULY 1, 1920, TO JUNE 30, 1921

LOCALITY	Contractor	Job	Date of investigation	Result of investigation
		EIGHT HOUR LAW (PUBLIC WORK COMPLAINTS)		
Tupper Lake	Joseph Potvin, Superintendent	Village Road Work	Sept. 28 and 29, 1920	Report submitted
Marcy	Scott Brothers	Utica State Hospital	Oct. 13, 1920	Report submitted
Tonawanda	Lupfer & Rennick	Purification Plant	Nov. 22 to 24, 1920	Report submitted
Corning	Bush, Roberts & Schaeffer Co.	Pine Street Bridge	Feb. 2, 1921	Report submitted
Rochester	Walsh Construction Co.	Brown St. Grade Crossing	Mar. 21, 1921	Report submitted
Tupper Lake	James McGroty	Union Free School No. 1, Village of Faust	May 12 and 13, 1921	Immediate compliance and report submitted
Binghamton	H. W. Fitzgerald	River Crossing No. 2, part of main intercepting sewer	May 26, 1921	Immediate compliance and report submitted
		PREVAILING RATE OF WAGES (PUBLIC WORK COMPLAINTS)		
Schenectady	DuBois, Bennett & Son	Schenectady-Scotia Bridge	Aug. 3 and 4, 1920	Report submitted
Elmira	T. L. Eyre	Main Street Bridge (common labor)	Aug. 16 and 17, 1920	Report submitted
Rochester	Brown & Lowe Co.	Barge Canal	Oct. 6, 1920	Report submitted
Rochester	Empire Engineering Co.	Barge Canal	Oct. 6, 1920	Report submitted
Rochester	I. M. Ludington & Sons, Inc.	Barge Canal	Oct. 7 and 8, 1920	Report submitted
Schenectady	American Pipe & Construction Co.	Schenectady-Scotia Bridge	Nov. 6, 1920	Report submitted
Utica	Board of Education	Public School	Nov. 19 and 20, 1920	Report submitted
Tonawanda	Lupfer & Rennick	Purification Plant	Nov. 22 to 24, 1920	Report submitted
Elmira	T. L. Eyre	Main Street Bridge	Feb. 1, 1921	Report submitted
Corning	Bush, Roberts & Schaeffer Co.	Pine Street Bridge	Feb. 2, 1921	Report submitted
Binghamton	Manager, Binghamton State Hospital	Binghamton State Hospital	Feb. 7, 1921	Report submitted
Elmira	T. L. Eyre	Main Street Bridge	Mar. 4, 1921	Report submitted
New York City	New York City Fire Department	Telephone and Telegraph Operators	Mar. 11 to 14, 1921	Report submitted
Buffalo	Eastern Concrete Steel Co.	Buffalo City Hospital	Mar. 17 to 19, 1921	Report submitted
Rochester	Walsh Construction Co.	Brown Street Grade Crossing	Mar. 21 to 26, 1921	Report submitted
Rochester	I. M. Ludington Co.	Barge Canal	Mar. 21 to 26, 1921	Report submitted
Rochester	New England Foundation Co.	Barge Canal	Mar. 21 to 26, 1921	Report submitted
Rochester	Lackawanna Bridge Co.	Barge Canal	Mar. 21 to 26, 1921	Report submitted
Glens Falls	I. M. Ludington Sons	Barge Canal Feeder	April 2, 1921	Report submitted
Olean	Farness & Fote Construction Co.	Paving on Fourth Avenue	May 3 and 4, 1921	Immediate compliance and report submitted
Binghamton	H. W. Fitzgerald	River Crossing, No. 2, part of main intercepting sewer	May 26, 1921	Immediate compliance and report submitted

Elmira	T. L. Eyre	Main Street Bridge	May 27, 1921	Attendance at Recorder's Court
Elmira	T. L. Eyre	Main Street Bridge	June 6, 1921	Attendance at Recorder's Court
Hornell	Edward H. Coogan	Painting all city bridges	June 6 and 7, 1921	Complaint withdrawn
Hornell	Lee Dennison	Paving work for the Department of PublicWorks, cost plus basis	June 7, 1921	Complaint withdrawn

OTHER INVESTIGATIONS

Tupper Lake	In re compensation		July 23 and 24, 1920	Reported to Commissioner Lynch
Athens	Composite Metal Lath Company	In re Section 11	Oct. 20, 1920	Report submitted
Watertown	Peckham Construction Co.	In re Court St. Grade Crossing Elimination	Jan. 5 to 7, 1921	Attendance at court
Elmira	T. L. Eyre	In re Section 11 — Main Street Bridge	Jan. 11, 1921	Report submitted
Corning	Bush, Roberts & Schaeffer Co.	Investigation as to compliance	March 5, 1921	Report submitted
Tonawanda	Lupfer & Rennick	Filtration Plant	March 8, 1921	Verbal report — complaint withdrawn
Buffalo	Eastern Concrete Steel Co.	Buffalo City Hospital (Section 14)	Mar. 17 to 19, 1921	Report submitted
Buffalo	In re wages of bricklayers, as per Commissioner Sayer's request		May 5, 1921	Reported verbally to Commissioner Sayer
Rochester	In re wages of carpenters, as per Commissioner Sayer's request		May 6, 1921	Reported verbally to Commissioner Sayer

TABULAR SUMMARY OF INTERVENTIONS

LOCALITY	Trade involved	Date of strike (actual or threatened)	Number of employees affected	Date of intervention
Albany	Metal polishers	June 29, 1920	10	July 15, 1920
Albany	Bookbinders	Sept. 1, 1920	252	Sept. 9, 1920
Albany	Tailors	Sept. 1, 1920	60	Sept. 28, 1920
Albany	Chemical workers	Oct. 6, 1920	129	Oct. 8, 1920
Albany	Cap makers	Dec. 17, 1920	18	Dec. 30, 1920
Albany	Motormen and conductors	Jan. 29, 1921	1,200	Jan. 22, 1921
Albany	Stationary engineers and waiters (hotel)	Feb. 14, 1921	16	Mar. 3, 1921
Albany	Printing trades	May 2, 1921	761	May 3 to June 12, 1921
Albany	Building trades	May 2, 1921	1,000	May 2, 1921
Amsterdam	Tapestry workers	Aug. 24, 1920	560	Mar. 30, 1921
Auburn	Motormen and conductors	Aug. 4, 1920	171	Aug. 4, 1920
Auburn	Shoe workers	Aug. 17, 1920	500	Sept. 1, 1920
Auburn	Shoe workers	Dec. 29, 1920	75	Jan. 20, 1921
Binghamton	Printers	Mar. 8, 1921	139	Mar. 17, 1921
Buffalo	Clothing workers	July 1, 1920	930	July 15, 1920
Buffalo	Milk delivery men	July 14, 1920	62	July 17, 1920
Buffalo	Waitresses, etc	Aug. 4, 1920	64	Sept. 15, 1920
Buffalo	Molders and coremakers	Feb. 15, 1921	800	April 12, 1921
Buffalo	Street railway employees	Threatened	3,000	April 21, 1921
Buffalo	Printers	May 2, 1921	426	July 15, 1921
Ellenville	Umbrella handle makers	July 21, 1920	40	Aug. 17, 1920
Ft. Edward, Watertown, Piercefield, Niagara Falls, Glens Falls, Corinth, Cadyville, Morrisonville, Ticonderoga	Papermakers	May 1, 1921	3,242	May, June and July, 1921
Glens Falls	Cement workers	June 26, 1920	136	Nov. 11, 1920
Glens Falls	Printers	May 2, 1921	35	May 5, 1921
Gloversville	Carpenters	Jan. 4, 1921	190	Jan. 24, 1921
Hudson Falls	Lumber workers	May 2, 1921	140	May 8, 1921
Ithaca	Printers	May 1, 1921	25	June 24, 1921
Jamestown	Electricians	June 15, 1920	40	June 25 to Jan. 6, 1921
Jamestown	Bricklayers	May 2, 1921	40	July 15, 1921
Morris Heights	Machinists	June 10, 1920	170	Aug. 5, 1920
Mount Vernon	Raincoat makers	Dec. 18, 1920	40	Jan. 26, 1921
Newburgh	Shipbuilders	Aug. 23, 1920	1,500	Sept. 8, 1920
Newburgh	Bakers	May 1, 1921	24	May 17, 1921
Newburgh	Building trades	May 2, 1921	500	May 17, 1921
New York City	Furriers	May 27, 1920	9,000	May 26 to Dec. 21, 1920
New York City	Laboratory men (Motion picture craftsmen)	June 20, 1920	942	July 22, 1920
New York City	Die cutters	July 1, 1920	65	Aug. 9, 1920
New York City	Cigarmakers	July 15, 1920	22	Nov. 29, 1920
New York City	Cigarmakers	Aug. 7, 1920	125	Nov. 29, 1920
New York and Brooklyn	Motormen and conductors	Aug. 29, 1920	11,000	July 28 to Dec. 2, 1920
New York City	Painters	Sept. 1, 1920	12,000	Oct. 5, 1920
New York City	Van drivers	Sept. 1, 1920	2,000	Sept. 20, 1920
New York City	Garage workers	Sept. 30, 1920	1,800	Oct. 4, 1920
New York, Long Island City	Furniture workers	Oct. 7, 1920	200	Oct. 14, 1920

FROM JULY 1, 1920, TO JUNE 30, 1921

Result of intervention	Result of strike
Conference arranged; partial settlement effected	Compromise.
Mediator interviewed employers and arranged joint conference	Compromise.
Several conferences arranged by mediator and satisfactory settlement effected	Compromise.
Mediator interviewed employees	Strike won.
Mediator's efforts to arrange joint conference unsuccessful	Strike lost.
Several conferences arranged by mediator, but unable to bring about settlement	Strike pending.
Mediator endeavored to arrange conference — conference arranged with proprietor of hotel; he would not deal with former employees	Strike lost.
Several conferences arranged by mediator and settlement effected	Strike won.
Arranged conference with sheet metal workers and settlement effected; arranged conference with carpenters and electricians, but no settlement was brought about; interviewed representative of employers and employees in all other trades but unable to arrange joint conference	Strike lost.
Mediator's efforts to bring about joint conference unsuccessful	Strike lost.
Conference arranged by mediator and matters submitted to arbitration	Strike won.
Mediator interviewed both sides	Factory closed down.
Employers refused to meet strikers	Strike lost.
Employers' representative refused to enter conference with employees	Strike lost.
Mediator endeavored to arrange conference; employers refused to meet with representatives of The Amalgamated	Strike lost.
Mediator had conference with employers and with employees; no settlement effected	Strike lost.
Mediator unable to arrange joint conference; employer would not meet or treat with employees	Strike lost.
Mediator's efforts to bring about joint conference unsuccessful	Strike lost.
Mediator investigated — conference with employer's representative and employees, satisfactory adjustment reached	Strike did not occur.
Mediator intervened — employers refused to meet or treat with strikers	Strike pending.
Joint conference arranged by mediator; no settlement reached	Strike lost.
Interviewed representative of International Paper Company and endeavored to bring about conference; company's officials would not meet or treat with employees	Strike pending.
Mediator's efforts to arrange a conference unsuccessful	Strike lost.
Mediator's efforts to arrange a conference unsuccessful	Strike lost.
Efforts to bring about amicable settlement unsuccessful	Compromise.
Conference arranged by mediator	Compromise.
Mediator intervened; employers refused to meet strikers	Strike lost.
Mediator advised the workers to declare strike off	Strike lost.
Mediator interviewed representative of bricklayers' union; could not bring about joint conference	Strike pending.
Mediator interviewed employer and employee	Compromise.
Mediator's efforts to arrange conference unsuccessful	Strike lost.
Interviewed employers and employees; endeavored to arrange joint conference; employers would not meet representative of unions	Strike lost.
Employers refused to meet or treat with strikers	Strike lost.
Conference arranged by mediator; settlement made subject to a referendum	Compromise.
Mediator interviewed both sides; efforts to bring about joint conference unsuccessful	Strike lost.
Mediator arranged joint conference	Strike won.
Joint conference arranged by mediator and settlement effected	Compromise.
Mediator's efforts to arrange conference unsuccessful	Strike lost.
Mediator's efforts to arrange conference unsuccessful	Strike lost.
Conference with employers and employees before and after strike	Strike lost.
Conference arranged by mediator	Strike partly unsuccessful.
Joint conference arranged and settlement effected by mediator	Compromise.
Mediator's efforts to arrange joint conference unsuccessful	Strike lost.
Mediator's efforts to arrange conference unsuccessful	Strike lost.

TABULAR SUMMARY OF INTERVENTIONS

LOCALITY	Trade involved	Date of strike (actual or threatened)	Number of employees affected	Date of intervention
New York-Brooklyn	Bakers	Oct. 30, 1920	1,500	Oct. 30, 1920
New York City	Pipemakers	Nov. 3, 1920	650	Nov. 9, 1920
New York City	Men's clothing	Dec. 6, 1920	65,000	Dec. 6, '20, to June 29, '21
New York City	Harbor boatmen	Threatened	4,500	Dec. 23 to 31, 1920
New York City	Iron and bronze workers	Jan. 1, 1921	2,050	Jan. 5, 1921
New York-Brooklyn	Auto body makers	Jan. 10, 1921	25	Jan. 7, 1921
New York-Hempstead, Long Island	Motormen and conductors	Threatened	165	Feb. 16, 1921
New York City	Waist and dressmaking	Feb. 9, 1921	30,000	Feb. 9 to 17, 1921
New York City	Feather boa makers	Mar. 8, 1921	1,000	Mar. 10, 1921
New York City	Harbor boatmen	Mar. 10, 1921	300	Mar. 1 to Apr. 4, 1921
New York City	House wreckers	Threatened	1,800	Mar. 14 to May 3, '21
New York City	Furniture drivers	Mar. 23, 1921	189	Apr. 7 to Sept. 30, '21
New York City	Cigarmakers	April 1, 1921	100	Apr. 7 and 8, 1921
New York City	Bookbinders	April 12, 1921	1,650	May 12, 1921
New York City	Mariners, etc	May 1, 1921	18,500	May 2, 1921
New York City	Printers	May 2, 1921	53	Mar. 7 to May 2 '21
New York City	Taxi drivers	May 19, 1921	400	May 17 to May 27, '21
New York City	Teamsters	May 23, 1921	520	May 18 to June 1, '21
New York City	Photo engravers	June 1, 1921	225	June 2, 1921
New York-Brooklyn	Butchers	June 10, 1921	1,240	June 20, 1921
New York City	Glaziers, window and plate glass workers	June 13, 1921	......	June 13, 1921
New York City	House wreckers	June 22, 1921	76	June 22, 1921
Oswego	Machinists	Aug. 20, 1920	120	Oct. 28, 1920
Peekskill	Hatters	May 9, 1921	288	May 10, 1921
Poughkeepsie	Carpenters	Investigation	40	July 8, 1921
Rochester	Silver workers	July 6, 1920	89	Aug. 22, 1920
Rochester	Building trades	April 1 to May 1, '21	2,500	April 19 to July 15, '21
Rochester	Machinists	Feb. 1, 1921	96	Feb. 18, 1921
Rochester	Teamsters and chauffeurs	April 1, 1921	165	April 4, 1921
Rochester	Printing trades	May 2, 1921	375	July 15, 1921
Syracuse	Motormen and conductors	Threatened	40	Mar. 1, 1921
Syracuse	Boilermakers	Jan. 17, 1921	75	Mar. 2, 1921
Syracuse	Printing Trades	May 2, 1921	130	Aug. 9, 1921
Tonawanda	Papermakers	Jan. 24, 1921	300	Feb. 3, 1921
Troy-Cohoes	Building trades	April 15 and May 2, '21	546	April, May and June, '21

FROM JULY 1, 1920, TO JUNE 30, 1921 — *(Continued)*

Result of intervention	Result of strike
Interviewed both sides	Strike won.
Mediator arranged conference	Compromise.
Mediator interviewed both sides and endeavored to arrange joint conference	Compromise
Conference arranged by Mediator	Strike averted.
Efforts to bring about joint conference unsuccessful	Strike lost.
Mediator interviewed employer, endeavored to arrange joint conference; interviewed employees who agreed to accept decrease in wages but no increase in hours; offer not accepted	Strike lost.
Conference arranged by mediator	Compromise.
Conference with employers and employees	Strike lost.
Conference arranged by mediator	Strike won.
Conference arranged by mediator	Strike lost.
Joint conference arranged by bureau's representative	Strike averted.
Endeavored to bring about joint conference of employers and employees, but not successful	Compromise.
Mediator's efforts to bring about amicable settlement unsuccessful	Strike lost.
Mediator endeavored to arrange joint conference; employers refused to meet strikers	Strike lost.
Investigation made by mediator; matter was placed in the hands of the U. S. Shipping Board's federal adjusters	Strike lost.
Mediator intervened before and after strike: employer agreed to demands of employees	Strike won.
Joint conference arranged by mediator	Compromise.
Joint conference arranged by mediator	Strike partly successful.
Mediator interviewed employers and employees; found they were holding conferences	Arbitration.
Mediator's efforts to bring about joint conference unsuccessful	Strike lost.
Arbitration hearing held at mediator's office, New York City, between the glaziers' local union of the Brotherhood of Painters, Decorators and Paper Hangers of America, Inc., and The Window and Plate Glass Dealers' Assoc., Inc., of N. Y.	Decision rendered by mediator.
Matter settled by arbitration on June 22, 1921; decision rendered by mediator	Strike averted.
Conference arranged; settlement resulted	Strike lost.
Mediator intervened; employers refused to meet committee of union men. Employers asked union for open shop conditions	Strike pending.
This was not an actual strike; wage adjustment was pending	No strike.
Mediator interviewed both sides; efforts to arrange joint conference unsuccessful	Strike lost.
Mediator interviewed representative of employees and representative of employers; employees refused to consider any reduction from the present scale; employers insisted on a fifteen per cent reduction. Both parties stated that the holding of a conference would accomplish no results	Strike pending.
Mediator's efforts to arrange amicable settlement unsuccessful	Strike lost.
Conference arranged by mediator	Strike lost.
Mediator endeavored to arrange conference; employers refused to meet strikers	Strike pending.
Mediator investigated and found negotiations were pending whereby strike was averted	Strike averted.
Mediator interviewed both sides; conference had failed	Strike lost.
Mediator's efforts to arrange joint conference unsuccessful. Employers refused to meet or treat with strikers; employees stated that the request for a 44-hour week was an international proposition and not subject to arbitration	Strike pending.
Mediator attempted to arrange conference; company refused to deal with committee as selected by the union	Strike pending.
Conference was arranged with sheet metal workers in Albany, Troy and Schenectady; contractors in other trades would not consider conference until settlement was reached in Albany	Compromise.

TABULAR SUMMARY OF INTERVENTIONS

LOCALITY	Trade involved	Date of strike (actual or threatened)	Number of employees affected	Date of intervention
Troy	Plumbers	April 15, 1921	40	April 15, 1921
Troy	Longshoremen	April 9, 1921 threatened.	40	April 14, 1921
Troy	Machinists	July 3, 1920	175	July 8, 1920
Utica	Electricians	Threatened	......	Dec. 28, 1920
Utica	Gas and electric workers	Oct. 26, 1920	55	Oct. 26, 1920
Utica	Building trades	May 1, 1921	462	June 22, 1921
Utica	Printing trades	April 1, 1921	35	May 22, 1921
White Plains	Plumbers	Jan. 3, 1921	40	Jan. 12 to Feb. 14, '21
Yonkers	Printing trades	May 19, 1921	31	May 21, 1921
Yonkers	Machinists	Aug. 21, 1920	390	Aug. 23, 1920
Yonkers	Building trades	April 1, 1921	12,000	April 6 to May 19, '21

FROM JULY 1, 1920, TO JUNE 30, 1921 — (*Concluded*)

Result of intervention	Result of strike
Mediator endeavored to arrange conference but was unable to arrange it	Strike won.
Mediator investigated conditions and found that there would be no cessation of work	Strike averted.
Mediator's efforts to arrange joint conference unsuccessful	Strike lost.
Mediator arranged conference at which arbitrator was selected	Strike averted.
Mediator arranged joint conferences; settlement resulted	Strike lost.
Mediator endeavored to arrange joint conference; builders declared they were not ready for conference	Strike pending.
Mediator endeavored to arrange conference; employers stated they were not ready for conference	Strike pending.
Mediator endeavored to arrange joint conference; employers refused; arranged conference with employees and settlement effected	Strike lost.
Conference arranged by mediator	Compromise.
Mediator endeavored to arrange joint conference	Strike lost.
Suggestions of mediators to both parties finally accepted	Referred to arbitration.

PART VI

REPORT OF BUREAU OF RESEARCH AND CODES

REPORT OF DEPUTY COMMISSIONER

IN CHARGE OF THE BUREAU OF RESEARCH AND CODES

To the Industrial Commissioner:

In compliance with your general order No. 21, the Bureau of Research and Codes has been organized and comprises the former Bureau of Codes, the Bureau of Women in Industry, the Division of Industrial Hygiene and the Engineering Division, which now form four separate divisions of the new bureau.

Each division has continued its former work and has also taken on certain new activities. The Division of Industrial Hygiene will continue to do routine work for the inspection bureau as required and will gradually take on more investigations and research problems for the benefit of the entire department. This division, during the past year, has been engaged in surveys of various factory conditions to determine to what extent employees were injured due to slipping, falling, failure to obey instructions and the manner of wearing clothing while at work.

Data were prepared relating to removal of waste material from woodworking machines and the most satisfactory manner of eliminating dust circulation. Data have also been collected on devices for sanitary control of other materials disengaged in industrial processes. Studies have been carried on relative to occupational diseases, the dyeing and cleaning industry, and general ventilation, humidity and temperature in certain industries.

The Division of Codes has been engaged in the preparation of a code for mercantile establishments, the revision of Rule 2 relating to structural requirements in existing buildings less than six stories high, rules on work in tunnels in compressed air and on suitable lighting for various classes of work.

The referees in this division, when authorized by the Industrial Board, have held hearings on applications for variations from the code on structural changes in existing buildings and on new construction. They are also active members on several code committees of the American Society of Mechanical Engineers.

The Division of Women in Industry has been engaged in several special investigations and has prepared for publication a bulletin on industrial posture and seating. It has also investigated and analyzed physical working conditions, hours, wages and personnel administration in five and ten cent stores. It has studied work accidents among women, employment of women in newspaper offices and, in an advisory capacity, employment of women in general.

The Engineering Division, with offices at Albany, has been engaged in inspection and approval of plans that have been submitted by architects and owners for alterations and for new factory buildings, in passing on plans for plumbing, for proposed elevator installations and in making elevator tests.

Since its organization the Bureau of Research and Codes has been engaged in preparing data on various subjects for the benefit of the Bureau of Inspection and in approval of special devices. It holds regular meetings to formulate plans for improved and staple safety conditions for workers and for the co-ordination of work in the department. The several divisions are represented at these meetings by their chiefs, Messrs. Cullen, Eipper, Vogt, Picard and Miss Swartz, the Deputy Commissioner being chairman.

Except for the war period, when statistics indicate an increase in industrial accidents due to the employment of many unskilled workers who were unfamiliar with the need for personal care in the operation of machine tools, the accidents to factory workers in the operation of tools has gradually, year by year, become less per thousand so employed, indicating that guarding of dangerous places and equipment and increased watchful care by the inspection bureau and employers has resulted in beneficial effects.

However, many industrial accidents do occur, as shown in the report by the Director of the Bureau of Workmen's Compensation. Past experience proves the need for the preparation of additional rules and codes to cover hazardous conditions and to secure greater co-operation of workers and employers. The department must take on other activities such as safety educational work — training employees to exercise greater care in their own behalf and for their fellow workers.

It is apparent that data of accidents as they occur should be promptly tabulated in order to secure the benefit of experience in providing against recurrence of many accidents where the causes are known; therefore, in addition to the statistics of completed compensatable accident cases, now prepared, most of which cannot be compiled for several years after the accident occurs, there should be prepared from the employers' accident reports, as soon as received, the available data, so that the Bureau of Research and Codes and the Bureau of Inspection may be able to take advantage of early information regarding all accidents on which claims for compensation are made. I am now working with the Chief Statistican in devising means to economically and effectively provide such data.

Your request for rearrangement of the working office space by the removal of unnecessary partitions and for the installation of suitable sanitary fixtures and facilities in the building occupied by the Department in New York City has resulted in the preparation of plans and specifications by the State Architect and contracts for such improvements will be let in time to take advantage of the vacation period for the major portion of the alterations.

M. H. CHRISTOPHERSON,
Deputy Commissioner.

PART VII

OPINIONS OF THE ATTORNEY-GENERAL CONSTRUING PROVISIONS OF LABOR LAW

COMPILED BY THE OFFICE OF THE CHIEF STATISTICIAN

NOTE.— In the following pages are printed the opinions rendered by the Attorney-General in construing labor laws during the year 1921. Similar opinions of earlier years may be found in previous reports of the Department. The opinions are here arranged under general subject headings. Opinions dealing with the Labor Law and the Workmen's Compensation Law are placed first, arranged according to section numbers, followed by opinions referring to other laws.

OPINIONS OF ATTORNEY-GENERAL

LABOR LAW

(a) The Prevailing Rate of Wages Provision Does Not Apply to Employees of Boards of Education Receiving Annual Salaries (§ 220, subd. 3).

INQUIRY

Yearly salaries have been established for carpenters, painters, plumbers and laborers by the board of education of the city of Utica. Will you please inform me if this practice is a violation of section 3 [*] of the Labor Law?

OPINION

It appears from a report made by H. B. Whitney, Confidential Agent of the State Industrial Commission, that prior to January 1, 1921, the board of education of the city of Utica was employing one plumber at $7.09 per day: four carpenters at $5.60 per day; two painters at $7.28 per day and three laborers at $3.50 per day; that such board of education had always paid the prevailing per diem rate of wages to such employees until the past summer when the prevailing rates were twice increased and there were not sufficient funds available to meet the demands.

The report of said confidential agent further shows that on the 29th day of October, 1920, such board of education of the city of Utica met to consider the budget for 1921, and finally adopted a resolution establishing in said budget for 1921 certain positions with certain fixed salaries as follows: plumber and steamfitter at $2,000 per year; four carpenters at $1,700 per year; two painters at $1,650 per year; three laborers at $1,000 per year together with two weeks vacation during the year without loss of pay.

It further appears from the report of said confidential agent that the prevailing rate of wages in the city of Utica at the present time of the employees or mechanics performing the same class of work as those for whom the above mentioned positions were created by the board of education is as follows: plumbers and carpenters, $1.00 per hour; painters, 91 cents per hour; laborers, 65 cents per hour, and it is contended that the salaries for the positions so created, if considered from a per diem basis, would be less than the now prevailing rate of wages for such class of work in the city of Utica.

The question has been raised by the State Industrial Commission as to whether or not the payment of these classes of employees and mechanics under the method adopted by the board of education of the city of Utica is in violation of section 3 of the Labor Law, which is as follows:

---

[*] New § 220, subd. 3, of the Labor Law is derived from old § 3.

> Eight hours shall constitute a legal day's work for all classes of employees in this state except those engaged in farm and domestic service unless otherwise provided by law. This section does not prevent an agreement for over work at an increased compensation except upon work by or for the state or a municipal corporation, or by contractors or subcontractors therewith. Each contract to which the state or a municipal corporation or a commission appointed pursuant to law is a party which may involve the employment of laborers, workmen, or mechanics shall contain a stipulation that no laborer, workman or mechanic in the employ of the contractor, subcontractor or other person doing or contracting to do the whole or a part of the work contemplated by the contract shall be permitted or required to work more than eight hours in any one calendar day except in cases of extraordinary emergency caused by fire, flood or danger to life or property. *The wages to be paid for a legal day's work as hereinbefore defined to all classes of such laborers, workmen or mechanics upon all such public works,* or upon any material to be used upon or in connection therewith shall not be less than the *prevailing rate for a day's work* in the same trade or occupation in the locality within the state where such public work on, about, or in connection with which such labor performed in its final or completed form is to be situated, erected or used.

With respect to the portion of the section above quoted, which relates to the prevailing rate of wages, it applies only to such work for which a contract or agreement is made with the employee on a per diem compensation: that is the compensation for

> a legal day's work * * * shall not be less than the prevailing rate for a day's work.

The courts have held that a man holding yearly employment at a fixed salary or compensation is not within the intent of the prevailing rate of wages provision, because he

> is not brought into competition with workmen seeking daily or weekly employment, so that he is clearly not within the reason or purposes of the law, which in consequence, does not apply. *Bock* v. *City of New York,* 31 *Misc.* 56.

Also, *In re Farrell* v. *Board of Education*, 113 App. Div., 406, Justice Jenks writing the opinion, in construing section 3 of the Labor Law holds that an employee or mechanic working under an annual salary does not come within the provisions of said section, wherein he states:

> But the language of the Labor Law indicates that it refers to those who are paid daily wages for labor upon public work, and that its purpose is to require that such wages shall equal the prevailing rate paid to other laborers, workmen or mechanics, not engaged upon public work.

We also find that it was the intent of the Legislature that said section 3 of the Labor Law should not apply to a person receiving an annual salary or compensation; but only to those paid under the daily wage method, for the reason that this section of the law applies to the state service equally with the city service, and yet the Legislature has for some time past, under the annual appropriation bill, fixed the compensation of hundreds of laborers, workmen and mechanics on an annual salary basis, which in no way corresponds to the prevailing rate of wages in the community in which these men are located and employed.

Therefore, the only question left for me to review is whether or not the board of education of the city of Utica had the statutory authority to employ the persons hereinabove enumerated upon an annual salary basis.

I find that such acts of the board of education of the city of Utica are authorized and validated under section 887 of the Education Law, as amended by chapter 645 of the Laws of 1919, which empowers the board of education in each city

> to fix the salary and annual salary increment of all members of supervising and teaching staffs and of all principals, teachers, supervisors or other *employees*, whose salaries are not fixed by the provisions of this act

It is perfectly apparent that the acts of the board of education of the city of Utica in fixing annual salaries to these positions are valid; that the persons occupying such positions in no way interfere with or compete with other persons in the city of Utica performing similar work under a daily wage; that in addition to their annual salary such persons are permitted a vacation of two weeks with full pay.

From all the reasons, as above set forth, I can reach no other conclusion than to hold that the acts and proceedings of said board of education of the city of Utica, relative to the employment of the persons herein mentioned, are in no respect a violation of section 3 of the Labor Law.

Dated *January* 13, 1921.

CHARLES D. NEWTON,
Attorney-General.

To HON. JAMES M. LYNCH, *Commissioner, State Industrial Commission, Albany, N. Y.*

(b) The Board May Grant Variations from the Prohibition Against Hoisting Material Outside Buildings (§ 241, subd. 6.) *

October 4, 1921.

HON. HENRY D. SAYER, *Industrial Commission, The Capitol, Albany, N. Y.*

DEAR SIR.—Permit me to acknowledge your communication of the 30th ult. requesting me to advise you relative to section 241 of the Labor Law as follows:

(1) Does the substitution of the word "material" in subdivision 6 of section 241 of the recodified Labor Law change the effect of section 20 of the old law, and (2) if so, has the Industrial Board, or in the City of New York the Board of Standards and Appeals, the right to grant a variation from the provisions of such section under the provisions of section 30 of the Labor Law?

Section 20, chapter 36, Laws of 1909, as amended, provided:

> If a building in the course of construction is five stories or more in height no *lumber or timber* needed for such construction shall be hoisted or lifted on the outside of such building.

Subdivision 6, section 241, chapter 50, Laws of 1921, reads:

> 6. If a building in course of construction is five stories or more high *no material* for such construction shall be hoisted or lifted on the outside of such building.

The word "material" is general in its scope, and includes everything that is used in the construction of a building. It may not have been the legislative intent to extend the statute in this respect, but to hold that an amendment including a greater number of objects than was previously specified is limited to the lesser number is to do violence to the plain import of the English language. Certainly there is as much danger occasioned by the hoisting of structural steel outside of a building as would result from the hoisting of lumber or timber. Therefore, the answer to your first inquiry must be in the affirmative.

To strictly observe the provisions of subdivision 6 of section 241 compels the contractor to disregard other provisions of the same section, to wit:

> Subd. 1. If the floors are to be arched between the beams thereof, or if the floors or filling in between the floors are of fireproof material the flooring or filling in shall be completed as the building progresses.
>
> Subd. 2. If the floors are not to be filled in between the beams with brick or other fireproof material the under flooring shall be laid on each story as the building progresses.

---

* L. 1922, ch. 7, has substituted the words, "lumber or timber," for the word, "material," in § 241, subd. 6.

The requirements of these provisions cannot be followed and leave open spaces for hoisting material inside of the building. Numerous changes in plans and structural conditions must be made to permit the hoisting of material from the inside. Dangers are likely to be increased by the necessary manipulations required to hoist the material, transfer it to the outside and place it in position.

It is contended that it is impossible to comply with the terms of the statute in the construction of concrete buildings, and generally, that the added cost of construction makes compliance with the statute prohibitive. Further enumeration of the difficulties attending the enforcement of this law is unnecessary.

In *Lockhart* v. *Hoffman* (197 N. Y. 331), it was held that a provision similar to subdivision 6, formerly a part of section 20 of the Labor Law, by reason of the difficulties and the extraordinary expense attending the alteration and repair of old buildings, did not apply. It would seem from the reasoning of that opinion that if conditions exist in relation to new buildings in the course of construction which make it impossible or impracticable to comply with the provisions of such a statute the courts might likewise hold it inoperative. However, it does not seem necessary to invoke judicial aid in this matter.

The Industrial Board created by section 12 of the Labor Law has been given ample power to adjust the hardships occasioned by this statute.

> § 30. *Variation.* If there shall be practical difficulties or unnecessary hardship in carrying out a provision of this chapter or a rule of the board thereunder affecting the construction or alteration of buildings, exits therefrom, the installation of fixtures and apparatus or the safe-guarding of machinery and prevention of accidents, the board may make a variation from such requirements if the spirit of the provision or rule shall be observed and public safety secured. Any person affected by such provision or rule, or his agent, may petition the board for such variation stating the grounds therefor. The board shall fix a day for a hearing on such petition and give notice thereof to the petitioner. If the board shall permit such variation it shall be in the form of a resolution adopted by at least two votes, and the variation shall apply to all buildings, installations or conditions where the facts are substantially the same as those stated in the petition. The resolution shall describe the conditions under which the variation shall be permitted and shall be published in the bulletin of the department. Where the variation affects premises or conditions in the city of New York it shall also be published in the City Record of New York city. A properly indexed record of all variations shall be kept in the office of the department and open to public inspection.

The plain purpose of the statute was to prevent injuries to passers by and employees engaged in construction work. If the enforcement of the statute results in the increased danger of the employees and others, and makes impractical or prohibitive the construction of new buildings, it is the plain duty of the Industrial Board to adopt resolutions modifying the statute as to such dangers and hindrances.

The answer to your second inquiry is that the Industrial Board has power to grant such variation of the statute as may be consistent with public safety and practical construction.

Very truly yours,

CHARLES D. NEWTON,
Attorney-General.

WORKMEN'S COMPENSATION LAW

(a) State Employees Working upon Canal Boats Are Subject to Admiralty Jurisdiction (§ 2, grs. 8, 10). *

November 29, 1921.

HON. NATHAN L. MILLER, *Governor, Executive Chamber, Albany, N. Y.*

MY DEAR GOVERNOR.— In reference to the two letters submitted by you, one of November 15th from the Superintendent of Public Works and one of October 26th to the Superintendent from Commissioner Sayer, I will say that no doubt the state canals are navigable waterways and are under admiralty jurisdiction as to maritime accidents. It would be doubtful as to whether many of the employees have anything to do with direct navigation of the canals. Only such employees as have to do with the running of canal boats or tugs and the loading or unloading of freight upon the boats would be considered as under maritime employment; and as to such as receive injuries under maritime employment there could be no compensation awarded by the State Industrial Board if the question of admiralty is raised.

It might be possible, perhaps, for the State Industrial Board to decide not to raise the admiralty question in any case involving the state employees on the canal. That would be really a question of policy as if the question is raised there could be no award made in such case which could be sustained by the courts. The State might, however, make an appropriation for the direct insurance of such employees or for the payment of compensation to them, to be determined in the Court of Claims or by the State Industrial Board. Such appropriations, if made, would be in the nature of insurance by the State of its own employees. An effort is being made in Congress to provide by Federal law for maritime workers, both seamen and harbor workers.

I enclose a memorandum in reference to the present state of the law on the subject of admiralty jurisdiction and with reference to the bills which have been introduced in Congress.

Very truly yours,

CHARLES D. NEWTON,
Attorney-General.

Memorandum

In view of the decision of the United States Supreme Court in the case of *Knickerbocker Ice Co.* v. *Stewart*, 253 U. S. 149, the law as to maritime workers is in rather a chaotic condition. That decision which was made by a divided court, five to four, held that in the case of maritime injuries the remedy of the employee was in admiralty and that the Congress of the United States could not delegate to the States the right to provide for a compensation law which would apply to maritime workers.

The Court of Appeals of this State, in the cases of *Anderson* v. *Johnson Lighterage Co.*, 224 N. Y. 539, and *Keator* v. *Rock Plaster Mfg. Co.*, 224 N. Y. 540, has held that even where the injuries are sustained upon a dock, if the employment of the workmen is maritime, they are covered by the Admiralty Law and there is no remedy under the Workmen's Compensation Law.

The Court of Appeals has reiterated this doctrine in two cases lately decided, *Newham* v. *Chile Exploration Co.* and *Insana* v. *Nordenholt Corporation*. In the latter case a petition has been made for a writ of *certiorari* to review the decision of the Court of Appeals in the United States Supreme Court. Whether the United States Supreme Court will review it rests in its own discretion. If it should reverse the Court of Appeals, the dividing line between admiralty remedies and workmen's compensation would be the water line, injuries on board the vessel being in admiralty, and on the dock or pier under the Compensation Law.

---

* Since this opinion was written, L. 1922, ch. 615, has revised the Workmen's Compensation Law. Accidents connected with vessels are now covered by §§ 3 and 113. The Supreme Court of the United States, May 29, 1922, reversed the Court of Appeals in *Insana* v. *Nordenholt Corp.*, thereby, as this opinion suggests, making the water line the dividing line between workmen's compensation and admiralty. The President of the United States signed an act, June 10, 1922, excepting persons other than masters and crews of vessels from the exclusive admiralty jurisdiction of the Federal courts.

Various cases have arisen in the Appellate Division as to what was and what was not maritime. In the case of *McBride* v. *Standard Oil Company of New York*, 188 N. Y. Supp. 90, a chauffeur was transferring barrels of oil to his employer's truck from the barge. He was standing either upon the side of the truck or upon the dock making the barrels safe at the rear end of the truck. The brake giving way, the truck rolled back pinning him at the side of the barge. He was taken to the hospital with a broken leg and died from shock following an operation. The Appellate Division held that this was not maritime and affirmed the award.

In the case of *Wildfeuer* v. *Miller & Gold*, 188 N. Y. Supp. 81, the captain of a barge which was tied up at a dock purchased a bed of a retail furniture dealer, and in delivering the bed on board of the barge the employee of the furniture dealer fell overboard and was drowned. In this case also the award was affirmed.

In the case of *Riedel* v. *Mallory Steamship Co.*, 188 N. Y. Supp. 649, an award was made to a night watchman on a pier and the award was affirmed.

In the case of *Grollman* v. *Schooner & Son*, claimant was a night watchman on a pile driver. He fell from a ladder and injured his ankle. In this case the award was affirmed at the November Term.

In the case of *Mangieri* v. *Olin J. Stephens, Inc.*, an award was made to the widow and children of an employee who was employed as a laborer in a retail and wholesale coal and wood business, but at the time of the accident he was pulling a boat up to the dock and fell overboard. Appeal has been taken to the Court of Appeals from the award of the State Industrial Commission.

In the case of *Kennedy* v. *Cunard S. S. Co.*, 189 N. Y. Supp. 402, it is held that a common-law action can be brought for personal injuries, but that in the trial of said action the rules of maritime law should prevail.

In the case of *Danielson* v. *Morris Dry Dock & Repair Co.*, 189 N. Y. Supp. 410, it is held that a ship when in dry dock for the purpose of repair is in navigable waters and subject to the Admiralty Law.

In the case of *Reinhardt* v. *Newport Flying Service Corp.*, the Court of Appeals has just handed down a decision holding that a hydro-aeroplane is subject to admiralty jurisdiction when it rides at anchor upon the water or is being navigated upon the water.

The only effective remedy for this state of affairs would be for Congress to pass a Workmen's Compensation Law applicable to harbor workers. Senator Johnson has introduced such a bill in the Senate and it has passed the Senate, but has not been reported to the House of Representatives and is still in committee. This again seeks to amend sections 24 and 256 of the Judicial Code so as to provide for compensation for injuries to or death of persons other than seamen. This bill would have to run the gamut of the United States Supreme Court again and might or might not be declared unconstitutional. The court is constituted differently now, Mr. Justice Taft taking the place of Mr. Justice White, and if he should vote with the four who were in favor of sustaining the amendment of 1917 it would remedy the situation. The other bill of Senator Johnson provides for a Federal Compensation Law for seamen.

Another bill has also been introduced in Congress, prepared by Mr. Sherman for the Shipping Board, and assumes to provide for compensation for all maritime workers. The Sherman Bill provides a scale of compensation materially lower than the New York Compensation Act, and as I understand, is not so satisfactory to maritime workers as Senator Johnson's bill.

November 28, 1921.

Very truly yours,
CHARLES D. NEWTON,
Attorney-General.

(b) The Chautauqua Institution is Not a Municipal Corporation (§ 2, gr. 43).*

INQUIRY

Is it necessary to insure the employees of Chautauqua Institution under the Workmen's Compensation Law?

OPINION

It appears by a communication from Wilson C. Price, counsel for Chautauqua Institution, that a question has arisen whether it is obligatory upon the corporation to insure its employees pursuant to the provisions of the State Compensation Law.

Chautauqua now operates under a charter granted by the Legislature by chapter 196 of the Laws of 1902, passed March 21st of that year.

This act provides:

Section 1, that the name of the corporation, Chautauqua Assembly, be changed to Chautauqua Institution.

Section 2 enumerates the purposes as follows: "To promote the intellectual, social, physical, moral and religious welfare of the people." It recites that, for its avowed purpose, it may hold meetings, provide recreation, instruction, health and comfort on its grounds at Chautauqua, conduct schools and classes, maintain libraries, museums, reading and study clubs and other agencies for home education, publish books and serials and do such other things as are needful to carry out its general scheme.

Section 3 consolidates Chautauqua University and the Chautauqua School of Theology, then under the sole control of the same trustees as the corporation, Chautauqua Assembly, with the corporation, Chautauqua, and makes their work an integral part of the work of said corporation.

Section 4 provides that the members shall be —

First. Persons now living and named in the original and supplemental certificate of incorporation.

Second. All persons owning a lease on one or more lots or section of a lot on the lands of the corporation.

Third. All persons elected by the trustees.

Section 5 vests the government and control of said corporation in twenty-four trustees. It provides:

> The provisions of the General Corporation Law, not inconsistent with the act relating to directors and boards of directors shall apply to said trustees.

It further provides for a division of the trustees into classes, A and B, and for their terms of office.

Section 6 provides for the election of trustees of Class A directing that they shall ballot annually at a time and place to be selected by them for five trustees of Class A.

Section 7 defines the method of electing Class B trustees providing that the election be held annually on the second Tuesday of August on the corporation grounds at Chautauqua. The voters at such election are to be members owning leases and intermediate vacancies are to be filled by designation by the trustees of that class.

Section 8 is a classification of the terms of the trustees.

Section 9 continues in force the existing by-laws. The trustees are authorized to enact, alter or repeal by-laws and said by-laws may provide that the executive board of the trustees may enact any rule consistent with law and the by-laws for the management of the business or property of the corporation.

Section 10 authorizes the trustees to sell and lease lands without leave of any court.

Section 11 confirms previous leases made without leave of the court.

Section 12. "Inconsistent Laws.— No provision of the General Corporation

---

* Under L. 1922, ch. 615, this § 2, gr. 43, has become § 3, gr. 17.

Law or of the Membership Corporation Law inconsistent with this act shall apply to said corporation."

Section 13 locates the principal office on the Assembly Grounds at Chautauqua, but it is provided that lawful meetings of trustees may be held without the State.

Section 14 is a repealing clause.

Section 15 saves to the corporation the rights, duties, etc., of the corporation as formerly known.

The act incorporating the Chautauqua School of Theology (chapter 63 of the Laws of 1881), followed the same general lines as the present charter, except that the objects were stated as the teaching of subjects in preparation for the clerical profession, and it was authorized to grant degrees.

Chautauqua University was incorporated by an act passed March 30, 1883, chapter 148 of the laws of that year, with the avowed object of promoting liberal education. It had the right to give diplomas and university degrees.

There is no indication in the various charters of incorporation that an attempt was being made to create municipal bodies for the purpose of local government. There is on the other hand a very evident intent to create eleemosynary corporations in each case.

There are various other acts, passed at different times in the history of the institution, affecting the regulation and control thereof. Among them is chapter 138 of the Laws of 1881 by which the corporation then denominated The Chautauqua Lake Sunday School Assembly was authorized to make and enforce rules in regard to slops and garbage within the corporation grounds and a plan was provided for assessment to defray the expenses thereof.

Another statute is chapter 403 of the Laws of 1886 which prohibited railroad companies from constructing or operating railroads through the institution grounds.

Chapter 312 of the Laws of 1900 constituted the grounds of the corporation a separate health district and made the institution trustees a board of health exempt from local jurisdiction, but subject to the visitation and inspection of the State Board of Health.

In none of these acts has any State fund been made available for the use of the corporation.

The Workmen's Compensation Law (chap. 67, Consolidated Laws), provides in section 2, that,—

> Compensation provided for in this chapter shall be payable for injuries sustained or death incurred by employees engaged in the following hazardous employments: * * * Group 43. Any employment enumerated in the foregoing groups but carried on by the State or a municipal corporation or other subdivision thereof, notwithstanding the definition of the term 'employment' in subdivision five of section 3 of this chapter.

It must be conceded that many of the workers employed about the institution are in fact included within the literal descriptions in the "foregoing groups."

Employment is defined in subdivision 5 of section 3 of the act as follows:

> "Employment" includes employment only in a trade, business or occupation carried on by the employer for pecuniary gain, or in connection therewith, except where the employer and his employees have by their joint election elected to become subject to the provisions of this chapter as provided in section 2.

Subdivision 3 of section 3 of said act is as follows:

> "Employer," except when otherwise expressly stated, means a person, partnership, association, corporation, and the legal representatives of a deceased employer, or the receiver or trustee of a person, partnership, association or corporation, employing workmen in hazardous employments including the state and a municipal corporation or other political subdivisions thereof.

In order to be subject to the terms of the act the institution must be found to be either an employer engaged in an occupation "for pecuniary gain," or it must fall within one of the classifications of Group 43 above cited.

When the Workmen's Compensation Law was enacted in 1913 by chapter 816 of the Laws of that year, the word "employer" was expressly defined as not including the State or a municipal corporation or other political subdivision thereof.

By chapter 316 of the Laws of 1914, the act was amended to define the term "employer" to include "the State and a municipal corporation or other political subdivision thereof."

By an opinion reported at page 191 of opinions of the Attorney-General for the year 1914, it was pointed out that although the State and its political subdivisions were at that time subject to the operation of the law, yet the act did not apply to any activities, State or otherwise, unless the work carried on was for pecuniary gain. This position was sustained in the case of *Allen* v. *The State of New York*, 173 A. D. 455.

It was probably the fact, that the number of instances where the sovereign or its political subdivisions are engaged in any work for pecuniary gain are almost negligible, that led the Legislature, in order to make the State and its subordinate divisions more fully amenable to the operation of the law, to pass the amendment to section 1 of chapter 622 of the Laws of 1916, which added to the various groups of employments subject to the operation of the act, Group 43 above set forth. The term "employment" as there defined is made applicable to the State or its political subdivisions regardless of whether the work is conducted for pecuniary gain or not as limited in the general definition in subdivision 5 of section 3 of the act. All employers properly coming within Group 43 are subject to the operation of the law without regard to the limitations of the general definition of the term "employment."

As stated above the conclusion upon the query advanced will be determined by the answer to two questions: is this one of a class of corporations carrying on business for pecuniary gain, or are its workers engaged in an employment comprehended within the descriptions in the various groups in the compensation law and carried on by it as "a municipal corporation or other subdivision thereof."

Is it a municipal corporation or other subdivision thereof within the meaning of the Workmen's Compensation Law? The determination of this question is not without difficulty. The General Corporation Law, Consolidated Laws, chap. 23, section 3, defines a municipal corporation thus: "A 'municipal corporation' includes a county, town, school district, village and city and any other territorial division of the State established by law with powers of. local government."

Although the authorities are not entirely in accord as to the proper technical classification of public corporations with relation to their functions, they may, for the purpose of the discussion of this question, be divided into municipal or public and quasi public.

There are certain municipal corporations so well defined as to leave no opportunity for question as to their nature. These are the constitutional civil divisions, viz — counties, towns, cities and villages. It is evident that the institution under discussion could in no manner be held to fall within any of these classes of municipal corporations. There is no hint anywhere in the statutes affecting it that it was intended to be incorporated as a city or village. It is true that like all areas of congested population it has been necessary to provide a system of sanitary control which resembles those of cities and villages. This is also true of its lighting and heating facilities and other allied local community interests; but assuming that it had by direct grant all the powers and rights of a legal municipality, still it would be an unconstitutional body. *People ex rel. Yost* v. *Becker*, 203 N. Y. 201.

The question before the court in that case was the validity of the commitment of the relator by a police justice "of the Area or Territory of Sylvan Beach, N. Y." The court set out in considerable detail the acts fixing the character of said area or territory and after discussing the several statutes state that a legal municipal corporation was created unless the Legislature was restrained by the constitution from instituting it. At page 208 of the opinion, Judge Collin, writing, says:

> We hold that the adoption by the constitution of counties, towns, cities and villages as the civil divisions exercising general powers of local government and the local auxiliaries of the state government is equivalent to a direct prohibition against the creation of other civil divisions vested with similar powers.

And again at page 209 —

> It is an element essential in the incorporation of a county, town, city or village that it be incorporated by expressed classification a county, or a town, or a city, or a village. The legislature must, in order that our political system have orderly and intended operation, give to a body corporate having general powers of local government a classification or denomination and thereby fix its proper place in the governmental machinery. The body at the bar is denominated 'area or territory,' and in case we amended it to a village or city, or deemed it thus amended, we would perform a legislative and not a judicial act.

The court held the acts, purporting to incorporate the area, unconstitutional and void.

For the reasons stated there it is clear that Chautauqua Institution is not a legal municipal corporation coming within the constitutional civil divisions. There has been no attempt to constitute it as such, and if there had, such attempt must have failed since there has been no denomination of it as one of the divisions authorized by the constitution.

Let us now recur to the definition of a municipal corporation in the General Corporation Law. It includes, in addition to the civil divisions above referred to, a school district and " any other territorial division of the State established by law with powers of local government." Undoubtedly a school district, even if not included in the definition is a quasi corporation of very limited powers. (*Harris* v. *School Dist. No.* 10, 28 N. H. 62; *Union Free School Dist.* v. *Village of Glen Park,* 109 A. D. 414; *Barnes* v. *District of Columbia,* 91. U. S. 540.) But no argument occurs to me which would bring the present corporation within such a classification, and I, therefore, disregard it There is, however, some question as to the comprehensiveness of the term last above quoted as well as in connection with the true meaning of the term " other political subdivision," and " other subdivision " as used in the Compensation Law. In the Becker case counsel for the respondent argued that the area of Sylvan Beach was legally incorporated under the provisions of the General Corporation Law as a territorial division of the State. The court said this argument required no consideration.

There are several cases in the books holding that there are municipal corporations without the strict classification set forth in the Becker case. *Cook* v. *Port of Portland,* 20 Oreg. 580; 13 L. R. A. 533; *People* v. *Draper,* 15 N. Y. 532; *Barnes* v. *District of Columbia,* 91 U. S. 540.

The Becker case did not decide that there could be no other municipal corporations than those therein set forth. It held that the attempt to incorporate a civil division with the powers similar to a city or village failed because of improper denomination. A city or village could be incorporated in only one way and that method had not been followed. It was therefore unnecessary to consider the other arguments

There is a great amount of illuminating discussion in the opinion in the case of *Dartmouth College* v. *Woodward,* 4 Wheaton, 518, on the essential attributes of corporations, similar to the one here under discussion.

Mr. Justice Storey, (p. 668), points out very clearly that the nature of the work of the institution has no relation to the question of whether a corporation is a public one or not. At page 671 he says:

> The fact, then, that the charity is public, affords no proof that the corporation is also public; and, consequently, the argument, so far as it is built on this foundation, falls to the ground. If, indeed, the argument were correct, it would follow, that almost every hospital and college would be a public corporation; a doctrine utterly irreconcilable with the whole current of decisions since the time of Lord Coke. * * * When the corporation is said at the bar to be public, it is not merely meant, that the whole community may be the proper objects of the bounty, but that the government have the sole right, as trustees of the public interests, to regulate, control, and direct the corporation, and its funds and its franchises, at its own good will and pleasure. Now, such an authority does not exist in the government, except where the corporation is in the strictest sense public; that is, where its whole interests and franchises are the exclusive property and domain of the government itself.

To the same effect see *Regents* v. *Williams*, 9 Gill and Johnson 365; 31 Am. Dec. 72. So here, the fact that Chautauqua Institution is engaged in a work public in its nature, casts no light upon the question at hand and has no bearing upon the inquiry as to whether such institution is a municipal corporation or not. The following extract from Mr. Justice Bradley's opinion in the case of *Mayor, etc.*, v. *Ray*, 19 Wall 468, is quoted with approval in *Wells* v. *Town of Salina*, 119 N. Y. 280, at page 295:

> A municipal corporation is a subordinate branch of the domestic government of a state. It is instituted for public purposes only, and has none of the peculiar qualities and characteristics of a trading corporation instituted for purposes of private gain, except that of acting in a corporate capacity. Its objects, its responsibilities and its powers are different. As a local governmental institution it exists for the benefit of the people within its corporate limits. The legislature invests it with such powers as it deems adequate to the ends to be accomplished.

In *MacMullen* v. *City of Middletown*, 187 N. Y. 37, at page 41, it is said:

> A municipal corporation is a political or governmental agency of the state which has been constituted for the local government of the territorial division described and which exercises, by declaration, a portion of the sovereign power for the public good.

And again, at page 43:

> These principles are familar from their frequent statement in the books and their brief summary here is to emphasize the idea that a municipal corporation is but a part of the machinery of government; that it is the creation of the legislature, which endows it with certain local governmental functions and imposes upon it the performance of certain duties, and that its every feature is subject to the regulation of the legislature in granting the charter and to the right of that body to change, or to modify, as the public interest may demand.

In an Illinois case, the *People* v. *Trustees of Schools*, 78 Ill. 136, it was held that school townships as constituted by the General School Law were not municipal corporations in nature or purpose. Article IX, section 5, of the Illinois Constitution provided:

> The corporate authorities of counties, townships, school districts, cities, towns and villages, may be invested with power to assess and collect taxes for corporate purposes.

The question before the court was whether this section authorized school townships to incur a debt, and having contracted the same, levy and collect taxes to pay it. Mr. Justice Walker held that they were not created to exercise any of the functions of government and hence were not municipal corporations nor were they provided with the officers or power to exercise governmental functions. He contrasts them with cities and towns and states that the latter were created and maintained to aid in the government of the people. He says, page 139: The constitution makers when they used the language, "for corporate purposes," supposed that if any question arose in the construction of the clause, the department of state, applying its principles, would determine the real object of the creation of the body and limit it to that purpose. "They did not, on the one hand, expect that there would be an effort to push the construction to the extent that it would embrace all purposes which might by possibility be brought in the corporate power."

At page 141 he says:

> If, because a municipal corporation, created for governmental purposes, may be invested with such powers, it does not follow that some other body, having some of the attributes of a municipal corporation, may be.

I think it is clear that the State may delegate certain municipal powers to its citizens without constituting them, by such delegation, municipal corporations. There seems to be no plausible reason that could be advanced in support of the theory that the charter of incorporation of the institution, as originally granted, created a municipality. If it is now a municipal corporation, for any purpose, it is because of the various statutes passed dealing with the activities incidental to its broadening growth and expansion. Generally speaking, its members and guests are liable to the town and county laws just as in any other section. It has no statutory territorial limitations or boundaries. It maintains no courts, elects no administrative officers by vote of the people and has no jurisdiction to punish criminals. The basis of representation for governing the institution is determined not by the citizenship of the voter, but upon the question of whether he is a member or not, and that, in turn, is governed by an arbitrary rule of selection based upon ownership of land or the accident of being one of the persons named in the original or supplemental certificate of incorporation or election to membership by the trustees. It is true that the corporation has by special statutes some rights delegated to it which savor of the municipal element. Witness the act creating it a separate health district.

The court in the case in 78 Illinois referred to above, construed a constitutional provision of a similar nature to the question here involved and held that a reasonable rule must be applied.

It may very well be said that, in defining the term "municipal corporation" in the General Corporation Law, as well as in the Workmen's Compensation Law, the Legislature to paraphrase the court's statement in the Illinois case cited above, did not expect that there would be an effort to push the construction of such definitions to embrace all cases which might by possibility be brought within the meaning of the term.

To follow the analogy further, it is, apparently, also true that "because a municipal corporation, created for governmental purposes may be invested with such powers, it does not follow that some other body, having some of the attributes of a municipal corporation," is one.

It cannot be possible that the Legislature intended to include, within the definitions in the General Corporation Law and the Workmen's Compensation Law, above referred to, all corporations, of whatsoever kind, that might be carrying on, as an incident to their main purpose, any activity, which is common to municipalities.

It must be that we are allowed to examine into all the facts in each case to determine in which class a corporation belongs, any other theory would impute to the Legislature an intent foreign to the general principles of law. It is conceded as a matter of course, that where the Legislature has spoken unequivocally, there can be no argument over its *dictum*, but a too literal construction of this definition would be subversive of our ideas of municipal corporations. A municipal corporation is simply an arm or agency of the State established for governmental purposes in some certain locality. It is a trustee for the whole State of its property and powers.

It has already been demonstrated that Chautauqua could not have been constituted a municipal corporation proper and if it is a public corporation within the definition, it must be a quasi corporation. These are defined as governmental agencies created solely to administer the general State laws. They are involuntary organizations imposed by the State without considering the wishes of the community. They are not chartered and clothed with documentary evidence of authority like a full corporation and have no incidental powers or inherent corporation attributes. 28 Cyc. 132, and cases cited.

Measured by this rule the institution is not a quasi public corporation.

Suppose the Legislature passed a law repealing the act which created the institution a separate local health unit. The rules and regulations now in force would still have to be enforced practically as they are today and just as they would be if the project were being carried on by an individual. Would the corporation be any more or less a municipality by reason of such repeal? The local regulations and control, necessitated by the activities and magnitude of the project, are incidental to the main purposes of the corporation and are no different than those of any large institution privately endowed and supported. The fact that its management has been facilitated by special laws could not change the nature of the corporation itself. The regulation of its activities would have to be carried on if the special laws were repealed. As well say that a private college, hospital or individual activity becomes a municipal corporation within the meaning of the compensation act as soon as the internal affairs thereof require sanitary, police and health regulations. To hold that this institution is a municipal corporation would be equivalent to including within the term practically every form of activity where any considerable number of people are gathered in one locality with the resulting need for local sanitary and police protection. The corporation has by charter no delegation of governmental powers except those necessary to the control of its private business. The grants of quasi public rights by special statutes could not change the whole purpose of its creation. To be a municipal corporation it must have been created primarily and essentially for governmental purposes. We have seen that such attributes of a public or municipal character as it has have been incidental to its other and avowed purposes.

The various special acts, authorizing a sewage system, creating it a separate health district, etc., could not have changed it from an eleemosynary to a municipal institution. That would, in effect, be accomplishing by implication and indirection what the constitution has prohibited being done directly, namely, instituting a municipal corporation without denominating it as such. *People ex rel. Hon Yost* v. *Becker*, cited above. It would be more reasonable to infer that these acts created a separate municipal corporation in each case. This, I believe, is untenable.

Let us now consider the question whether it is an employer of labor for pecuniary gain within the statutory definition.

The handbook of information issued by the institution states that the institution is carefully administered to keep the annual expenditures safely within the budget. That with the exception of panic years there is a surplus which is devoted to plant renewals and improvements. That it is dependent upon its friends for contributions and endowments to make expansion. It states: "No stockholders are drawing dividends from Chautauqua. No large salaries are paid." All receipts, income from various sources, such as endowments, fees charged for admission at the gates, tuition fees, etc., are applied to carrying on and expanding the work. Its avowed purpose is the carrying on of educational and religious work.

The facts at hand indicate that there are various enterprises carried on within and about the grounds of the corporation, which, if directed and managed by it directly would undoubtedly make it an employer of labor for pecuniary gain within the meaning of the statute.

Information furnished by counsel for the institution, however, shows that the business enterprises referred to are not carried on by the corporation but by private interests. He says:

> The lumber yard is located outside of the grounds and is conducted by Harman Farr as a private enterprise. The blacksmith shop is in the same class. Various stores are run as concessions by private persons.

> For instance, the institution owns the building, a part of which is occupied by the Clarke Baking Company of this city, the company paying a fee for the concession which covers the rent of the building. The company agrees to carry sufficient stock of baked goods to meet the demand, not to charge excessive prices, and all profits belong to the Baking Company. This arrangement is similar to that carried out in the other cases.

It must be determined whether the institution, by granting leases and concessions to persons conducting independent business activities and accepting rent therefrom, becomes an employer for pecuniary gain.

In a recent case, *Castor* v. *Collegiate Baptist Church* (not yet reported), one of the disputed questions was whether the defendant was an employer of labor for pecuniary gain in renting and conducting a loft building, which it owned, for factory purposes.

Castor, an elevator conductor in said building in the employment of the church, was injured in the course of his employment and subsequently died as a result thereof. The State Industrial Commission held that the church was an employer within the statute and made an award to the widow. Commissioner Boyle, writing for the Commission, says:

> There is nothing whatsoever to differentiate the business of this employer from that of any other conducting a building rented for business or manufacturing purposes.

It is significant that the defendant was in actual charge of and was "conducting" the building. The Appellate Division affirmed without opinion.

In *Uhl* v. *Hartwood Club*, 177 A. D., 41; 163 N. Y. S., 744; affirmed 221 N. Y., 588, it appeared that the defendant was a membership corporation organized to acquire land, ponds and streams of water for a fishing and hunting preserve and as a pleasure resort for its members. It sold cottage sites, had the right to erect and maintain a club house and the powers incidental to said purposes. It acquired 6,000 acres of land mostly timber. From this tract it sold lumber, railroad ties, telegraph poles and firewood. The cutting was carried on by club employees throughout the greater part of the year and the profits went into the club treasury and in some cases was paid to members as dividends. One of the club employees was killed while engaged in cutting timber and upon the application of the widow for an award under the Workmen's Compensation Act, the question arose whether the club was estopped to plead that it had no right to engage in the particular business in which Uhl was killed, for pecuniary gain.

The Appellate Division (Judge Woodward dissenting), held that the club could not defend on the ground that the occupation of decedent was *ultra vires.*

In the Court of Appeals it was said that whether or not a club or individual was engaged in forestry for pecuniary gain was a question of degree. In a memorandum opinion, page 589, they say:

> But where the owner of a large tract of woodland cuts and sells the lumber upon it regularly, although that work may be incidental to his main business, he comes within the definition of the statute.

The question came up for consideration in *Vine* v. *West End Presbyterian Church*, 190 A. D., 886. Vine, a carpenter, employed by the church, was injured while engaged in his work. All interested parties agreed upon a settlement by which the injured workman received compensation for thirty-two weeks. Subsequently and on April 16, 1917, the Commission terminated the agreement and closed the case on the ground that the church was not conducting a business for pecuniary gain and, therefore, was not under the Compensation Law.

Subsequently application was made to reopen the case and to enforce the agreement. Commissioner Sayer in his opinion states that the principal question is whether an employer conducting a hazardous occupation but not operating for pecuniary gain may be held under the Compensation Law where he has agreed to pay compensation and the same has been accepted by an employee for a long period and no appeal has been taken from the decision of the Commission approving the agreement.

He also states that the church could avail itself of the defense that it was not an employer conducting a business for pecuniary gain but neither the employer nor the insurance carrier made such defense. The approval of the agreement by the Commission was in effect an award and no appeal having been taken within thirty days said agreement continued in force. He then discusses the jurisdiction of the Commission to terminate the agreement and holds that they have the right to set aside their order terminating it and decides that compensation should be awarded to date and the case continued for consideration of future disability.

An appeal was taken from this decision to the Appellate Division (190 A. D. 886), and that court reversed the award and dismissed the claim without opinion which was in effect holding that the defense that the employer was not engaged in business for pecuniary gain was a valid defense and the church was not estopped to plead it at any time.

In the case of *Francisco* v. *Oakland Golf Club*, 193 A. D. 573, it appeared that one Francisco was a cook employed by defendant, a membership corporation. It maintained a restaurant on the *a la carte* plan for members and their guests. While at work cooking a chicken in the kitchen of the restaurant he was fatally burned. His widow made a claim for compensation. The State Industrial Commission made an award in her favor and an appeal was taken to the Appellate Division. That court reversed the award and dismissed the claim. The opinion, written by Mr. Justice H. T. Kellogg, at page 574, says:

> The club was maintained exclusively for social purposes and to provide members with opportunities to engage in the game of golf and other outdoor sports. It was supported by annual dues paid by members, and was not engaged in any business enterprise whatsoever. Even its restaurant, which was operated to promote the social activities of the club, was so conducted that its yearly disbursements for maintenance exceeded its yearly receipts. No dividends were distributed by the club to its members, nor was it within the contemplation of its organizers or members that dividends should ever be paid. It is entirely clear, therefore, that the deceased employee was not employed in a trade, business or occupation carried on by his employer for pecuniary gain within the meaning of subdivision 5 of section 3 of the Workmen's Compensation Law.

It is apparent from the examination of the above authorities that a corporation such as Chautauqua could engage in a business enterprise for pecuniary gain within the meaning of the Compensation Law. All authorities consulted, however, holding institutions liable under the act, where they were not primarily organized and carried on for private business purposes, have been those where the employers had direct charge and supervision of the work. It is clear that a club or institution cannot directly engage in or carry on a private enterprise for profit and thereafter when an injured employee makes a claim for compensation under the act, avoid liability by pleading that it had no authority to engage in such business. See cases cited above.

It is plain that, as to the employees of the business enterprises carried on at Chautauqua by lessees or holders of concessions from the institution and of which it does not have the direct conduct and direction, it would not be liable under the Compensation Law. Such employees are not its employees. It is also equally clear that if any of its business activities are, in fact, directly within its management and control and operated for pecuniary gain, and otherwise within the statutory description, as to these, it is clearly within the purview of the act and liable the same as any other employer.

It should also be noted that, if it conducts any enterprises falling within the class last above set forth, the patrolmen and possibly others of its employees, under the law as stated in *James* v. *Witherbee-Sherman & Co.*, *Inc.*, 2 State Department Reports, 483, would properly fall within the protected class.

Of course, there can be no question about the liability of the employers who operate the various independent enterprises. Assuming that their employees come within any of the classes designated as hazardous in the statute, they are clearly within the act.

Since Chautauqua is clearly within the constitutional inhibition preventing its creation as a full municipal corporation and, for the reasons herein stated, cannot be held to be *quasi* public in its powers, I conclude that it does not fall within any of the classes set forth in Group 43 of section 2 of the act. As to the remaining question, whether it is included within the classification of corporations carrying on business for pecuniary gain as defined by the Workmen's Compensation Act, I am satisfied that, so far as any business activity is concerned, which is carried on through concessions or leases and by independent management, and from which the institution simply receives rents without sharing in the direct conduct or profits of the same, it is not.

This conclusion, however, must be qualified by the statement that, if there are any business enterprises carried on by its employees for gain and coming within the classes of hazardous employments enumerated in the act, the receipts of which go directly into the corporation's treasury, as to such employment of labor it is within the Compensation Act. And assuming such a state of facts other employees, as, for example, the local policemen paid by the institution, might also be brought within the operation of the act.

I am of the opinion that Chautauqua Institution, except as the rule is qualified above, is not covered by the provisions of the Workmen's Compensation Law.

Dated, *April* 16, 1921.

CHARLES D. NEWTON,
Attorney-General.

To WILSON C. PRICE, ESQ., *Jamestown, N. Y.*

(c) Volunteer Firemen Are Not Entitled to Compensation (§ 2, gr. 43).*

July 25, 1921.

IRA R. SEARBY, ESQ., *Secretary, Alpha Hook, Ladder and Hose Company, Roosevelt, L. I., N. Y.:*

DEAR SIR.— In reply to your inquiry of the 21st, would state that there is no provision in the Workmen's Compensation Law for volunteer firemen in a village who are injured while fighting fire.

I do not think a volunteer fire company would be liable for injuries to third persons while going to or returning from fires.

Very truly yours,
CHARLES D. NEWTON,
Attorney-General.

(d) Only Public Employments Enumerated in the Law are Within its Coverage; Preferable Insurance (§ 2, gr. 43).†

October 13, 1921.

JAMES O. SEBRING, ESQ., *Corning, N. Y.:*

MY DEAR SIR.— In reply to your inquiry of the 10th inst., would say that if the city takes out an insurance to cover its employees it would cover any employee who receives an accident in one of the first forty-two hazardous groups specified in the Compensation Law. It would not, however, be necessary for the city to pay a premium except upon such employees as come within those groups and are included in the payroll as audited by the insurance company.

---

* Under L. 1922, ch. 615, this § 2, gr. 43 has become § 3, gr. 17.

† Under L. 1922, ch. 615, this § 2, gr. 43, has become § 3, gr. 17 and § 35, amended radically has become § 50, subd. 4.

The State insurance fund insures employees at a lower rate than the stock insurance companies, about 15 per cent. lower I think. If your county adopted the taxation system as specified in section 35 of the Workmen's Compensation Law, the town, village, city and county employees would be covered by such town, village, city or county under the taxation system, by which they would not be required to insure but would pay the awards as they were made.

Very truly yours,
CHARLES D. NEWTON.
Attorney-General.

(e) Employees of the Palisades Interstate Park are State Employees (§ 2, gr. 43).*

November 5, 1921.

HON. HENRY D. SAYER, *State Industrial Commissioner*, 124 *E.* 28*th Street. New York City:*

DEAR SIR.— Replying to your letter of the 28th ult. with reference to the Palisade Park Commission and in answer to your questions would say:

1. The Palisade Park Commission is, I think, one of the agencies of the State government and, therefore, its employees are covered by the compensation insurance placed by the State of New York in the State insurance fund.

2. There will be no difference in the coverage of employees as to whether a fee is charged for the service of the employee or not, as the question of pecuniary gain does not apply to State employees as specifically stated in group 43.

3. I do not think there should be any distinction between employees paid by State appropriations and those paid from private funds.' If the employees are State employees they are such no matter from what source their wages or salaries are paid.

4. All employees of the commission would not be covered but only those specifically enumerated in the first forty-two groups or in group 44 or in the first group 45.

Hoping this answers your inquiry, I am,

Very truly yours,
CHARLES D. NEWTON,
Attorney-General.

(f) Inflammation Due to Constant Wetness of Feet is not Accidental (§ 3, subd. 7). †

October 29, 1921.

JOHN W. GENAWAY, ESQ., 17 *E. Main Street, Malone, N. Y.:*

DEAR SIR.— Your letter to Mr. Bates, asking opinion with reference to a man working in a paper mill, has been turned over to me for reply. I am inclined to believe that the situation you speak of, where a man contracts thrombo-phlebitis from having wet feet all the time, would be an occupational disease and not an accidental injury. As an occupational disease it is not enumerated in the schedule contained in the Workmen's Compensation Law so that I am quite doubtful as to his having any claim under the Workmen's Compensation Law unless you can prove some specific accident that contributed to the condition.

Very truly yours,
CHARLES D. NEWTON,
Attorney-General.

---

* Under L. 1922, ch. 615, this § 2, gr. 43, has become § 3, gr. 17.
† Under L. 1922, ch. 615, this § 3, subd. 7, has become § 2, subd. 7.

(g) An Employer is Liable for Treatment and Care Though His Injured Employee Sues Third Party; Recovery of Amount (§§ 13, 29).

November 9, 1921.

HON. HENRY D. SAYER, *State Industrial Commissioner*, 124 *E. 28th Street, New York City:*

DEAR SIR.— In reply to your letter of the 7th inst. in reference to liability for medical services where the employee elects to sue a third party,

1. I am of the opinion that the employer is liable under the Compensation Law for medical and hospital treatment and care furnished to his employee, even if the employee subsequently elects to sue a third party. The theory of the Compensation Law is that the employer is in the first instance liable in all cases for accidents arising out of and in the course of employment specified in the groups. There is, therefore, a primary liability upon the employer to furnish medical and hospital treatment as provided in that law. The fact that an employee elects to sue a third party does not relieve the employer from this liability as he is still liable for any deficiency in case the employee collects from the third party. I also think you are right in saying that the expense for medical treatment is not technically compensation but is a liability imposed by law upon the employer in case of accidental injuries.

2. In answer to the second inquiry, would say that in an action by an employee against the third party he could no doubt include medical expense in his claim, provided he had paid for the same as that would be part of the damages which before the Compensation Law was passed he might include in such an action. If he, however, had not paid for the medical expense and was not liable for it, I do not think he could include it in his action.

As to what right the employer would have to recover amounts paid by him for such medical expense, it is definitely decided by the Appellate Term in the case of *Bossert & Sons* v. *Piel Bros.* that the employer could not recover such expense from a third party who had been sued by the employee. As to whether the employer could recover from the employee such expense, when the latter had recovered either by suit or compromise a larger sum than the amount of his compensation, there may be some doubt. I am, however, inclined to think that where the employee had requested medical service which had been given by the employer, and then the employee does recover a larger sum than his compensation, the employer could recover from the employee such medical expense in an action of *assumpsit*. As there is some doubt about this, it might be well while the Compensation Law is in the process of amendment to have some amendment inserted that would cover this question.

Very truly yours,
CHARLES D. NEWTON,
Attorney-General.

(h) The State May Carry an Employee on its Payroll While He is Receiving Compensation for Permanent Partial Injury (§ 15, subd. 3).

September 6, 1921.

STATE HOSPITAL COMMISSION, *The Capitol, Albany, N. Y.:*

GENTLEMEN.— Receipt is acknowledged of yours of the 8th ulto., enclosing letter from the Superintendent of the Central Islip Hospital, dated August 6, 1921, copy of letter from the Industrial Commission, dated August 2, 1921, copy of letter from the Superintendent of the Central Islip Hospital, dated June 7, 1921, together with his statement as to the case of said Christian Schultz and the circumstances and extent of his injuries, letter of Lewis M. Farrington, Assistant Secretary of the State Hospital, dated July 11, 1921, copy of letter of G. A. Smith, Superintendent, dated July 1, 1921, and original letter of the Attorney-General, dated July 20, 1921.

With all the facts before me, I am of the opinion that it is legal to carry said Schultz on the payroll and to pay him as special attendant in the carpenter shop in the Central Islip State Hospital, while he is at the same time receiving compensation awarded him by the Industrial Commission for the loss of a part of his first, second and third fingers of his right hand, due to an accident while working in the carpenter shop of the said hospital. This conclusion is based upon the assumption that the employee must be qualified to do the work assigned to him and is actually doing satisfactory work, otherwise he would not be continued by the superintendent of the hospital.

He cannot be said "to be on two payrolls at the same time," as is suggested in the letter of Superintendent Smith, dated July 1, 1921.

The compensation he is receiving because of his injury can hardly be called pay or wages. It is compensation, an award granted according to law for serious injury and loss. It might be said to be in the same category as a judgment that might have been recovered against the State.

I might add that in my opinion his injury is a permanent one, since his fingers cannot be restored to their former condition and usefulness.

Very truly yours,
CHARLES D. NEWTON,
Attorney-General.

(i) Award is Permissible for Temporary Total or Permanent Partial Disability but Not for Both; Computation (§ 15, subds. 2 and 3).

NORWICH, N. Y., *October* 29, 1921.

OFFICE OF THE ATTORNEY-GENERAL, *Albany, N. Y.:*

DEAR SIRS.— I understand that your office has a branch which takes care of cases arising under the Workmen's Compensation Law, and is kept posted on the decisions and ruling under same. I am representing an injured employee, who has questions involved upon which I can find no ruling. I am stating the questions involved, and would ask that you refer me to decisions upon them, or rulings, or, if none, your opinion.

1. Employee has 50 per cent loss of use of leg and 25 per cent loss of use of an arm. Is he entitled to an award of 75 per cent for the period of the shorter period for a leg and of 25 per cent. for the difference between a leg and arm?

2. Where his wages exceed the maximum ($50 to $60 per week), is he entitled on a 75 per cent loss of use, to 75 per cent of two-thirds of his wage up to $20 per week?

3. Employee had a total temporary disability for one year, from injury to his back, in the same accident. When does the award for the leg and arm commence to run; date of injury or date of end of temporary disability, and in case the loss of arm and leg is less than the maximum, does the maximum paid under the total temporary disability reduce the amount due on the award for the arm and leg.

The figures stated herein are estimated, but the situation is an actual situation, and I shall appreciate your advice.

Very truly yours,
FRANK W. BARNES.

October 31, 1921.

FRANK W. BARNES, ESQ., *Norwich, N. Y.:*

DEAR SIR.— In reply to your letter of the 29th inst., would say that the Court of Appeals has held that where a man loses a leg or an arm or other specific member, and also is temporarily disabled, there cannot be concurrent awards, and that if the award for the specific member extends beyond the temporary disability, i. e., in the number of weeks, that there can be no recovery for the temporary disability (*Markoffer* v. *Markoffer*, 220 N. Y. 543). If the employee's wages exceed the maximum, as stated by you ($50 or $60 a week), the claimant is entitled to the maximum of $20 per week, and if he has lost 50 per cent of the use of the leg and 25 per cent of the use of the arm, he would be entitled to 50 per cent of the loss of the leg, or 144 weeks, and also 25 per cent of the loss of the arm, or 78 weeks.

Very truly yours,
CHARLES D. NEWTON,
Attorney-General.

NORWICH, N. Y., *November* 1, 1921.

ATTORNEY-GENERAL, *Albany, N. Y.:*

DEAR SIRS.— I thank you for your kind letter of October 31, touching Workmen's Compensation decisions, and I thank you for your reference to *Marhoffer* v. *Marhoffer*.

Your letter seems to indicate, but possibly not fully considered, the following points, and I am taking the liberty to bother you further.

1. Is it not possible for the commission to award a 50 per cent loss of use of a leg, by awarding 50 per cent of two-thirds of the weekly wage for a period of 288 weeks, but not over $20 per week; instead of the maximum amount for 50 per cent of the weeks. This would nearly double the award in this case. For employee received nearly $60 per week, and 50 per cent of two-thirds of that amount would be nearly $20 for 288 weeks. If there is any decision or ruling on this point, would you kindly advise me.

2. Would employee be entitled to consecutive awards, for 144 weeks for 50 per cent loss of use of leg, and for additional 78 weeks for 25 per cent loss of use of arm, making a total of the maximum of $20 per week for 222 weeks for both? (in case the above question is answered in the negative).

3. In the Marhoffer case, the temporary total disability was the result of the loss of the hand, which was the same hand for which awarded partial permanent disability. Near the top of page 546, the court says "The provisions in paragraph 3 of section 15, * * * does not by its terms exclude compensation for other injuries as defined in other paragraphs." In this case, the total temporary disability is *outside* of the injury to the leg and arm (principally) and is an injury to the back, and awards have been made for total temporary disability for the period of over a year, on account of injury to back. Would an award for the arm and leg at this time, come under that decision (*Marhoffer* v. *Marhoffer*), and be partially off-set by the awards for the back, already made.

I again thank you for your interest shown, and shall be glad to hear from you again upon these points. I realize that my former letter did not state sufficient facts to bring out the points which are involved.

Very truly yours,
FRANK W. BARNES.

November 2, 1921.

FRANK W. BARNES, *Norwich, N. Y.*

DEAR SIR.—In reply to yours of the 1st inst., would say that the Appellate Division attempted to do what you indicate in your first question in the case of *Phonville* v. *New York & Cuba S. S. Co.*, but this was reversed by the Court of Appeals (226 N. Y. Rep. 618, 622).

As to your second point, I think that the awards where there is 50 per cent. loss of the use of the leg and 25 per cent. loss of the use of the arm would be consecutive awards.

As to your third point, I am not entirely clear whether a total temporary disability for some injury outside of injury to arm and leg could be compensated. I am inclined to think not, but that would be subject to the decision of the Appellate Division and Court of Appeals. I am quite sure, however, if the temporary total disability exceeds the number of weeks for the award for the loss of specific members that an award could be made for the temporary total disability.

Very truly yours,
CHARLES D. NEWTON,
Attorney-General.

(j) A County Board Should Levy Compensation Solely upon the Town, Village or City Whose Employee Has Incurred Injury (§ 35).*

March 29, 1921.

EARNEST C. HORNBURG, ESQ., *Frick Building, Wellsville, N. Y.*

DEAR SIR.— In reply to yours of the 28th inst., would say that section 35 of the Workmen's Compensation Law is not entirely clear as to its meaning and possibly might be interpreted as allowing the county to raise money from the county for the purpose of paying claims against towns and villages for compensation of workmen employed by them. However, we must interpret the section in question with reference to the other provisions of the law, and especially of the County Law. The County Law (sec. 12, subds. 2, 3, and 4) provides:

"2. Audit all accounts and charges against the county, and direct annually the raising of sums necessary to defray them in full.

3. Annually direct the raising of such sums in each town as shall be necessary to pay its town charges.

4. Cause to be assessed, levied and collected, such other assessments and taxes as shall be required of them by any law of the state."

These provisions assumed that accounts and charges against the county shall be raised by the county while those against the town shall be raised in the towns, and read in connection with the County Law it seems to me that the interpretation to be placed upon section 35 in question should be that each municipality, town, county and village shall pay its own charges so far as compensation is concerned; and that section 35, so far as the county is concerned, authorized the county to take action through its board of supervisors in adopting a general tax system for the county and other municipalities in the county. Any other interpretation might run counter to section 10 of article VIII of the New York State Constitution, which provides:

"Nor shall any such county, city, town or village be allowed to incur any indebtedness except for county, city, town or village purposes."

This has been interpreted in the case of *Deady* v. *Village of Lyons*, 39 App. Div. 139, as a prohibition against a village raising money by taxation to provide for the making of additions and repairs to the court house in the county of Wayne. The opinion of the referee in that case, which was adopted by the Appellate Division and is printed in the report above mentioned, holds that the article of the Constitution in question prohibited a gift to a corporation even when the corporation was the county of Wayne.

I think, therefore, that where the taxation system is adopted under section 35 that the amounts paid therefor should be charged against the town, county, city or village whose employee was granted compensation.

If the village operates an electric light and water system, I am of the opinion that the employees engaged therein would be covered by the Workmen's Compensation Law.

Very truly yours,
CHARLES D. NEWTON,
Attorney-General.

CIVIL SERVICE LAW

A. PROBATIONARY APPOINTEES

(a) In Absence of Rule Fixing Probationary Term of Non-competitive or Exempt Appointee, Appointing Officer May Fix Such Term; He May Drop Appointee Without Hearing (§§ 9, 22).

INQUIRY

Shortly before January 1, 1921, the Superintendent of Public Buildings appointed certain veterans of the World War to positions as laborers in the Department of Public Buildings. The term of office of the Superintendent of Public Buildings expired and the new superintendent was appointed on January 1, 1921. The outgoing superintendent did not fix any probationary terms for the laborers so appointed. May their probationary terms be fixed by the new superintendent? What are their rights under section 22 of the Civil Service Law as amended by chapter 833 of the Laws of 1920?

---

* For a like opinion see Report of Industrial Commission for 1920, p. 270. Under L. 1922, ch. 615, this § 35, amended radically, has become § 50, subd. 4.

OPINION

The first Civil Service Law enacted in this State was passed in 1883. The first Civil Service Commission was appointed by Governor Cleveland in the same year. And among the first rules it promulgated (approved by the Governor December 6, 1883) was one reading as follows:

> Rule XL.
>
> Every original appointment or employment in the civil service shall be for a probationary term of three months, at the end of which time, if the conduct and capacity of the person appointed or employed shall have been satisfactory, the probationer shall be absolutely appointed or employed, but otherwise his employment shall cease.
>
> Every officer under whom any probationer shall serve during any part of such probation shall carefully observe the quality and value of the service rendered by such probationer, and shall report in writing, to the proper appointing officer, the facts observed by him, showing the character and qualifications of such probationer and of the service performed by him; and such reports shall be preserved on file.

Thus, at the very inception of civil service reform in this State, one of the principles adopted was the test of merit and fitness by a probationary term in all cases. The rule applied to everybody over whom the commission had jurisdiction, including everybody now in the "classified service." At that time the classified service was divided into four classes designated A, B, C, and D. But the rule applied to all. In the classes in which examinations were required, the probationary term constituted an additional test of merit and fitness.

This was before there was any "Veteran Act."

In 1884 the first Veteran Act was passed, and the Civil Service Law was amended to accord certain special privileges to veterans of the Civil War. But the rule about probationary appointments remained unchanged. And it remained unchanged in substance when the Veteran Act was amended in 1892 to cover volunteer firemen and when the civil service principles were put into the Constitution in 1894 — and until the first consolidation of the Civil Service Laws in 1899, when it was made a part of the consolidated statute.

The purpose and effect of the rule and of similar rules made by municipal civil service commissions were considered by the courts in many cases, and are well settled. The purposes was explained by the Court of Appeals in *Kastor* v. *Kearny*, 164 N. Y., 64, as follows:

> The object of the probationary period is to enable the head of the department not only to ascertain the fitness of the probationer but to learn whether on the whole he is a satisfactory and agreeable person to have serve in the office and one who will become a reasonably efficient officer.

The effect of the rule was to divide an employment into two separate and distinct terms; the first probationary, the second permanent. Judge Gaynor, reading for a unanimous Appellate Division in *People ex rel. Archer* v. *McAdoo*, 110 A. D. 740 (affirmed, 184 N. Y. 575), said:

> The effect of these provisions is to make the probation period a separate and distinct term, the statute using that very word. It does not run into and become part of the permanent tenure. It ends and there is then an appointment to the permanent tenure. The Municipal Civil Service rule provides that a failure of the appointing officer to

> notify the probationer during his probationary term that he will not be retained 'shall be equivalent to permanent appointment.' This does not destroy the separate identity of the probation term and the necessity for an appointment to the permanent tenure. On the contrary, the rule intends such an appointment and provides for an 'equivalent' of a formal appointment. The effect is the same as though a formal appointment were made indispensable.

The effect of the rule upon veterans protected against removal for cause except after a hearing upon charges, was to make it possible for an appointing officer to dispense with their services at the end of the probationary period without any hearing — in other words their veterancy did not entitle them to reappointment after the expiration of their probationary terms. In *People ex rel. Hoeges* v. *Guilfoyle*, 61 A. D. 187, it was held that even a veteran of the Civil War could be removed without trial or hearing, at the end of his probationary term. This was before the Civil Service Law excepted Civil War Veterans from the requirement that all appointments be probationary. There have been a number of cases in New York City and the counties contained therein where competitive employees are not subject to removal without an opportunity to explain, the courts always holding that while they could not be removed without such opportunity before or after the expiration of the probationary term, they could be so removed at the expiration of the probationary term. *People ex rel. Walter* v. *Woods*, 168 A. D. 3; *People ex rel. Holston* v. *Woods*, 167 A. D. 899; *People ex rel. Schlesinger* v. *De Forest*, 83 A. D. 410; People ex rel. *Looram* v. *Henderson*, 77 Misc. 25; *People ex rel. White* v. *Color*, 56 A. D. 171; *Matter of Dalton* v. *Darlington*, 123 A. D. 855.

The rule is the same as in the case of a veteran appointed to office for a definite term of years Unless he is a veteran of the Civil War, who was entitled as of right to an original appointment, he is not entitled as of right to a re-appointment. In other words, veterancy does not entitle an officer to hold over after his term has expired. (*In re Tiffany*, 179 N. Y. 455; *Williams* v. *Darling*, 67 Misc. 205.)

In 1899 the various civil service statutes and veteran acts which had been enacted since 1883, together with many provisions which had appeared only in the rules, were combined in one Consolidated Civil Service Law. (L. 1899, c. 370.) Section 8 of that act (which corresponds to section 9 of the present Civil Service Law), defined the unclassified and classified services in the same way that they are defined today and added:

> All appointments or employments in the classified service shall be for a probationary term not exceeding the time fixed in the rules.

Thus the long-established rule was made a part of the statute, with this change — before 1899 the provisional appointments were all for three months exactly. Afterward it was different. Previously, when an appointing officer notified a subordinate of his appointment, it did not matter whether he indicated that it was a three-months term, as required by the rule, for the rule limited his power of appointment in the first instance, and the appointee would only be entitled to serve three months anyhow, unless kept on afterward. The statute was obviously drawn in contemplation of the existing rules but with intent to modify them. Instead of allowing the Civil Service Commission in its rules to fix the probationary term, the law permitted it to fix only a maximum, leaving it to the appointing officer to fix the actual probationary term in each case, not to exceed the maximum fixed by the rules.

The rule theretofore had always applied to all positions "in the civil service" — but the Commission had no jurisdiction over the unclassified service, so in effect the rule applied to the entire classified service. The statute contemplating the continuance of the same or some similar rule, provided for probationary appointments to all positions in the classified service. But the Commission, in making rules to conform to the amended statute, fixed a maximum term of probationary appointment for positions in the competitive class only. The reason for this was probably that they believed that in the exempt and non-competitive classes the appointing officers should have unqualified power to remove even veterans, and by not limiting the probationary term they would make it possible for appointing officers to retain indefinitely the power to remove veterans in those classes — for section 21 (now section 22) of the statute at that time provided:

> A person serving under a probationary or provisional appointment shall not be deemed to be holding a position within the meaning of this section.

This language remained in the law only three years, being eliminated by Laws 1902, chapter 270, which statute also excluded Civil War Veterans from the requirements of section 8 that all appointments be provisional. The amendment of 1902 was not followed by any corresponding amendment of the civil service rules. The rule continued to limit the term of probationary appointments only in the competitive class. And as the rule stands today it provides:

(Rule XII, Paragraph 1)

> Except in the case of veterans of the Civil War, honorably discharged from the military or naval service of the United States, every original appointment to or employment in any position *in the competitive class* shall be for a probationary term of three months, and an appointing or nominating officer in notifying a person certified to him for appointment or employment shall specify the same as for a probationary term only; and if the conduct, capacity and fitness of the probationer are satisfactory to the appointing officer, his retention in the service after the end of such term shall be equivalent to his permanent appointment, but if his conduct, capacity or fitness be not satisfactory he may be discharged at the end of such term.
>
> Whenever two or more persons appointed from the same eligible list are serving as probationers in the same department, and there is necessity for a reduction of the force of such department affecting such persons, they shall be preferred for retention in the order of their original standing upon such list.

The statute says all appointments in the classified service shall be for a probationary term, leaving it to the rules to fix the maximum length of that term. The rules fail to fix any term in the non-competitive and exempt classes. What is the result? Certainly the Civil Service Commission cannot defeat the absolute mandate of the statute by neglecting to fix a maximum. The appointing officer is not only entitled to make a probationary appointment in order to judge whether he wishes to make a permanent appointment, but he is required by law to do so. The failure of the civil service rules to fix a maximum cannot defeat the right or the duty of the appointing officer. In the absence of any maximum fixed by the rules the appointing officer may make the probationary term as long or as short as he pleases.

But the statute absolutely requires a probationary term.

Where an appointing officer makes an appointment without designating the length of the probationary term, one of three things must be the result: either (1) he thereby defeats the statute, or (2) his appointment is void, or (3) he is still at liberty to fix the duration of the probationary term. I cannot concede that the appointing officer by neglecting a duty can repeal a mandatory statute. On the other hand, the fixing of the probationary term being only one of many formalities, surrounding an appointment, its omission, to my mind, does not necessarily render the appointment void *ab initio* — at least the appointee becomes a *de facto* officer or employee. So it must be that the appointing officer retains the right (and duty) to fix the probationary term until he exercises it.

The office of Superintendent of Public Buildings is a continuing one, so the fact that there has been a change in the incumbent of the office makes no difference. I believe that when an appointing officer has once fixed a probationary term under section 9 of the Civil Service Law, he is *functus* *officio* and cannot change it; but until he does fix it he retains the right and remains under a duty to fix it.

I therefore advise you that in my opinion you are at liberty to fix the probationary term of employees, appointed by your predecessor just before his retirement, in those cases where he did not fix it. And I advise you that it is in your discretion to retain such appointees after the expiration of their probationary terms, or to let them go. Failure to give notice, prior to or at the end of the probationary term, to any you wish to drop, will probably be equivalent to a permanent appointment, so notice should be given to any of them whom you determine to be unfit or unsatisfactory.

There is no probationary term in the case of Civil War Veterans, but in the case of any other person protected by section 22 of the Civil Service Law, that statute does not require that he be given a hearing, on charges, etc., before being refused a permanent appointment at the end of his probationary term.

Dated, *February* 21, 1921.

CHARLES D. NEWTON,
Attorney-General.

To HON. OTTO JANTZ, *Superintendent of Public Buildings, Albany, N. Y.*

B. WAR VETERANS *

(a) Provision Pensioning Civil War Veterans at One-half Salary is Retroactive; Maintenance Counts (§ 21-a).

The fiscal supervisor asks for an opinion as to the application of section 21-a of the Civil Service Law to certain situations existing in your department with reference to retirement and pensions.

Section 21-a originally read as follows:

> *Section* 21-*a. Retiring Veterans of the late Civil War and granting them pensions.* Every soldier, sailor or marine of the army or navy of the United States in the late civil war, honorably discharged from service, who shall have been employed for a continuous period of ten years or more in the *civil service* of the state of New York, and who shall have reached the age of seventy years, upon his own request, or if employed in manual labor, upon becoming incapacitated for performing manual labor, shall be retired from his employment by the state of New York, and thereafter and during his life, the state department or institution which employed him at the time of his retirement, shall pay to him, in the same manner that the salary or wages of his former position were customarily paid to him, an annual sum equal in amount to one-half the salary or wages paid to him in the last year of his employment; provided, however, that the amount so to be paid to such retired veteran shall not exceed the sum of one thousand dollars per annum.

It will be noted that the amount of the pension to be paid in any case shall not exceed the sum of one thousand dollars.

Chapter 751 of the Laws of 1920 amended such section by omitting the words, "provided, however, that the amount so to be paid to such retired veteran shall not exceed the sum of one thousand dollars per annum." This resulted in the removal of the maximum amount which might be paid to any retired veteran under this section. Chapter 54 of the Laws of 1921 further amended such section by adding, "The state department or institution which employed a soldier, sailor or marine, who shall have been retired from said employment under the provisions of this section prior to May twelfth, nineteen hundred and twenty, shall pay to him in the manner above specified, during his life, an annual sum, from and after said twelfth day of May, nineteen hundred and twenty, equal in amount to one-half the salary or wages paid to him in the last year of his employment."

---

* See also Opinion relative to Retirement Pensions under § 19a of the Military Law, below, page 258.

Specifically answering your questions:

As to 1. I am of the opinion that chapter 54 of the Laws of 1921 is retroactive with respect to employees of your department retired under section 21-a of the Civil Service Law prior to May 12, 1920, and they are entitled to an increase in pension as provided for under chapter 54 dating back to May 12, 1920.

As to 2. I am of the opinion that chapter 54 of the Laws of 1921 is retroactive with respect to employees of your department retired under section 21-a of the Civil Service Law, subsequent to May 12, 1920, and they are entitled to an increase in their pension as provided for in said chapter 54 dating back only to the time of their retirement.

As to 3. In computing the amount of pension granted under section 21-a of the Civil Service Law, maintenance allowed to the retired officers or employees during the last year of such employment should be taken into consideration in determining the salary paid. (See Opinion of Attorney-General, 1916, page 281.)

In arriving at the amount to be allowed for maintenance, you should be guided by schedule rate allowed as and for commutation in lieu of maintenance in your department. You would not be controlled by the rules fixed by the Comptroller under the employee's retirement system.

June 23, 1921.

CHARLES D. NEWTON,
Attorney-General.

To FRANK R. UTTER, *State Fiscal Supervisor.*

(b) Ten Years Continuous Service is Prerequisite to Retirement of Civil War Veteran under Seventy-five (§ 21-a).

Request is made for an interpretation of chapter 768 of the Laws of 1917, with reference to your right to be retired on a pension under said Act.

Chapter 768 of the Laws of 1917, which amended section 21-a of the Civil Service Law, is as follows:

> § 21-*a*. *Retiring Veterans of The Late Civil War and Granting Them Pensions.* Every soldier, sailor or marine of the army or navy of the United States in the late civil war honorably discharged from service *who shall have been employed for a continuous period of ten years or more* in the civil service of the State of New York and the several cities and counties thereof and who shall have reached the age of seventy years upon his own request, or if employed in manual labor upon being incapacitated for performing manual labor, shall be retired from his employment by the State of New York and the several cities and counties thereof, and thereafter and during his life the State department or institution and the several cities and counties which employed him at the time of his retirement shall pay to him in the same manner that the salary or wages of his former position were customarily paid to him *an annual sum equal in amount to one-half the salary or wages paid to him in the last year of his employment; provided, however, that the amount so to be paid to such retired veteran shall not exceed the sum of one thousand dollars per annum.*
>
> Section 2. This act shall take effect immediately.

Chapter 54 of the Laws of 1921 further amended said section among other ways by omitting the words "provided, however, that the amount so to be paid to such retired veteran shall not exceed the sum of one thousand dollars per annum." This resulted in the elimination of the maximum amount which might be paid to any veteran retired under this section as amended.

The particular feature of this article of the Civil Service Law, about which you are concerned is the requirement of *employment for a continuous period of ten years or more in the civil service* of the State of New York, and of the several cities and counties thereof.

I am of the opinion that in order to entitle you to be retired under section 21-a of the Civil Service Law, as amended, you must have been employed for a *continuous period of at least ten years* in the civil service of the State of New York or some city or county thereof.

This continuous service of at least ten years is an absolutely necessary condition precedent to your right to retirement, and until you complete such ten years of continuous service, you could not legally be retired.

In your letter you state that you entered upon your present position on September 1, 1912. Were you immediately preceding this appointment in the civil service of the State or of any city or county? If you were in such service and there was no interruption between that service and your service in your present position, a different conclusion might be reached.

December 8, 1921.

CHARLES D. NEWTON,
Attorney-General.

To JOHN H. FOREY, *Syracuse, N. Y.*

(c) No Fixed Period of Service is Prerequisite to Retirement of Civil War Veteran over Seventy-five; Entry upon Service (§ 21-b).*

September 28, 1921.

HON. JAMES A. WENDELL, *State Comptroller, Albany, N. Y.*

DEAR SIR.— I acknowledge receipt of your letter dated September 9th but received at this office September 19th asking for an opinion with relation to § 21-b of the Civil Service Law as added by chapter 159 of the Laws of 1921.

You state the following facts and ask the following questions:

" The case in point is a veteran, 82 years old and has been employed by the state but 5 years. He was, therefore, over 75 years when appointed. Will you kindly give this Department your opinion as follows:

1st. Is the applicant for retirement entitled to the benefits of this Act if he has not been employed for 10 years by the State?

2nd. If he is entitled to retirement on employment of less than 10 years, how short a term of employment will entitle him to retirement?

3rd. As the Act makes an employee eligible to retirement after he has reached the age of 75 years, does the fact that he entered the employ of the State after the age of 75 have any bearing on the question? "

Section 21-b reads as follows:

> § 21-b. Retiring veterans of the late civil war and granting them pensions. Every soldier, sailor or marine of the army or navy of the United States in the late civil war honorably discharged from service seventy-five years of age or older employed by the state of New York shall, upon becoming incapacitated by accident, illness or age for performing the duties assigned to him, be retired from such employment by the state of New York and thereafter and during his life said department in which he was employed shall pay to him in the same manner that the salary or wages of his former position were customarily paid to him an annual sum equal in amount to one-half the salary or wages paid to him in the last year of his employment; provided, however, that the amount so to be paid to such retired veteran shall not exceed the sum of one thousand dollars per annum, unless such retired veteran shall have been employed by the state for a period of at least ten years before his retirement and is retired pursuant to the provisions of section twenty-one-a of this chapter.

You also call my attention to § 21-a of the Civil Service Law which has been amended by chapter 54 of the Laws of 1921. That section refers to Civil War veterans in State or municipal service for a continuous period of ten years or more who shall have reached the age of 70 years. Section

---

* This § 21-b, added by L. 1921, ch. 159, should be distinguished from the section with the same number added by L. 1921, ch. 702, and subject of the two opinions immediately following.

21-b refers to Civil War veterans 75 years of age or older, in the State service. These sections do not seem to be in conflict with each other.

In answer to your questions I would say it is my opinion that the veteran in question may be retired if incapacitated by accident, illness or age for performing the duties assigned to him even though he was over 75 years of age when appointed and that his employment has been for but five years. Chapter 159 fixes no minimum term of employment and I am not prepared to state how short a term of employment would entitle such a person to retirement. Apparently a very short term of employment would be sufficient provided it were not a subterfuge for the purpose of taking advantage of the act. The pension to the veteran in question cannot exceed the sum of $1,000 per year for the reason that he has neither been employed by the State for a period of ten years nor is he retired under the provisions of § 21-a.

The intent of § 21-b, broadly speaking, seems to be when read in connection with § 21-a that all Civil War veterans shall be retired upon a pension when incapacitated, regardless of length of service or time of entry therein.

Very truly yours,

CHARLES D. NEWTON,
Attorney-General.

(d) World War Veterans Must Have Served Prior to November 11, 1918; When Preference and Service Credit Effective (§ 21-b).*

The period of "actual warfare" in the World War ceased on November 11, 1918.

Subdivision (d) of § 21-b of the Civil Service Law provides that a veteran shall be preferred in original appointment over other persons standing on the list with equal rating. This carries with it a preference over those having lower ratings.

The provisions of subdivisions (c) and (d) of § 21-b of the Civil Service Law apply to appointments made after May 13, 1921, regardless of when examinations were held or lists established, but the provisions of subdivision (e) only apply to examinations held after May 13, 1921.

INQUIRY.

Section 21-b was added to the Civil Service Law by chapter 702 of the Laws of 1921, in effect May 13, 1921. The Civil Service Commission requests advice upon the following points:

1. Time of termination of period of actual warfare in the World War. Can this time be fixed as November 11, 1918, or is the period still open?

2. In subdivision (d) it is provided that a veteran shall be preferred in original appointment over other persons eligible for such appointment and standing on the list therefor with a rating equal to that of such veteran. Is this language to be interpreted as applying only to candidates whose general average is exactly the same, or does it mean that the veteran preferred over all other candidates with a rating equal to or lower than that of the veteran?

3. Do the provisions of the law apply to examinations held and lists established prior to May 13, 1921?

4. Do the provisions of the law apply to examinations held prior to May 13, 1921, the lists resulting from which have not as yet been established?

OPINION.

1. Section 21-b of the Civil Service Law as added by chapter 702 of the Laws of 1921, in defining "veteran" for the purposes of the section, provides:

---

* This § 21-b added by L. 1921, ch. 702, should be distinguished from the section with the same number added by L. 1921, ch. 159, and subject of the opinion immediately above. This opinion should be read in connection with the later opinion following.

> (a) The word "veteran," when used in this section, shall mean and include any person, male or female, who, being a resident of this State at the time of induction into the service, served in the army, navy or marine corps of the United States within the period of actual warfare in time of war, or who, being a resident of this State and a citizen of the United States at the time of induction into such service, served within the period of actual warfare in the world war in the military or naval service of any nation associated with the United States in such war and has received an honorable discharge or relief from such service; but shall not include any person who refused so to serve after a final decision of the proper military authorities requiring such service.

We have had many statutes referring to the World War and to the termination of the war, and under them it has generally been held that the war did not terminate with the signing of the armistice, since a technical state of war still existed between the United States and Germany and American troops remained in France and Germany thereafter. But in this statute we find a new phrase: "Within the period of actual warfare." This is clearly intended to mean something different from the phrases used in other statutes. It was clearly the intention of the Legislature to exclude from the benefits persons who joined the United States Army say in January, 1921, while a technical state of war still existed between this country and Germany. A similar restriction is found in the Soldiers' Bonus Law (Laws 1920, chapter 872). These bonuses are provided for persons who served in the military or naval service of the United States at any time between April 6, 1917, and November 11, 1918. I believe that that is the period the Legislature had in mind when it said "the period of actual warfare" in the World War.

It is to be noted that the privileges extend to veterans of the World War who fought under the flags of the nations who were associated with the United States as well as those who fought under the American flag.

As to other wars, only those who served in the army, navy or marine corps of the United States within the period of actual warfare in time of war, are entitled to be considered as "veterans" within the meaning of this section.

In every case the veteran must, of course, possess all the other qualifications stipulated in the statute.

2. Subdivision (d) of the section provides in part:

> (d) Every veteran shall be entitled to preference in original appointment to all competitive positions in the civil service of the State and the civil divisions thereof over all other persons eligible for such appointment and standing on the list therefor with a rating equal to that of such veteran.

In my opinion the Legislature undoubtedly intended to grant a preference by this language over all other persons who do not stand higher upon the list. It is extremely rare that two candidates receive exactly the same rating on a civil service competitive list, and the grant of a preference over those holding exactly the same rating, without including in it a preference over those rated lower, would avail the veteran nothing. For example: If A, a veteran, and B, a non-veteran, had ratings exactly alike, say 81, and C, also a non-veteran, had a rating of 80 and the Civil Service Commission certified to the appointing officer the names of A, B and C, it would be obviously absurd to say that the appointing officer cannot choose B because A has a preference over him, but can choose C because A has no preference over him. If A is entitled to a preference over B, he surely ought to be entitled to a preference over C.

3–4. Subdivisions (c) and (d) of the section provide that veterans shall be entitled to specified preferences in appointment to certain civil service positions over other persons standing on the lists. There is nothing to indicate that the section is not intended to apply to existing lists and the act, by its terms, is to take effect immediately. I am, therefore, of the opinion that the rules with respect to preference should be applied to appointments from lists existing at the time of the passage of the act, and also to lists made up after the passage of the act as the result of examinations held theretofore.

Subdivision (e) of the section provides that in all examinations for original appointment certain credit shall be given. There is nothing in the statute to indicate any intention to have it retroactive in any respect, and it is a well accepted rule of statutory construction that statutes will not be deemed retroactive in the absence of an unmistakable legislative intent to that effect. I am, therefore, of the opinion that, with respect to examinations held before the passage of this act, the Civil Service Commission is under no obligation to give the credits provided for in subdivision (e) of the section, whether or not the ratings had been made before the passage of the act.

My opinion has not been requested with respect to the constitutionality of any part of this statute, and I have considered no constitutional questions in arriving at the conclusions above stated.

Dated *May* 18, 1921.

CHARLES D. NEWTON,
Attorney-General.

To the State Civil Service Commission, *Capitol, Albany, N. Y.*

(e) Preference of Disabled Veterans is Unconstitutional; Preference in Certification Only; Service Credit (§ 21-b).*

INQUIRY

To what extent is section 21-b of the Civil Service Law, added by chapter 702 of the Laws of 1921, in conflict with the Constitution, and to what extent is it operative?

OPINION

On May 18, 1921, I rendered an opinion, at the request of the Civil Service Commission, upon the construction of section 21-b of the Civil Service Law as added by chapter 702 of the Laws of 1921. I closed that opinion with the words: "My opinion has not been requested with respect to the constitutionality of any part of this statute, and I have considered no constitutional questions in arriving at the conclusions above stated."

On July 13, 1921, the Court of Appeals decided the case entitled "*Matter of Barthelmess et al.* v. *Cukor et al.*" The opinion in that case, *per* Judge Cardozo, contains an elaborate exposition of the purpose and effect of section 9 of Article V of the Constitution of New York, which provides:

> Civil service appointments and promotions.— Section 9. Appointments and promotions in the civil service of the State and of all the civil divisions thereof, including cities and villages, shall be made according to merit and fitness to be ascertained, so far as practicable, by examinations, which, so far as practicable, shall be competitive; provided, however, that honorably discharged soldiers and sailors from the army and navy of the United States in the late Civil War, who are citizens and residents of this State, shall be entitled to preference in appointment and promotion, without regard to their standing on any list from which such appointment or promotion may be made. Laws shall be made to provide for the enforcement of this section.

The court held that the statute then under consideration (Military Law, sections 245, paragraph 7, as amended by L. 1920, ch. 282), violated the constitutional provision in attempting to grant a preference in promotions in the civil service to a class, other than veterans of the Civil War, which preference was not based upon merit and fitness determined by competitive examination, in cases in which competitive examination was practicable.

---

* This opinion may be read in connection with the earlier opinion preceding.

The opinion settles, beyond any possibility of argument, that service in the armed forces of the United States, other than service in the Civil War, cannot, of *itself*, be made the ground for preference in appointment or promotion in the civil service of the State, its subdivisions or municipalities, where it is practicable to test merit and fitness by examination.

The opinion in the Barthelmess case absolutely controls us in considering the effect of section 21-b of the Civil Service Law as added by L. 1921, ch. 702. This statute is divided into four paragraphs:

Paragraph "a" defines the word "veteran" as including those residents of New York who served in specified manner in the forces of the United States in time of war, or who served in specified manner with a nation associated with the United States in the World War.

Paragraph "b" defines a "*disabled veteran*" as a veteran found (by the department of health) to have been disabled in one of divers enumerated respects.

(1) Paragraph "c" provides:

> (c) Every disabled veteran shall be entitled to preference in original appointment without regard to his standing on any list from which such appointment may be made, to all competitive positions in the civil service of the State and the civil divisions thereof, provided his qualifications and fitness shall have been ascertained as provided in this chapter and the rules and regulations made in pursuance thereof; and a person so preferred shall not be disqualified from holding any position in such service on account of his age or disability, provided such age or disability does not render him incompetent to perform the duties of the position.

This provision might well have been the subject of the following language in the opinion of the Court of Appeals referred to:

> This statute is not an estimate of capacity. It is the expression of a preference. The Legislature has not said that the test of competitive examination is impracticable, no matter what the position, whenever soldiers or sailors are among the candidates for promotion. It has said, in effect, that even though the test of competitive examination be practicable, soldiers and sailors shall be eligible in advance of others. The statute was so construed at the Appellate Division, and its entire scheme and framework exclude another meaning. Mere entrance into army or navy, and that whether voluntary or involuntary, is made sufficient for preferment. Neither the kind nor the quality or the duration of the service is important. There is not even the requirement of an honorable discharge. Service for a month or a day as cook or as hostler counts as much as service throughout the war, and the winning of a cross of honor. The preference is not confined to callings or positions where efficiency might be thought to be promoted by the discipline of camp or ship. The clerk or the bookkeeper is subjected to the same tests as the policeman or fireman.

The court held that the statute violated the constitutional provision. And it is obvious that the act now under consideration is equally invalid.

The mere fact that the preferences in paragraph "c" are limited to "disabled" veterans, does not cure it. Mere physical disability, even though incurred in the line of military duty, does not increase a man's merit or fitness for civil office. If anything, its tendency would be the opposite. And the preference is not even limited to those suffering from "honorable scars." It applies equally to those suffering from disgraceful diseases which could not have been contracted in the line of duty.

The court said:

> The discipline of army or navy, to justify this exaltation of its significance, must bear something more than a remote or fanciful relation to the duties of office or employment.

The same is equally true of a disability incurred during military service. The loss of a leg does not necessarily make a man a worse clerk or stenographer than the next one, but it certainly does not, of itself, make him a better one.

As the court said of the other statute:

> The condemnation of the act is written in the Constitution in words too plain to be misread.

I conclude that paragraph "c" of the statute is unconstitutional in its entirety, for the last part of it, prohibiting disqualification, only applies to persons "so *preferred.*"

(2) Paragraph "d" of the section under consideration provides:

> Every veteran shall be entitled to preference in original appointment to all competitive positions in the civil service of the State and the civil divisions thereof over all other persons eligible for such appointment and standing on the list therefor with a rating equal to that of such veteran.

No attempt is made here to prefer "veterans" in appointment over those standing higher upon the list, so it cannot be said that the "merit and fitness" rule of the Constitution is violated. In my opinion of May 18th, I held that preference over those standing with equal rating on the list carried with it a preference over those with lower rating. And the effect of this would be that if a veteran's name were first among three, certified by the civil service commission as eligible for appointment, he must be chosen by the appointing officer. As I have noted above, in preparing that opinion I considered merely the interpretation of the statute, as it stood, without reference to the Constitution. But now I am asked for advice upon the constitutionality of the act, and must go farther. Another section of the Constitution intervenes. The Court of Appeals mentions it in the Barthelmess case, saying:

> Nothing in *People ex rel. Balcom* v. *Mosher*, 163 N. Y., 32, is authority for these bizarre conclusions. We construed the civil service section of the Constitution in the light of another section (Art. 10, sec. 2) which says that local officers shall be chosen by the local authorities. We said that this implied some privilege of selection on the part of the public officer who was to exercise the appointing power. The Legislature might require him to make a choice among the three highest on the list, but could not exclude judgment altogether by restricting him to the one that was highest of the three.

Paragraph "d," interpreted according to my former opinion, would have the effect of restricting the power of appointment in violation of article X, section 2, of the Constitution. That section applies only to appointments in counties, towns, villages, and cities. The rule does not necessarily apply to the State service. But the paragraph of the statute was obviously intended to apply equally to the State and to its civil divisions. I cannot believe that the Legislature intended one rule for the State government, and another for the counties and villages — the law controlling which is administered by the same State Civil Service Commission — or for the cities, even though they have separate municipal commissions. After the Court of Appeals, in the Balcom case, held a section of the Civil Service Law void as against cities, the Legislature proceeded to repeal it in its entirety. It was not left upon the books to tie the hands of State officers in a manner in which those of local officers could not be tied. Here, too, I believe the Legislature intended the same rule for all, and the paragraph should be held to mean the same for the State as for the localities.

There is a possible construction of paragraph "d," which is not in conflict with the Constitution. It is our duty, under the well established rules of statutory interpretation, to adopt this construction. The statute grants to the veteran a preference "over all other persons eligible for such appointment and standing on the list thereof with a rating equal to that of such veteran." It occasionally happens that two candidates receive exactly equal civil service ratings. The Civil Service Rules provide (XI, 2):

> When two or more eligibles on a register have the same average percentage, preference in certification shall be determined by the order in which their applications were filed * * *.

This is a rule of convenience, some rule being necessary in the circumstances. Subdivision "d" of section 21-b, if interpreted as merely a substitute for this rule, in cases where veterans are involved, is reasonable and violative of no constitutional provision. Therefore, under the rules of construction, this interpretation should be adopted.

Although the statute speaks of *appointment* rather than *certification*, that was also true of the statute denounced in the *Barthelmess* case, but the court said:

> It is not addressed exclusively to the power that appoints. It is addressed to the power that certifies the names of those eligible for appointment. * * *. It circumscribes the list of those whom the examining officers are to return * * * as eligible * * *.

In my opinion the first sentence of paragraph "d" of the section must be construed to mean merely that "veterans" take precedence (over those "having the same average percentage") in position upon the list from which certifications are made. And it only applies to *original appointment* lists, not to promotion lists.

(3) The second sentence of paragraph "d" provides:

> Every veteran shall be entitled to preference in appointment to all positions classified in the labor class in cities without regard to their standing on any such list, provided, however, that disabled veterans shall be preferred over all others on such list.

The Legislature, many years ago, determined that merit and fitness for unskilled and certain skilled labor positions could not be determined by examination. (Civil Service Law, section 13, paragraph 4, section 18.) In the State service, no preference among laborers, except to Civil War veterans, was ever allowed. In cities preference was given in chronological order of application. The new provision supersedes the rule of section 18, with respect to the labor class in cities. "Veterans" are preferred above others, and "disabled veterans" above other veterans. This does not violate section 9 of article V of the Constitution, for that provision has no application where, as here, examination is not practicable as a means of determining merit and fitness. But in view of section 2 of article X, we must hold that this preference only extends to certification from the list, and not to choice by appointing officer among those certified.

(4) Paragraph "e" of section 21-b provides:

> In all examinations for original appointment to any competitive position in the State service or in the civil divisions thereof, veterans shall receive additional credits for personal merit, as shown by military training and experience. The civil service commission, by proper rule or regulation, shall fix the comparative ratings to be given to veterans. The weight to be given to personal merit in no case shall exceed twenty per centum of the total weights of the examination.

In construing this paragraph, another excerpt from the opinion of Judge Cardozo is in point. He says:

> It [the Legislature] may say that military or naval service (whether in the Civil War or elsewhere) is something to be counted by the examiners, like experience in other fields, *whenever service or experience qualifies for office or employment.* [Italics mine.] Service so considered does not override the results of competitive examination; but enters into the results as a contributory factor. A different situation arises when service controls selection irrespective of qualifying value.

> It is the difference between an appraisal of merit, an estimate of fitness, and a preference or bonus. The Constitution circumscribes the field of privileges and favor.

It follows that the act under consideration here is valid in so far as it provides for additional credits in ratings *for positions in which military service or experience* is a proper factor in determining merit and fitness. Further than this it cannot go. It is obvious that a certain kind of military experience is valuable to a candidate for the position of policeman, fireman or even foreman of labor. Another kind of military experience, *e. g.*, that obtained in an engineering regiment, would be valuable to a candidate for the position of engineer in a highway department. And experience as field clerk in the army or paymaster in the navy would undoubtedly increase the fitness of a candidate for a clerical position. But the statute cannot be held to make it incumbent upon the civil service commissions to give the same credits to all kinds of soldiers and sailors who are candidates for any of "the myriad offices and employments in the civil service." It is left to the commissions to determine the weight to be given to each kind of experience, in each kind of examination, with the sole limitation that in no case shall it exceed twenty per cent of the total weights of the examination.

Albany, *July* 26, 1921.

CHARLES D. NEWTON,
Attorney-General.

TO THE STATE CIVIL SERVICE COMMISSION.

C. STATUS OF SUSPENDED LIST

(a) Reinstatements, Promotions and Transfers May Be Made Without Regard to Suspended List; Appointment for Month; Certification; Standing (§ 22-a).

INQUIRY

1. Does the provision of civil service rule VIII, subdivision 6, allowing appointment for one month regardless of standing on a list, apply to suspended list?
2. Can reinstatements of persons who resigned within a year be made under civil service rule XVI, subdivision 1, without regard to list of suspended employees?
3. Can promotions be accepted from promotion lists when there is a suspended list for the same title and salary grade of position?
4. When the suspended list is reduced to one or two names, (a) is appointing officer obliged to select therefrom, or (b) should the Civil Service Commission certify the name or names remaining on the suspended list with the addition of necessary number of names from the regular eligible list to make a complete certification of three names?
5. Can persons whose names appear on suspended list be reappointed under civil service rule XVI, subdivision 1, regardless of their standing on the list?
6. Can transfers which meet the conditions of the transfer rule be allowed regardless of suspended lists?

OPINION

After the consolidation of the Civil Service Law of 1899 and the adoption of rules thereunder, the practice under the statute and rules became pretty definitely established, and for a long period there were few changes in the statute or the rules. In 1901 the provisions for graded service were created in a separate act, which was consolidated with the Civil Service Law in the consolidation of 1909. From then until 1917 there were very few changes in statute or rules, and a very definite policy with respect to appointments, promotions, transfers and reinstatements became generally understood, rarely questioned, and never or practically never departed from.

This policy embodied several principles, such as:

(1) Appointments from open competitive lists would not be permitted where promotion within the department was practicable, but vacancies in higher positions would be filled by promotions leaving lower vacancies to be filled by appointment from original lists (cf. C. S. L., § 16, Rule XIV, 1).

(2) Transfers could always be made, even though there were lists from which original appointments might be made (Rule XV). Similarly, persons separated from the service through no fault of their own could be reinstated (within a year) in their old departments or appointed to positions in other departments, to which they had been eligible for transfer, without certification and regardless of the existence of open competitive lists for original appointment (Rule XVI, 1).

(3) Promotions were preferred over transfers (Rule XV, 6), though not over reinstatements. Promotions were also preferred over appointments (in different departments) of persons eligible under Rule XVI, 1, for their eligibility for such appointment was conditioned on eligibility for transfer under Rule XV.

The names of persons covered by Rule XVI, 1, did not, properly speaking, go upon a list. That is, they were not placed in any definite order upon a list, and although the names were necessarily compiled so that eligibility could easily be checked up, the Civil Service Commission did not certify groups of names from the compilation.

In 1914, 1915 and 1916, subdivision 2 of Rule XVI was changed a number of times, the Commission experimenting with various theories for a definite regulation of rights of persons whose positions were abolished. The theory was settled by the Commission in 1916 when that subdivision took its present form, providing for a "suspended list" of persons whose positions were abolished, from which certification should be made (a) to fill vacancies in any department — Civil War Veterans only, and (b) to fill vacancies in the department from which employees had been dropped — certification in order of original appointment to the abolished positions.

Persons whose positions were abolished went upon the "suspended list" and they became *entitled to reinstatement* if their *same* positions were re-established within a year and *entitled to certification* (to a narrowly limited class of position) in preference to those upon open competitive lists. Persons who were separated from the service by resignation, suspension, leave of absence, removal without fault, etc., did not go upon the suspended list but upon the compilation mentioned above. And they were not *entitled to certification*, but were *eligible for reinstatement*, and *eligible for appointment* in other departments (subject to the preference granted to promotions).

The difference between the right to certification in preference to open lists and eligibility for reinstatement or reappointment, should be borne in mind. For neither had preference over the other. The head of a department who had a vacancy to fill (which could not properly be filled by promotion might fill it in one of three ways:

(1) By appointment from the "suspended list" for his own department, or in the absence of such a list, from an open list.

(2) By transfer.

(3) By appointment under Rule XVI, 1. If the position were a re-establishment of position theretofore abolished, persons on the "suspended list" were preferred for re-appointment, but otherwise there was no preference. The head of the department might take his choice of transfer, appointment under Rule XVI, 1, or appointment from a certification (under Rule XVI, 2, first, then from an open list).

In 1919 and 1920 the Legislature added sections to the Civil Service Law. The result of these amendments is the subject of the present inquiry.

By chapter 251 of the Laws of 1919, section 31 was added to the law. This provided that where an employee was *separated from the service* through the abolition of a department, office or institution, or a section, bureau or division thereof, his name should be placed upon a "preferred list." This covered part of the ground covered by Rule XVI, 2, but not all, for it did not apply to individual positions abolished in a department or bureau which was continued. It created "a preferred list for the office, or position, in which he has been employed, or for *any corresponding position in the same group and grade.*" Rule XVI, 2, provided for certification (except Civil War Veterans) only to the department from which persons had been dropped. Whether section 31 intended certification to be made to other departments is doubtful. If the department were abolished, certification could not well be made to *it.* But on the other hand, section 31 provides only for certification for *reinstatement* — and appointment in another department had never been regarded as a *reinstatement* — it was either an appointment or a transfer. This would seem to indicate that only certification to the same department was contemplated. And from such a viewpoint the section seems superfluous, for it did not modify Rule XVI, 2, but merely paralleled it *in part.* To my mind the only purpose it could serve was to make it impossible for the Civil Service Commission, by amending its rules, to modify Rule XVI, 2, so far as that applied to positions abolished as a part of the discontinuance of a department or bureau, and to modify section 22, as hereinafter shown.

It should be noted that the Civil Service Commission always regarded a person as *separated from the service,* if his position were abolished, as much as when he resigned, was removed, or extended his leave of absence without pay for more than a prescribed time. It also regarded a *suspended* person as separated from the service. To be sure, section 22 always provided that a veteran, whose position was abolished, should not be separated from the service, but should be transferred to another position if one were vacant which he was fitted to fill. But if he could not be transferred, for lack of a vacancy, he necessarily became separated from the service — and section 22 never provided a preferred list for him. In the five counties in New York City, as in the government of the city itself (under the charter) persons holding competitive positions, whose positions were abolished, went upon a "list of suspended employees" for certification in preference to any other list — but nothing is said to the effect that such persons should not be *separated from the service.* They were regarded as separated, but eligible for re-employment.

The "list of suspended employees" was preferred in certification over open competitive lists, but transfers, and appointments under Rule XVI, 1, could always be made even where such list existed.

Rule XVI, 2, could not, of course, supersede the mandate of section 22, so. after its adoption there were three kinds of lists from which appointments could be made, with preference as follows:

(1) Under section 22.
(2) The list under Rule XVI, 2.
(3) Open competitive lists.

And transfers or appointments could always be made, in spite of the existence of any or all of such lists.

Further, *promotions could always be made,* and were in fact *preferred,* in spite of the existence of such lists.

The passage of section 31, in 1919, added one more list from which certifications should be made in preference to all other lists. And still promotions were preferred, and transfers, or appointments under Rule XVI, 2, were possible, in spite of the existence of the other lists (now four).

That is, although there were now four classes of lists from which *certification* could be made for *appointment,* the head of a department (except in reinstatement in the same position, or one identical with it) could fill a vacancy by *promotion* if possible, otherwise by *transfer* or *appointment under Rule XVI, 1,* without calling for certification from any one of them.

Of course, Civil War Veterans always had their constitutional preference, which was not superseded by any statutory amendment or change in the rules.

In 1920 the Legislature added a second "Section 22-a" to the Civil Service Law (one had been added in 1918) by chapter 836 of the laws of that year. This is the section with the interpretation of which we are immediately concerned. It seems to be in complete conflict with section 31, and Rule XVI, 2, except where it merely reiterates their provisions, and it provides for a new list which takes the place of the lists under them.

Section 22-a begins by providing that when any position in the competitive class or qualified grades is abolished, the incumbent shall be deemed *suspended* without pay. This brings such persons into the provisions of subdivision 1 of Rule XVI, which covers persons who are *suspended*. It next provides that the order of suspension shall be in inverse order of original appointment — this provision was the subject of a lengthy opinion from this department in July, 1920 (*Rep. Atty.-Gen.*, 1920, p. 137), and needs no comment here. It goes on to provide that the person suspended shall be *entitled* to *reinstatement*, in order of original appointment in that or a corresponding or similar position if there is need for his service within two years. That means the same position in the same department, or one just like it in the same department, or one created under a different title but for the same purpose in the same department. It cannot refer to a *different* position in the same department or to a similar position in a different department, for in such a case the vacancy would be filled, not by *reinstatement* but by *transfer* or *appointment*. Also, if a different position in the same department or a position in another department were intended, the rest of the section would be superfluous.

The section goes on to provide for a "list of suspended employees" from which *certification* must be made before certification from any other list. There is a preference for *reinstatement* and a preference for *certification*. But there is no preference for *appointment* to a different position, no preference over Rule XVI, 1, no preference over transfer. If opportunity occurs for *reinstatement* (*i. e.*, to the same or corresponding position in the same department) *one* upon the list is *entitled* to be reinstated. The head of the department has no choice. He must take the man at the top of the list. But if a vacancy occurs to which *reinstatement* cannot be made, the head of the department can still fill it by transfer, by appointment under Rule XVI, 1, or by taking a name from a *certified* list. He is not restricted. He can take anybody eligible for transfer (with the consent of the head of the department from which transfer is made, and of the Civil Service Commission). He can take anybody eligible under Rule XVI, 1. Or he can ask for a certification, getting three names. If he asks for a certification he will get names from the list under section 22-a if there be such a list. If there be no such list he will get names from the list under the latter part of section 22, if any. Otherwise he will get names from an open competitive list. The lists under section 31 and Rule XVI, 2, disappear, for all those names are of necessity upon the list under section 22-a.

But the question of promotion comes in. Could the head of the department ask for a promotion list? Or does the provision "before making certification from any other list" in section 22-a give a preference to that list over promotion lists? I think not, for the following reasons:

The Civil Service Law, as it stands, mentions lists, and certification from lists, but it does not mention promotion lists nor certification for promotion. When section 22-a was added, creating a list which should have preference over other lists, it naturally means the other lists mentioned in the statute itself. It means the open competitive lists mentioned in sections 14 and 15, the "list of suspended employees" mentioned in section 22, the "preferred list" mentioned in section 31. But it is a primary rule of statutory construction that where different parts of the same statute, or different statutes, seem to be in conflict and it is not *clear* that the later enactment was intended to repeal the former, they will be interpreted so as to give effect to both, as far as possible. Repeals by implication are only considered to exist where the intent is unmistakable. And we have section 16 of the law providing "Vacancies in positions in the competitive class shall be filled, so far as practicable, *by promotion* * * *".

With promotion always preferred over transfer or appointment under Rule XVI, 1, it would be absurd to say that the head of a department might fill a vacancy by one of those methods, without calling for certification under section 22-a, but could not make a promotion.

Also, under section 16 an increase of salary beyond a grade, without change of duties, is a promotion, to be made, under Rule XIV after examination where more than three are eligible. This kind of promotion does not fill any vacancy in position, but only a vacancy in part of a one-salary appropriation.

If we were to rule otherwise where would it lead us? The stenographers in the Attorney-General's office are specialized in legal work. A vacancy in an $1,800 position occurs. There are stenographers at $1,500, eligible for promotion, and others down to $900. A stenographer who had drawn $1,800 in the Highway Department could not be transferred to the position. The statute prohibits it, and she would not be as well fitted for the position as one of our own $900 girls, nor any better than a $1,200 girl on an open list. If I had to appoint her in preference to making a promotion, I would be wasting the State's money if I gave her more than $900 or $1,200. And the $1,500 girls would lose the rare opportunity to get ahead — a bad thing for their morale, which rests largely on ambition. It would be a direct defiance to the promotion principle.

Or suppose I have one clerk in the $1,800 grade and because of his value, and fear that he will find a better position elsewhere, I succeed in getting an appropriation of $2,100 for him from the Legislature. Could it be that the Legislature, which appropriated the money for him, intended that he could not get it so long as there was a $2,100 clerk on the suspended list, dropped from the Health Department? Or that I was expected to drop him and appoint the Health Department man in his place?

The Legislature will not be presumed to have intended an absurdity.

I conclude that the preference over other lists in section 22-a is a preference over the other *statutory* lists, the "open competitive," "suspended employee," and "preferred" lists mentioned above, but not over promotion lists, nor over promotions made without certification, where permitted by the rules.

The purpose of section 22-a was to enlarge, not to restrict, the rights of persons who were separated from the service by the abolition of their positions. Therefore I cannot believe that it was intended to put them in a worse position than those separated from the service, equally without fault, but by their own voluntary acts. I cannot believe that it was intended to exclude them from the rights accorded to persons who resigned. The section specifically says they shall be deemed *suspended*. It says that first. And they should have all the rights accorded by Rule XVI, 1, to suspended persons, equally with those who resign or procure leave of absence. As pointed out above, the preference in order of original appointment runs only to *reinstatement* and to *certification in groups*. Where there is no reinstatement and no certification, I consider these persons *suspended*, and eligible equally with other suspended persons, to appointment under Rule XVI, 1.

When the head of a department calls for a certification of names, from preferred or open competitive lists, which he only does when he need not make a promotion and does not wish to make a transfer or an appointment under Rule XVI, 1, he is entitled to a choice. With the exception of the short time when the statute contained the provision held unconstitutional in *People ex rel. Balcom* v. *Mosher*, 163 N. Y. 32, appointing officers have always been given a choice of three names, with two exceptions. One is in case there is a Civil War Veteran on the list, and the other is in case of *reinstatement* under section 22-a (or formerly under Rule XVI, 2). In providing for certification from open lists, it has always been the rule that if there were less than three names on a list, the appointing officer was entitled to a new list. There is nothing in section 22-a to indicate an intent to depart from this rule. "Certification" is used therein in the usual sense. And I consider the appointing officer still entitled to three names. If the suspended list contains but two names, one should be added from the next best list (that under section 22 or an open list) and if there be no next best list, then one should be prepared, just as if it had been a competitive list which contained but two names.

I think the suspended list should be regarded as in effect the top part of a list containing, (1) the list under section 22-a, (2) the list under section 22 and (3) the open competitive list. This for the purpose of certification, and equally for the purpose of temporary appointments under Rule VIII, 6. Such temporary appointments should be possible regardless of position on the total list.

Section 22-a contains a saving clause for veterans covered by section 22. They get the benefits of section 22-a, but are not prejudiced by it. So, if a veteran's position be abolished, he is still *entitled* to transfer, if he can find a vacant position at the same salary, which he is fitted to fill. And the appointing officer has no choice in that case. He cannot fill the vacancy by transfer, appointment under Rule XVI, 1, or by taking a name from a certified list. He must take the veteran. If there be several eligible veterans there is no preference among them, and the appointing officer may take his choice.

By way of recapitulation I will answer the questions submitted, as follows:

1. Does the provision of civil service Rule VIII, subdivision 6, allowing appointment for one month regardless of standing on a list, apply to suspended lists?

Answer: The suspended list should be regarded as the first part of a grand list, from which any name may be taken for temporary appointment.

2. Can reinstatements of persons who resigned within a year be made under civil service Rule XVI, subdivision 1, without regard to list of suspended employees?

Answer: Yes.

3. Can Promotions be accepted from promotion lists when there is a suspended list for the same title and salary grade of position?

Answer: Yes.

4. When the suspended list is reduced to one or two names (a) is appointing officer obliged to select therefrom, or (b) should the Civil Service Commission certify the name or names remaining on the suspended list with the addition of necessary number of names from the regular eligible list to make a complete certification of three names?

Answer: (a) No, (b) Yes.

5. Can persons whose names appear on suspended list be reappointed under civil service rule XVI. subdivision 1, regardless of their standing on the list?

Answer: Yes.

6. Can transfers which meet the conditions of the transfer rule be allowed regardless of suspended lists?

Answer: Yes.

Dated *July* 21, 1921.

CHARLES D. NEWTON,
Attorney-General.

To THE STATE CIVIL SERVICE COMMISSION.

D. EXTRA COMPENSATION

(a) State May Pay Additional Compensation for Work Outside Regular Hours and Duties (§ 43).

December 22, 1921.

STATE TAX COMMISSION, *The Capitol, Albany*, N. Y.

GENTLEMEN.— Receipt is acknowledged of yours of the 19th inst., with reference to the payment of additional compensation to a Mr. Fisher connected with your department.

In the case referred to and under the circumstances connected with it, I am of the opinion that it would be legal to pay Mr. Fisher extra compensation for looking after the furnace required to heat the building at No. 21 Washington avenue, Albany, N. Y., where one of your bureaus is located which work, I have been informed, is done outside of his regular hours early in the morning and late at night, and is not a part of his regular duties.

This work is absolutely necessary and is not within the province of the Superintendent of Public Buildings, or in any event he does not handle it. It might very properly be termed temporary emergency work.

I do not believe it comes within the prohibition against extra compensation contained in section 43 of the Civil Service Law or section 28, article III of the State Constitution.

The situation is, I believe, covered in an opinion of this office found in the Report of the Attorney-General for the year 1917 at page 325, which holds as follows:

"A civil service employee in one of the distinct bureaus of the office of the Secretary of State is entitled to compensation for work performed in another district bureau where such work is not within the scope of his original employment and is performed during such periods of time as he has not contracted to devote to the work of the bureau in which he is regularly employed."

Very truly yours,
CHARLES D. NEWTON,
Attorney-General.

E. EMPLOYEES' RETIREMENT SYSTEM *

(a) State Service Does Not Include Teaching in an Institution Not Supported from Public Funds (§ 50, subd. 8).

October 11, 1921.

HON. JAMES A. WENDELL, *State Comptroller, Albany, N. Y.*

DEAR SIR.— Receipt is acknowledged of your communication of the 5th inst.

You state that a member of the New York State Employees' Retirement System claims twenty-one years as prior service, to wit: eight years as a teacher in the Manhattan College of New York City and thirteen years as a teacher in the Christian Brothers' Academy, Albany, N. Y. You inquire if said teacher is entitled to the credit of twenty-one years for such service pursuant to subdivisions 8 and 9 of section 50 of chapter 741 of the Laws of 1920, as amended by chapter 365 of the Laws of 1921.

Subdivision 8 of section 50 of chapter 741 of the Laws of 1920 was amended by chapter 365 of the Laws of 1921, defining said service to mean "* * * service as teacher in the public schools of the State of New York, however paid * * *"

The question to be determined is whether or not Manhattan College of the City of New York and the Christian Brothers' Academy of Albany, N. Y., are "public schools" within the meaning of subdivision 8 of section 50, as amended.

It seems to me clear that neither of these institutions are public schools within the meaning of that term as used in said subdivision. They are private institutions of learning receiving no financial support from the State through appropriations nor from moneys raised by local taxation.

I therefore hold that the twenty-one years served as a teacher in the Manhattan College of New York City and as teacher in the Christian Brothers' Academy, Albany, N. Y., cannot be credited as prior service under the provisions of subdivision 8 of section 50 of chapter 741 of the Laws of 1920 as amended by chapter 365 of the Laws of 1921.

Very truly yours,
CHARLES D. NEWTON,
Attorney-General.

---

* The coverage of the general retirement pension and annuity system established for state employees by L. 1920, ch. 741, has been extended by acts of 1921 and 1922 to county and city employees not eligible to existing local systems and to certain state employees hitherto belonging to special systems.

(b) Special Deputy Clerks to the Supreme Court Paid by a County Are Not Eligible to Membership (§ 50, subd. 8).*

October 26, 1921.

HON. JAMES A. WENDELL, *State Comptroller, Albany, N. Y.*

DEAR SIR.— Receipt is acknowledged of yours of the 20th inst. By chapter 741, Laws of 1920, the New York State Employees' Retirement System was created.

Membership in such system is defined as follows:

> § 52. Membership of retirement system. Membership in the retirement system shall begin not earlier than the first day of January, nineteen hundred and twenty-one, and shall consist of:
>
> (a) All persons, except the exempt employees of the classified service of the state and persons specified in subdivision two of this section, who enter or re-enter such classified service after the first day of January, nineteen hundred and twenty-one, and who complete or shall complete six months of state service; and
>
> (b) All persons, except persons specified in subdivision two of this section, in state service, who file with the comptroller a statement duly executed and acknowledged consenting and agreeing to membership and to the deductions for annuity purposes prescribed in this article.
>
> 2. Persons who are or who may be entitled to benefit by existing laws providing for pensions and annuities for civil service employees wholly or partly at the expense of the state of New York or of any political subdivision thereof, shall not be members.

It will be noted that an essential qualification for membership in this system is that a person must be in *State service.*

Section 50, subdivision 8 of chapter 741 of the Laws of 1920, as amended, defines State service as follows:

> 8. State service shall mean service, whether appointive or elective, as an *official, clerk or employee* of the state of New York, including service as a teacher in the public schools of the state of New York, however paid, and any other branch of service and any former city or county institution now a state institution, *so far as such service is paid for by the state of New York or by any such institution*, except service on or after the first day of January, 1921, while such employee is, or may be, entitled to benefit by existing laws providing for pensions or annuities for civil service employees wholly or partly at the expense of the state of New York or of any political subdivision thereof.

This definition indicates that payment of salary by the State is an essential to entitle a person to become a member of the Employees' Retirement System.

The two men involved in your inquiry are special deputy clerks in the Supreme Court of the State of New York in and for the county of Westchester.

The records in the State Comptroller's office show they are not paid by the State. As a matter of fact, these men admit they are paid by the county of Westchester.

It might be further stated that the records of the State Civil Service Commission classified these positions as county positions. The examinations for such positions are confined to residents of Westchester county and to be entitled to appointment an applicant must be a resident of said county.

Chapter 185 of the Laws of 1913, as amended by chapter 557 of the Laws of 1915, amends the Judiciary Law in relation to retirement of employees of the Appellate Division of the Second Department, by adding section 117 as follows:

> § 117. Retirement of employees by the Appellate Division of Second Department. The appellate division of the supreme court of the second department is hereby authorized in its discretion to retire any clerk.

---

* Since this opinion was written, county employees have become eligible to the system by L. 1922, ch. 591.

> assistant clerk, stenographer, interpreter, librarian or attendant who shall have served as such in the supreme court in and for the second or ninth judicial district or in any court which has been consolidated with the said supreme court and who shall have become physically or mentally incapacitated for the further performance of the duties of his position, provided such service in one or more of such positions has continued for a period of twenty-five years or more; or any honorably discharged soldier or sailor of the civil war serving as such clerk, assistant clerk, stenographer, interpreter, librarian or attendant who at the time of such retirement shall have served continuously for a period of fifteen years and who shall have reached the age of seventy years. Any person retired from service pursuant to this section shall be paid an annual sum or annuity to be determined by the appellate division of the second department not exceeding one-half of the average amount of his annual salary or compensation for a period of two years preceding the time of such retirement. Such annuity shall be paid in equal monthly instalments during the lifetime of the person so retired, and the amount thereof shall otherwise be collected and paid in the same manner as the salary or compensation of such person was required to be collected and paid at the time of such retirement.

Westchester county is in the Ninth Judicial District.

Chapter 568 of the Laws of 1921 was an act to provide a more uniform retirement plan for State employees, under the provision of the New York State Employees' Retirement System, and to repeal certain acts and parts of acts providing for other retirement systems.

It provides in part as follows:

> § 1. All state employees, except teachers in the State College for Teachers and the State Normal schools who shall be considered as teachers subject to the provisions of article forty-three-b of the education law, and, except such state employees as are otherwise provided for by the insanity law and the prison law, who are included under the provisions of any law repealed by section six of this act, who elect to become members of the New York State Employees' Retirement System on or before January first, nineteen hundred and twenty-two, shall become members of such system and shall be subject to all the provisions of law relative to such system with the exception that they shall be entitled to credit for prior service as defined by section fifty-three of article four of the civil service law, including service as a grand jury stenographer, up to and including July first, nineteen hundred and twenty-one. * * *

Section 6 of the last mentioned act repeals chapter 185 of the Laws of 1913 as amended by chapter 557 of the Laws of 1915, which laws are above referred to.

Under the provisions of chapter 568 of the Laws of 1921, all *State Employees*, with certain exceptions, who are included under the provisions of any law repealed by section 6 of said act, if they elect so to do by a given date, shall become members of the Employees' Retirement System, *subject to all provisions of law relative to such system.*

I have gone at some length into the legislation with reference to the question involved so that the whole situation might be before you.

I am of the opinion that the two men in question are not entitled to become members of the Employees' Retirement System for the reason their salaries are not paid by the State of New York as required by the provisions of chapter 741 of the Laws of 1920 (Employees' Retirement System).

There is a further reason why they are not entitled to become members, an actuarial one and that is, no provision is anywhere made for the payment by the State or by Westchester county of the contribution to the reserve fund which must be made in addition to the contribution by the member.

The cases referred to in your letter as having been cited by these men are not applicable to the situation here for the reason that in *People ex rel. Wogan* v. *Rafferty*, 208 N. Y. 451, the question there involved was the right of the Legislature to take from a constitutional officer the substance of the office itself and to transfer it to another who is to be appointed in a different manner, and to hold the office by a different tenure than that which was provided for by the Constitution of the State. It was there held such action by the Legislature was not a legitimate exercise of the right to regulate the duties or emoluments of the office, but was an infringement upon the constitutional mode of appointment. It is clear this decision has not bearing upon the instant case.

Olmstead v. *Meahl*, 219 N. Y. 270, was a taxpayer's action against a county clerk to prevent him from removing special deputies then holding office and appointing others in violation of the civil service rules.

It was held that county clerks and their special deputies, appointed for that purpose, *are state officers* when performing their duties as clerks of the Supreme Court and County Court.

The general purport of these decisions is that county clerks and their deputies and special deputies are State officers. The determining factor in this matter is not whether these men are State employees, but whether their salaries are paid by the State as required by chapter 741 of the Laws of 1920.

There seems to be much confusion in the minds of many as to the meaning of "state service." They do not differentiate between State service or employment, as such, and the credit that shall be given for length of service or employment for the State under the provisions of the Employees' Retirement System.

Very truly yours,
CHARLES D. NEWTON,
Attorney-General.

(c) Teachers in the State Agricultural and Industrial School at Industry Belong to the General System (§ 50, subd. 8; § 52, subd. 2).*

FIRST OPINION

INDUSTRY, NEW YORK, *Nov.* 16, 1921.

HON. CHARLES D. NEWTON, *Attorney-General, State of New York, Albany, N. Y.*

MY DEAR MR. NEWTON.— When the change in the retirement laws governing teachers in institutions, State Normal Schools and the Public Schools of the State made by the last Legislature, was brought to the attention of the faculty of our school department, they requested the right to benefit by the Educational Retirement Fund Law.

The Superintendent of Schools, Miss Julia C. Ganiard, wrote Dr. Gilbert, then Acting Commissioner of Education, in regard to the matter, last May. In his reply, Dr. Gilbert stated that it seemed to him, by a reasonable construction of The State Teachers Retirement Law, the teachers of this school might be brought under its provisions. He stated, however, that he did not have the power to determine the question and suggested that the matter be brought to your attention for a ruling.

The members of the faculty of this school are experienced teachers duly licensed by the Education Department of the State. They each have a Normal School diploma or its equivalent. Seven of them are graduates of Geneseo Normal School. Among the others are graduates of Cortland, Buffalo and Brockport Normal Schools, and a graduate of Elmira College.

Some of their reasons for requesting to benefit by the Educational Retirement Fund Law are:

---

* Since this opinion was written, L. 1922, ch. 104, has made the teachers in the State Agricultural and Industrial School members of the State Teachers' Retirement System under Article 43-b of the Educational Law.

First, as a matter of justice to be classed with the other teachers of the State.

Second, in the Educational Retirement Fund Law, teaching experience outside the State, to the limit of ten years may be counted, whereas, in the Civil Service Retirement Fund Law, only teaching experience within the State may be counted. Some of our teachers have taught five years or more in other States.

Third, the rate of premium in the Educational Retirement Fund Law is lower and unvarying, while in the Civil Service Retirement Fund Law it is variable. It was frankly stated that a better rate could be given for teachers than could be given in a law covering all classes of workers under the Civil Service.

Fourth, it would simplify the administration of the pension fund for teachers, as vacancies occurring in this school in the future could be filled by teachers, meeting State requirements, and our teachers could accept positions in the schools without loss or change in regard to pension.

Thanking you in advance for your distinguished consideration, and with kindest personal regards, I am,

Very truly yours,
HOBART H. TODD,
Superintendent.
November 25, 1921.

MR. HOBART H. TODD, *Superintendent-Treasurer, State Agricultural and Industrial School, Industry, New York.*

DEAR SIR.— Receipt is acknowledged of yours of the 18th inst., with reference to the rights of teachers in the State Agricultural and Industrial School at Industry, New York, to be members of the "New York State Teachers' Retirement System," as provided for in article 43b of the Education Law, constituting chapter 16 of the Consolidated Laws, as amended.

Section 1103 of said article 43b provides for this retirement board, which is charged with administration and operation of this retirement system.

Paragraph 2 of section 1106 of said article 43b provides as follows:

> (2) The counsel of the state education department shall be the legal advisor of the retirement board.

Under these circumstances in order to avoid the possibility of a conflict in rulings I have made it a rule not to render any opinion upon questions arising out of the law creating the New York State Teachers' Retirement System, except to and at the request of the Commissioner of Education or the counsel of the State Education Department.

Ordinarily all questions with reference to this retirement system should be addressed to and be answered by the counsel of the system. Should such counsel feel that an opinion from this office in any particular case, is necessary an opinion will be rendered at his request.

However, in order to save time, I have had this matter taken up with the Education Department.

Attached hereto is a copy of an opinion by Hon. Frank B. Gilbert, as Acting Commissioner of Education and counsel of the State Education Department and legal advisor of the Retirement Board.

He holds that teachers in your institution are not eligible to membership in the New York State Teachers' Retirement System which is confined to public school teachers, teachers in State Normal Schools and teachers in the State College for Teachers at Albany, N. Y.

I agree with him in his conclusion.

Article 43a of the Education Law created a Retirement Fund for Teachers in *State Institutions.*

Chapter 568, Laws of 1921, repealed said article 43a effective July 1, 1925, and numerous other pension laws and provided in part as follows:

> § 1. All state employees, except teachers in the State College for Teachers and the State Normal schools who shall be considered as teachers subject to the provisions of article forty-three-b of the educa-

> tion law, and, except such state employees as are otherwise provided for by the insanity law and the prison law, who are included under the provisions of any law repealed by section six of this act, who elect to become members of the New York State Employees' Retirement System on or before January first, nineteen hundred and twenty-two, shall become members of such system and shall be subject to all the provisions of law relative to such system with the exception that they shall be entitled to credit for prior service as defined by section fifty-three of article four of the civil service law, including service as a grand jury stenographer, up to and including July first, nineteen hundred and twenty-one. * * *

I cannot escape the conclusion that teachers in your institution, which is a "*state institution*," as a result of the repeal of article 43a of the Education Law are not eligible to membership in the Teachers' Retirement System provided for by article 43b, but are eligible to join the New York State Employees' Retirement System provided for by chapter 741 of the Laws of 1920, being article 4 of the Civil Service Law.

The fact that the members of the faculty of your school are licensed by the Education Department of the State is not controlling. They are teachers in a "*State institution,*" as distinguished from teachers in the public school system of the State as defined by article 43b and chapter 568 of the Laws of 1921.

Very truly yours,
CHARLES D. NEWTON,
Attorney-General.

SECOND OPINION

COMPTROLLER'S OFFICE,
EMPLOYEES' RETIREMENT SYSTEM,

November 17, 1921.

HON. CHARLES D. NEWTON, *Attorney-General, Albany, N. Y.:*

DEAR SIR.—An opinion on the following is desired, perhaps more as Vice-Chairman of the Pension Commission than as Director of the Employees' Retirement System.

A teacher in one of the State institutions will have completed 30 years of teaching service in June, 1925, all of which service is credited toward a retirement under sections 1095 to 1099 of the Education Law, which sections were last amended by chapter 614 of the Laws of 1915.

For the school years beginning 1915 and ending June, 1919, this person was a teacher in the Bedford institution. The school year 1919–1920 this person taught at Round Ridge, N. Y., for the school years of 1920–1921, and presumably from the present time until June 30, 1925, this person has taught and will teach at the institution at Industry. The law provides that the last ten years of teaching service which may be credited toward a pension under the Institution Teachers' Retirement Plan must be in schools or institutions "supported by the State."

Question: Does the teaching at Round Ridge for the school year 1919–1920 cause this person to be not eligible to retirement under sections 1095 to 1099 of the Education Law?

A very early reply is requested, since the teacher desires to become a member of the Employees' Retirement System if she cannot retire under the Teachers' Retirement Plan and if she does not become a member before December 31, 1921, she will lose as a prior service credit all teaching service she may have had prior to July 1, 1921. You can readily see the point is quite vital to her.

Yours very truly,
JAMES A. WENDELL,
Comptroller.

November 25, 1921.

HON. JAMES A. WENDELL, *State Comptroller, Albany, N. Y.:*

DEAR SIR.— Receipt is acknowledged of yours of the 17th inst., with reference to the right of a teacher in a State institution to become a member of the Retirement System for teachers in State institutions created under article 43-a of the Education Law.

Article 43-a of the Education Law creates a retirement fund for teachers in State institutions.

Section 1095 of said article provides as follows:

> § 1095. Retirement of Certain Teachers in State Institutions and Institutions Receiving State Pupils. Every teacher in a State institution and in an institution for the instruction of the deaf and dumb and the blind, receiving State pupils whose instructions and support are paid for by the State, who, *for a period of ten years immediately preceding,* has been employed as a teacher in any college, school, institution or teachers' institute maintained and supported by the State, or in any such institution for the instruction of the deaf and dumb and the blind and who shall have been engaged in teaching in some college, university, school, academy, institution, teachers' institutes or in the public schools of this State or elsewhere during a period aggregating thirty years must, at his request, or may, on the order of the commissioner of education, be retired from such employment.

It will be noted that one of the qualifications to entitle a person to be retired under this system is, that such person must have been employed as a teacher in a school, college, etc., *supported by the State, for a period of ten years immediately preceding the date of retirement.*

By chapter 568 of the Laws of 1921, article 43-a above referred to is repealed, *effective July* 1, 1925.

It is clear that in the case referred to in your letter, the person in question would not have been in continuous service for ten years immediately preceding June 30, 1925, because of the period spent while teaching at Round Ridge, N. Y. (not a school supported by the State) and, therefore, would not be entitled to be retired under said law, viz., article 43-a of the Education Law.

However, under the provisions of chapter 568 of the Laws of 1921 such person would be entitled to membership in the New York State Employees' Retirement System as created by chapter 741 of the Laws of 1920, as amended.

Very truly yours,
CHARLES D. NEWTON,
Attorney-General.

July 29, 1921.

(d) Employees of the Institution for Defective Delinquents Belong to the General System (§ 50, subd. 8; § 52, subd. 2).

DR. WALTER N. THAYER, JR., *Superintendent, Institution for Defective Delinquents, Napanoch, N. Y.:*

DEAR SIR.— I acknowledge receipt of your letter of July 27th in which you state that the Comptroller has ruled that the change of name of your institution by chapter 483 of the Laws of 1921 does not deprive any of its employees of any rights which might be theirs under the Prison Retirement Law as amended by chapter 425 of the Laws of 1920.

The Comptroller's letter I learn was written under a misapprehension of the facts. It seems that he took the facts in your letter as conclusive.

An examination of chapter 483 reveals that the reformatory at Napanoch has been converted into a State Institution for Mental Defectives, and that whereas it was heretofore under the control of the Prison Department it is now "under the supervision, control and direction of the commission for mental defectives."

The State Prison Retirement Law relates solely "to a guard or other employee in a State prison or reformatory, or an employee in the prison department, * * *." An employee of the Prison Department within the meaning of the statute is "any person employed under the superintendent of state prisons."

Retirements under the Prison Retirement Law are based on service and there are no contributions on the part of the participants therein. There is, therefore, no question of vested rights involved.

Under this construction of the matter it appears further that the employees and officers in your institution may join the State Employees' Retirement System. If you will communicate with the Comptroller, he will give you full details and instructions.

Very truly yours,
CHARLES D. NEWTON,
Attorney-General.

(e) Members of the General System May Retain their Membership upon Transfer to Positions Covered by Special Systems (§ 50, subd. 8; § 52, subds. 2, 9).

FIRST OPINION

COMPTROLLER'S OFFICE, *April* 12, 1921.

HON. CHARLES D. NEWTON, *Attorney-General, Albany, N. Y.:*

DEAR SIR.—An opinion is requested in the following matter:

Supposition: Should a member of the Employees' Retirement System either by transfer or otherwise, from one position to another with no lapse in service, or with a lapse in service, providing that such member did not withdraw contributions from the Employees' Retirement System, become an employee in any of the institutions or departments provided for by a pension plan in the Insanity Law or the Prison Law, does his membership cease in the Employees' Retirement System, or may he of his own volition cease his membership in such system?

Attention is called to section 52, part 9 of the Employees' Retirement Law and section 72, parts 1 and 2.

This question was discussed verbally and it was rather decided that an employee changing his location of State service for whatever the cause, could elect the system he desired to be a member of.

This does not seem practicable and would be pleased to discuss the matter further if necessary.

Yours very truly,
JAMES A. WENDELL,
Comptroller.

June 28, 1921.

HON. JAMES A. WENDELL, *State Comptroller, Albany, N. Y.:*

DEAR SIR.—Answering your question in your letter of April 12th, last, would say it is my opinion that under the circumstances therein named, a member changing his location of State service would not be at liberty to elect in which pension system he desires to be a member.

If he was already a member of the Employees' Retirement System (chapter 741 of the Laws of 1920) he could not of his own volition withdraw from the Employees' Retirement System and join another system unless, under the law, he was compelled to join the system in connection with the department to which he might have been transferred.

Paragraph 9, section 52, of chapter 741 of the Laws of 1920, provides when and how persons cease to be members of the Employees' Retirement System.

However, if the Legislature should pass any law granting pensions to be paid wholly or in part by the State outside of the Employees' Pension System to any particular class of State employees, the above ruling might not apply as far as the right to withdraw from the Employees' Pension System and have their contributions returned is concerned. This letter I think also answers your communication of the 18th inst.

Very truly yours,
CHARLES D. NEWTON,
Attorney-General.

SECOND OPINION

COMPTROLLER'S OFFICE, *June* 30, 1921.

HON. CHARLES D. NEWTON, *Attorney-General, Albany, N. Y.:*

DEAR SIR.— This Bureau has your letter of June 28th, rendering an opinion as requested in a letter of April 12th.

You state that a member of the Employees' Retirement System being still in State service " could not of his own volition withdraw from the Employees' Retirement System and join another system unless, under the law, he was compelled to join the system in connection with the department to which he might have been transferred."

To be specific, if A, an employee in the Secretary of State's office, a member of the Employees' Retirement System, should be transferred to the Hospital Commission office, would he still be a member of the Employees' Retirement System?

If he were a new entrant in State service and entered the Hospital Commission, he would under the Hospital Law become a member of that system.

But, being a member of the Employees' Retirement System and since by transfer he does none of the things stated in subdivision 8 of section 52 of the Employees' Retirement System Law, does he cease membership in the Employees' Retirement System?

I can readily see that if the Legislature should pass in the future, a law granting to certain employees pensions other than that granted by chapter 741 of the Laws of 1920, that the latter law might apply, but the question is, can a present member of the Employees' Retirement System still in State service cease membership in the Employees' Retirement System except as he may do one or more of the things enumerated under the above referred to subdivision 9 of section 52.

Yours very truly,
JAMES A. WENDELL,
Comptroller.

July 7, 1921.

HON. JAMES A. WENDELL, *State Comptroller, Albany, N. Y.:*

DEAR SIR.— Receipt is acknowledged of yours of the 30th ulto.

With reference to the instance mentioned in the third paragraph of your letter, I advice that under such circumstances said transferred employee would be still a member of the Employees' Retirement System.

I agree with you in your conclusion in the fifth paragraph of your letter. I am of the opinion that the employee does not cease membership in the Employees' Retirement System for the reasons stated in such paragraph.

Answering the query in the sixth paragraph of your letter, I advise that as a general proposition a present member of the Employees' Retirement System still in State service, continues his membership in the Employees' Retirement System, except as he may do one or more of the things enumerated under subdivision 9 of section 52 of chapter 741 of the Laws of 1920.

But this rule would not apply to a case that might arise under the new Military Law where a separate pension system in favor of certain war veterans is created. Present members of the Employees' Retirement System, who under the Military Law as amended, are covered by the pension system therein provided may withdraw from the Employees' Retirement System and have their contributions returned if they desire to be covered by the provisions of the Military Law.*

Very truly yours,
CHARLES D. NEWTON,
Attorney-General.

THIRD OPINION

ALBANY, N. Y., *July* 29, 1921.

HON. CHARLES D. NEWTON, *Attorney-General, Albany, N. Y.:*

DEAR SIR.— * * * Please advise relative to the following:

1. When an employee is regularly appointed and immediately preceding that date he has been in the civil service of the State and has resigned to accept appointment in one of the prisons or the Prison Department, as in the case under consideration:

(a) Can or must he remain a contributing member of the Employees' Retirement System?

(b) Can or must he cease to be a member of the Employees' Retirement System and automatically become entitled to the retirement provisions of the Prison Law?

(c) Would a transfer from other than the prison service affect the case in any way?

2. If he has been formerly in the Civil Service of the State and some time has elapsed since such service but he has not resigned or withdrawn his contributions as a member of the Employees' Retirement System, what would be his right or requirement relating to pension?

3. If he has resigned, withdrawn his contributions and ceased to be a member would this in any way affect his eligibility for pension under the provisions of the Prison Law, chapter 425, Laws of 1920?

Respectfully submitted,
C. F. RATTIGAN,
Superintendent.

September 13, 1921.

HON. CHARLES F. RATTIGAN, *Superintendent of Prisons, Albany, N. Y.:*

DEAR SIR.— Receipt is acknowledged of yours of July 29, 1921, and also of August 30, 1921.

The main question is, does the fact that section 410 of the Prison Law, providing for a retirement system for guards and other employees of the Prison Department, automatically cut a Prison Department employee (already a member of the Employees' Retirement System, chapter 741 of the Laws of 1920) out of such Employees' Retirement System and require him to be a member of the Prison Department Retirement System.

Subdivision 2 of section 52 of chapter 741 of the Laws of 1920 (Employees' Retirement System) provides as follows:

> Persons who are or may be entitled to benefit by existing laws providing for pensions and annuities for civil service employees wholly or partly at the expense of the State of New York or of any political subdivision thereof, shall not be members of the New York State Employees' Retirement System.

Section 410 of the Prison Law provides as follows:

> § 410. When Guards and Other Employees May Be Retired. A guard or other employee in a State prison or reformatory, or an employee in the prison department, who shall have served a term of employment of twenty-five years, which employment, in the case of a guard or employee in a state prison or reformatory, was either wholly in such prison or reformatory or partly therein and partly in another prison or reforma-

---

* See opinion relative to Military and Naval System under subtitle "f" immediately following.

> tory or in a state hospital or penitentiary, or which employment, in the case of an employee of the prison department, was either wholly in such department, or partly therein and partly as a guard or other employee in a prison, reformatory, hospital or penitentiary, or in one or more of them, and which, in the case of any such guard or employee in a state prison or reformatory or employee in the prison department, was either in one consecutive term or in two or more terms which shall together amount to a total period of employment of twenty-five years, may, if unable to perform his regular duties and in a manner satisfactory to the superintendent of prisons or superintendent of reformatories, as the case may be, be retired as hereinafter provided at one-half the salary paid to him for the year immediately preceding such retirement. Any such guard or employee who shall have reached the age of seventy years, who shall have served a term of employment of not less than fifteen years, may, if unable to perform his regular duties in a manner satisfactory to the superintendent of prisons or the superintendent of reformatories, as the case may be, be retired as hereinafter provided, and be paid such proportion of one-half of the salary paid him for the year immediately preceding such retirement, as the number of years served bears to the full term of twenty-five years. Such payment shall be payable out of moneys appropriated therefor, and shall not be revoked, diminished or subject to the claims of creditors. Such guard or employee may be retired when such action shall be in the interest of the State in the following manner: A guard or employee of the prison department shall be retired upon approval of the superintendent of prisons at the expiration of twenty-five years of service, upon application for such retirement to the superintendent of prisons; a guard or employee in a state reformatory shall be retired at the expiration of twenty-five years of service upon approval by the board of managers of such reformatory, upon application by such guard or employee to the superintendent of reformatories. Within the meaning of this section, an employee of the prison department means any person employed under the superintendent of state prisons.

I am of the opinion that the employee may still remain a member of the Employees' Retirement System and cannot be forced to join the Prison Department Retirement System for the following reasons:

In order to participate in the Prison Pension System, only service as a guard or other employee in a state prison or reformatory or an employee in the Prison Department is taken into consideration in computing length of service upon which the right to a pension rests. On the other hand under the Employees' Retirement System any and all State service is taken into account. To hold that a State employee transferred to the Prison Department must discontinue his membership in the Employees' Retirement System and join the Prison Department System would invariably work a great disadvantage to him, for he would lose the benefit of all the time he served in the other State departments, which could not be credited to him under the Prison Department System.

I believe that subdivision 2 of section 52 of the Employees' Retirement System Law is intended to cover those *already* "entitled to benefit by existing laws providing for pensions and annuities" or those entering departments which have separate pension systems of their own, as original appointees, and does not affect persons entering such departments who are already members of the Employees' Retirement System.

The rule is to avoid the retrospective reading of statutes, unless required by express mandate of the Legislature. A conclusion contrary to the one I have reached would deprive the employee of the benefit of years of State service prior to entry into prison employment.

There is another reason, viz.: the member of the Employees' Retirement System has not done any of the things which would terminate his membership in said system as provided for under subdivision 9 of section 52 of the Employees' Retirement Law, which reads as follows:

> 9. Should the State service of any member, in any period of ten consecutive years, amount to less than five years, or should he withdraw all or part of his accumulated contributions, or should he die or be retired on a pension, he shall thereupon cease to be a member.

Your questions all comprehend the same difficulty, but since you have placed your inquiry in categorical style, I will now answer them upon the basis of the above general statement.

Question 1-a

He remains a member of the Employees' Retirement System.

Question 1-b

He remains a member of the Employees' Retirement System and does not automatically become entitled to the retirement provisions of the Prison Law.

Question 1-c

A transfer from service other than prison service would not change the situation.

Question 2

He would remain in the Employees' Retirement System and be entitled to retirement under that system.

Question 3

This is answered in the negative.

Very truly yours,
CHARLES D. NEWTON,
Attorney-General.

(f) Members of the General System May Withdraw and Join Special Systems Newly Made Available for Them (§ 50, subd. 8; § 52, subds. 2, 9; § 72).

COMPTROLLER'S OFFICE, *June* 17, 1921.

HON. CHARLES D. NEWTON, *Attorney-General, Albany, N. Y.:*

DEAR SIR.— Chapters 587, 588 and 595 of the Laws of 1921, being Senate Bills Nos. 1493, 1669 and 1739, respectively, relate to the Military Law, and provide some sort of pension for certain military employees. Several of these military employees are members of the N. Y. S. Employees' Retirement System. When these military employees became members of the Employees' Retirement System they under section 72 waived all rights to any other retirement plan at the expense of the State of New York.

Question: Can these military employees who are members of the Employees' Retirement System and if they were not members thereof, otherwise eligible to retirement under said Military Law, be retired under the Military Laws and withdraw their contributions from the Employees' Retirement System?

Yours very truly,
JAMES A. WENDELL,
Comptroller.

July 6, 1921.

HON. JAMES A. WENDELL, *State Comptroller, Albany, N. Y.:*

DEAR SIR.— Receipt is acknowledged of yours of the 17th ulto.

Section 19-a of chapter 588 of the Laws of 1921, being an Act to amend the Military Law generally provides:

> § 19-a. Retiring Veterans of the Late Civil War, Spanish-American War and World War and Granting them Pensions. Every soldier, sailor or marine of the army or navy of the United States in the late Civil

> War, Spanish-American War and World War honorably discharged from service who shall have been employed for a period of twenty years or more in the *military or naval service of the State of New York under pay from State funds*, and who shall have reached the age of sixty-four years, may, upon his own request and the approval of the adjutant-general, or upon being incapacitated for performing the duties of his position *after ten years of service*, shall be retired from such employment, and thereafter during his life there shall be paid to him in the same manner and *by the same agency and from the same source* that the salary or wages of his former position were customarily paid to him an annual sum equal in amount to one-half the salary or wages paid to him in the last year of his employment.

There is thus created a pension system covering employees of the Permanent Military and Naval Establishment of the State, who are under pay from State funds.

The Legislature having established the New York State Employees' Retirement System (chapter 741, Laws 1920) was not thereby precluded from establishing another system taking in a special class of employees, some of whom have already joined the system under chapter 741 of the Laws of 1920.

I am not able to find any provision of law or any good reason why a person who, by the terms of a law passed subsequently to chapter 741 of the Laws of 1920, is entitled to be covered by another pension plan and had already joined the system under chapter 741 of the Laws of 1920, cannot withdraw from such system, join the new one and have his contributions to the Employees' Retirement System refunded. To hold otherwise would tend to defeat the clearly expressed purpose of the Legislature in passing chapter 588 of the Laws of 1921 (Military Law). The Legislature knew of the existence of the Employees' Retirement System and most assuredly had it in mind when it provided another system of retirement for those employees in the Permanent Military and Naval Establishment of the State. It might be noted in passing that employees of the Permanent Military and Naval Establishment of the State are not in the Civil Service of the State, as has been frequently held by the courts and the fact that these employees do not, therefore, enjoy the various advantages of the Civil Service Law, might have been one of the considerations in the mind of the Legislature when it created the pension plan covered in the amendment to the Military Law.

I do not believe it can be held that employees covered by the pension system in the Military Law, who may have previously joined the Employees' Retirement System can be said to have "waived all rights to any other retirement plan at the expense of the State of New York," with reference to a system that was not in existence at the time they joined the Employees' Retirement System and which was not at that time even contemplated. The waiver referred to in your letter could not be effective "in future" especially where such waiver did not specifically state that it was to have such an effect. I do not believe that section 72 of chapter 741 of the Laws of 1920 can be construed to mean such a comprehensive waiver as you seem to think.

I am, therefore, of the opinion that the employees of the Permanent Military and Naval Establishment of the State who are members of the Employees' Retirement System, and if they were not members thereof otherwise eligible to retirement under said Military Law, are entitled to be retired under the Military Law as amended and to withdraw their contributions from the Employees' Retirement System.

Very truly yours,

CHARLES D. NEWTON,
Attorney-General.

(g) A Retired Employee May Teach School While Receiving Pension and Annuity (§ 50, subd. 8; § 61, subd. 3).

32 SOUTH HAWK STREET, ALBANY, *July* 11, 1921.

HON. CHARLES D. NEWTON, *Attorney-General, State of New York, Albany, N. Y.:*

DEAR SIR.— I am a graduate of the State College for Teachers and have had twelve years' experience in teaching.

Since April twenty-second, nineteen hundred twelve (1912) I have been employed as a clerk in the State Labor Department. On June sixteenth of this year I was notified that my position was to be abolished and that after July first my services would no longer be required.

According to chapter 365 of the Laws of 1921 I am entitled to draw a pension; I have applied for same and met all necessary requirements.

As I have no position nor means of livelihood at the present time I may find it necessary to return to the teaching profession.

The question now arises as to whether or not I may teach in the public or private schools of this or any other State and at the same time enjoy the benefits of the Employees' Retirement fund.

I therefore ask that you render an opinion covering these circumstances so that I may make some plans by which I may earn my living.

Should your opinion be adverse and the pension discontinued in the event of my teaching, kindly tell me if said pension will be resumed should I cease teaching.

I am submitting the above facts in accordance with your instructions.

Thanking you for your courtesy in this matter, I am

Yours truly,
MARY E. KENNAR.

July 28, 1921.

MISS MARY E. KENNAR, 32 *South Hawk Street, Albany, N. Y.:*

DEAR MADAM.— Receipt is acknowledged of your letter of July 11th asking for my construction of article IV of the Civil Service Law, which is the article in reference to the retirement of officers and employees in the State Civil Service.

I note from your letter that you were employed as a clerk in the State Labor Department or Industrial Commission from April 22, 1912, to June 30, 1921, and that previous to that you had 12 years' experience in teaching. I assume that the teaching was in the public schools.

You were a member of the State Retirement System and have applied for the retirement privileges given you under subdivision 8 of section 50 and subdivision 3 of section 61, as amended by chapter 365 of the Laws of 1921.

You ask for an opinion as to whether or not you may teach in the public or private schools of this or any other State and at the same time enjoy the benefits of the retirement fund.

The subdivisions mentioned read as follows:

> 8. State service shall mean service, whether appointive or elective, as an official, clerk, or employee of the State of New York, including service as teacher in the public schools of the State of New York, however paid, and any other branch of service and any former city or county institution now a State institution, so far as such service is paid for by the State of New York or by any such institution, except service on or after the first day of January, nineteen hundred and twenty-one, while such employee is, or may be, entitled to benefit by existing laws providing for pensions or annuities for civil service employees wholly or partly at the expense of the State of New York or of any political subdivision thereof.

3. Should a member be discontinued from State service through no fault of his own after having completed twenty years of total service, he shall be paid, as he may elect, as follows:

(a) The amount of his accumulated contributions, or

(b) An annuity of equivalent actuarial value to his accumulated contributions, and, in addition, a pension beginning immediately having a value equal to the present value of a pension beginning at age sixty of one-seventieth of his final average salary multiplied by the number of his years of prior service, plus one-one hundred and fortieth of his final average salary multiplied by the number of his years of service as a member.

I find nothing in the statute prohibiting the resumption by you of teaching in the public or private schools of this or any other State and at the same time enjoying the benefits of the retirement fund. If you should resume teaching in the public schools you would not in my opinion reenter the State service within the meaning of the definition given in subdivision 8 of section 50, for you would then be an employee who is or may be " entitled to benefit by existing laws providing for pensions and annuities for civil service employees wholly or partly at the expense of the State of New York or of any political subdivision thereof," and you would also be prohibited while so employed from reentry into the Retirement System as a contributing member under subdivision 2 of section 52 which contains similar provisions. In other words, you would be such an employee who is or may be entitled to benefit under a teachers' retirement fund.

In the foregoing statement, I have not intended to cover teaching in a State Normal School or Teachers' college.

Please understand also that I make no ruling at this time as to whether or not you might join a local teachers' retirement fund, nor do I rule on the question of your reentering into the State service as a clerk for one of the State departments. The latter situation does not seem to be specifically covered by the statute, but I think it would be entirely proper for the Attorney-General in such case to advise the Comptroller that he could make a ruling permitting reentry into the State service under similar regulations to those provided for other persons who become entitled to retirement benefits and who are later restored to active service.

Very truly yours,
CHARLES D. NEWTON,
Attorney-General.

(h) Final Average Salary is Based upon Last Five Years of Service or upon Total Service if Such Total is Less Than Five Years (§ 50, subd. 14).

COMPTROLLER'S OFFICE, *December* 17, 1920.

HON. CHARLES D. NEWTON, *Attorney-General, Albany, N. Y.:*

DEAR SIR.— Section 50, part 14 of chapter 741 of the Laws of 1920 defines " Final average salary."

In the following examples, what is the final average salary?

1. A was employed in a State department 11 years ago at a salary of $3,000. He has not done any work for the State of New York in the past 11 years. He began work for the State on December 13, 1920, and will be employed until January 15, 1921, on an annual salary of $6,000. What will be his final average salary as of January 15, 1921?

2. B's last employment was in the year 1918, ending December 31st. For the calendar years 1916, 1917, 1918, he was employed at $4,000 per year and received $12,000 for the three years mentioned. He began service on December 1, 1920 at a salary of $2,000 per annum and received $166.66 for the month of December. If B retires on January 1, 1921, what will be his final average salary?

Yours very truly,
EUGENE M. TRAVIS,
Comptroller,

February 7, 1921.

HON. JAMES A. WENDELL, *State Comptroller, Albany, N. Y.*

DEAR SIR.— I have given careful consideration to the questions raised in the letter from your department dated December 17, 1920.

I have come to the conclusion that the word "immediately" in subdivision 14 of § 50 does not affect the meaning of the sentence in which it is used. The provision is: "Final average salary shall mean the average annual compensation of a member for State service during his five years of State service immediately preceding his date of retirement." There is some ambiguity, due to the word "immediately," but I think that word may be overlooked without changing the meaning of the paragraph.

"*His* five years of *state service* * * * preceding his date of retirement" refers to the last five years of time in which the employee was in State service, excluding periods when he was not in State service.

I therefore answer your concrete questions as follows:

A was employed for 33 days at the rate of $6,000 per annum, before that he was employed at the rate of $3,000 for more than five years — the length of time intervening makes no difference. His final average salary would be one-fifth of what he received at the rate of $6,000 for 33 days plus what he received at the rate of $3,000 for five years less 33 days.

B was only employed three years and one month altogether — his total receipts were $12,166. His final average salary is $12,166 divided by three and one-twelfth.

Yours very truly,

CHARLES D. NEWTON,
Attorney-General.

(i) A State Employee Whose Posiition is Abolished "Reenters" the Service upon Appointment to Another Position (§ 52, subd. 1, par. a).

COMPTROLLER'S OFFICE, *March* 24, 1921.

HON. CHARLES D. NEWTON, *Attorney-General, Albany, N. Y.:*

DEAR SIR.— With reference to section 52 of subdivision (a)* of the Employees' Retirement System Law:

The Superintendent of Public Works suspended two men from duty on February 19, 1921, their positions having been abolished. They were reinstated as guards on March 19, 1921 in the competitive class of the Civil Service.

Question: Are they "Re-entrants" as mentioned in subdivision (a) and must they become members of the Employees' Retirement System after six months of service?

It should be borne in mind that these employees had certain Civil Service rights in that they were placed on the preferred list and must have been appointed to similar positions held by them at the time of severance from State service before any persons could be appointed from a regular eligible list for the same service. At the time they had the right to elect and did elect not to become members of the Employees' Retirement System. The question arises as to whether they still have this right or are they compelled to become members after six months of service?

Yours very truly,

JAMES A. WENDELL,
Comptroller.

---

* Reference should read paragraph "a" of subd. 1 of § 52.

March 29, 1921.

HON. JAMES A. WENDELL, *State Comptroller, Albany, N. Y.:*

DEAR SIR.— Receipt is acknowledged of yours of the 24th inst. inquiring as to the application of section 52, subdivision (a) of the Employees' Retirement System Law.

When the two men in question were suspended on February 19, 1921, because their positions had been abolished, they ceased to be employees of the State, their salaries ceased, they were dropped from the payroll of the department and they were not on a leave of absence without pay.

The fact that under the Civil Service Law, they were entitled to be placed on a "preferred list" for possible reappointment to a position similar to the one previously held by them does not change the situation. They had ceased to be employees of the State, and in the course of events might never be reappointed and when they were appointed to the new position they entered as original appointees.

It is, therefore, my opinion that these men must become members of the Employees'. Retirement System after six months of service, in accordance with subdivision (a) of section 52 of chapter 741 of the Laws of 1920.

Very truly yours

CHARLES D. NEWTON,
Attorney-General.

(j) Retirement May Occur Not Less Than Thirty Days After Application (§ 62, subd. 1).

March 29, 1921.

HON. JAMES A. WENDELL, *State Comptroller, Albany, N. Y.*

DEAR SIR.— Receipt is acknowledged of your letter of March 25th inquiring as to the meaning of a part of subdivision 1 of section 62 of chapter 741 of the Laws of 1920.

Section 62, subdivision 1 provides as follows:

> Any member in state service may retire upon written application to the State Comptroller setting forth at what time, not less than thirty days subsequent to the execution and filing thereof, he desires to be retired, provided that said member at the time so specified for his retirement shall have attained the age of sixty years.

When the Legislature passed the law it might have had in mind as you suggest "to protect the administrator of the employees' retirement system against a rush of retirements or against an unreasonable request for retirement immediately."

But is seems to me it had particularly in mind, and it was its intention to carefully fix a time definite and certain when applications for retirements must be filed and a period before the expiration of which retirements could not be effective, and this for the purpose of enabling the necessary investigations, adjustments, etc., to be made by the director of the retirement system and such re-adjustments, appointments, etc., that might be necessary for the superior of the retiring employee to make.

I am, therefore, of the opinion that the thirty day provision is mandatory, and that an application for retirement must be in the hands of the State Comptroller thirty days before the person can be retired.

Very truly yours,

CHARLES D. NEWTON,
Attorney-General.

OTHER LAWS

(a) School Superintendents Are Members of the State Teachers' Retirement System

February 5, 1921.

HON. JAMES A. WENDELL, *State Comptroller, Albany, N. Y.*

DEAR SIR.— I have considered the question submitted by you and the Department of Education with respect to the case of Professor Hamilton, Superintendent of the New York State School for the Blind. The Education Law (§§ 1095–1099) provides for retirement of teachers in State institutions. The word "teachers" as used in the Education Law generally, includes superintendents. They are really nothing but head teachers. In private schools ordinarily teachers are called masters and the superintendent is called the head master. The fact that the superintendent may do very little actual teaching does not make him any the less a teacher within the generally accepted sense of the word. It would seem absurd to say that a teacher in an institution being accorded the benefits of the pension system provided in the Education Law, after serving for a considerable time, would suddenly become excluded from those benefits by being promoted in his own institution.

I understand that heretofore other superintendents of state schools have been retired under the Education Law Pension, establishing a precedent and I see no reason why this precedent should be upset.

I advise you that in my opinion the Superintendent of the State School for the Blind is a teacher within the meaning of §§ 1095–1099 of the Education Law, and being eligible to the pension therein provided, is not eligible to membership in the State Employees' Retirement Fund.

Yours very truly,

CHARLES D. NEWTON,

Attorney-General.

(b) Ten Years Continuous Service Is Prerequisite to Retirement of Civil War Veteran Employed in Adjutant General's Office.

You ask whether or not ten years' service in the office of the Adjutant-General is a condition precedent to the retirement of a Civil War veteran employed in your office in case of incapacity under the provisions of chapter 557 of the Laws of 1918.

Chapter 557 of the Laws of 1918 added section 19-a to the Military Law which provides that:

> Every soldier, sailor or marine of the army or navy of the United States in the late civil war honorably discharged from the service who shall have been employed for *a continuous period of ten years or more* in the office of the adjutant-general of the state of New York and who shall have reached the age of seventy years may, upon his own request and the approval of the adjutant-general, or upon being incapacitated for performing the duties of his position, shall be retired from such employment, and thereafter during his life the adjutant-general shall pay to him in the same manner that the salary or wages of his former position were customarily paid to him an annual sum equal in amount to one-half the salary or wages paid to him in the last year of his employment; provided, however, that the amount so to be paid to such retired veteran shall not exceed the sum of one thousand dollars per annum.

I am of the opinion in order that a veteran of the Civil War, who is an employee of the Adjutant-General's office, may be retired under article 1, chapter 41 of the Laws of 1909, constituting chapter 36 of the Consolidated

Laws as amended by chapter 557 of the Laws of 1918, it must appear that such veteran has been employed for a continuous period of ten years or more in the office of the Adjutant-General of the State of New York. This service of ten years is an absolutely necessary condition precedent to his right to retirement, and without which, he does not come under the provisions of such act.

March 12, 1921.

CHARLES D. NEWTON,
Attorney-General.

To EDWARD J. WESCOTT, *The Adjutant-General's Office.*

(c) An Ex-Service Man Undergoing Vocational Training May Operate a Motor Vehicle Without Chauffeur's License.

A Mr. Neubauer of Schenectady states than an ex-service man, twenty-five years of age, is in his shop learning the sign painting trade. That said person receives no compensation from him but is paid by the government for this vocational training. He further states that there are times when it is necessary for the person so engaged in learning the trade to operate a Ford motor car owned by Mr. Neubauer. You ask for my opinion as to whether it is necessary for the said ex-service man to be licensed as a chauffeur to entitle him to operate said car.

Section 289, subd. 4 of the Highway Law provides that:

> Unlicensed operators or chauffeurs cannot drive motor vehicle. An operator's license shall not entitle a person to drive a motor vehicle as an employee or for hire. No person shall operate or drive a motor vehicle upon a public highway of this state after the first day of August, nineteen hundred and seventeen, unless such person shall have complied in all respects with the requirements of this section and of section two hundred and eighty-two of this act; * * *

Section 281 of the Highway Law defines the term "chauffeur" as follows:

> * * * The term 'chauffeur' shall mean any person operating or driving a motor vehicle, as an employee or for hire. * * *

The question to be determined is whether or not an ex-service man receiving vocational training and who receives no compensation from the person from whom he is receiving such instruction, is a "chauffeur" within the meaning of the term as defined in section 281.

It seems to me that this question should be answered in the negative. It is clear that he is not hired by Mr. Neubauer to perform any duties, neither is he paid by the government to operate a motor vehicle, but is merely made an allowance to cover his maintenance and support while receiving vocational instruction, nor is he employed by Mr. Neubauer within the meaning of the term as used in the statute for the relation of master and servant does not exist. It is not easy to define the relationship that exists between them, but it seems to me, under the facts presented, that the ex-service man in operating a Ford car in connection with his instruction in a vocational trade is not operating or driving a motor vehicle as an employee or for hire, and he is, therefore, not required to secure a chauffeur's license.

February 4, 1921.

CHARLES D. NEWTON,
Attorney-General.

To JOHN J. LYON, *Secretary of State.*

(d) An Unpaid Volunteer May Drive Motor Fire Apparatus Without Chauffeur's License.

Must drivers of motor fire apparatus be licensed as chauffeurs?

If the persons driving the motor fire apparatus are not employed by the village and are not paid for the performance of such duty, but perform the same gratis, they do not fall within the definition of the term "chauffeur" as defined in section 281 of the General Highway Law and, therefore, need not be licensed as chauffeurs.

July 11, 1921.

CHARLES D. NEWTON,
Attorney-General.

To J. ARCHER RACKETT, *Greenport, L. I.*

(e) Armistice Day as Appointed by President and Governor Is a Legal Holiday.

Must a county clerk's office be closed November 11th, Armistice Day?

In my opinion this day is a legal holiday.

Section 24 of the General Construction Law, provides:

> Holidays; half-holidays.— The term includes the following days of each year; * * * each day appointed by the President of the United States and the Governor of this state as a day of general thanksgiving. general fasting and prayer or other general religious observances * * *.

I cannot find that any occasion has heretofore arisen to construe the quoted part of the statute as applicable to other than the general Thanksgiving Day customarily set for the last Thursday of November. However. I have before me the proclamation of the President under date of the 4th of November setting aside Armistice Day as a holiday in memory of those who gave their lives in the late war as typified by the Unknown and Unidentified Soldier, and recommending the Governors of the several States proclaim that the people pause in their usual pursuits as a mark of respect on this solemn occasion. The President recommends that all public and church bells throughout the United States be tolled between 11:45 and noon, and that from noon for two minutes all devout and patriotic citizens of the United States indulge in a period of silent thanks to God for these valorous lives and of supplication for His divine mercy and for His blessings upon our beloved country.

In accordance with these recommendations I understand the Governor to-day will likewise issue a proclamation.

I think there can be no doubt, therefore, that Armistice Day is a day appointed by the President and by the Governor as a day of general religious observances, and also as a day of general thanksgiving and prayer.

I am, therefore, of the opinion that this is a legal holiday within the State of New York, and that the county clerk's office is not required to be kept open.

November 7, 1921.

CHARLES D. NEWTON,
Attorney-General.

To H. H. KENT, *Herkimer, N. Y.*

(f) Ambulance Company Armory Employees Are Entitled to Five Dollars Per Day.

September 20, 1921.

HON. GEORGE R. FEARON, 935 *University Block, Syracuse, N. Y.*

MY DEAR SENATOR.— I acknowledge receipt of your letter of the 17th instant asking for an opinion with reference to section 189 of the Military Law. You wish in particular to be advised with reference to the maximum pay of employees in the armory of an ambulance company.

Section 189, so far as this matter is concerned, has been amended to read as follows by chapter 587 of the Laws of 1921:

> § 189. Compensation of employees in armories. The persons appointed under the provisions of the two preceding sections shall receive compensation for the time actually and necessarily employed in their duties as follows: (a) Superintendents, not to exceed six dollars per day. (b) Armorers, engineers, electricians and technical laborers employed in armories occupied as division or brigade headquarters or by a regiment, battalion, squadron or similar organization, not to exceed six dollars per day. (c) Armorers and technical laborers employed in armories, other than those specified under (b), assistant engineers, expert laborers and firemen, not to exceed five dollars per day. (d) Laborers, other than those specified under (b) and (c), not to exceed four dollars per day. * * *

If the employees in question are to receive a maximum pay of $6 per day, they must qualify under subdivision (b) above. The question presented is, therefore, whether or not the armory of an ambulance company is "occupied as division or brigade headquarters or by a regiment, battalion, squadron, or similar organization, * * *." It does not appear to me that an ambulance company is a "similar organization" to a regiment, battalion or squadron. A regiment, battalion and squadron are all made up of more than one company.

My opinion is further based upon the fact that section 189 previous to this amendment and as previously amended by chapter 628 of the Laws of 1920 contained the following provision:

> * * * When employed in armories or arsenals housing or quartering brigade headquarters, regiments, battalions, squadrons, batteries, naval battalions, field hospitals, ambulance companies, or signal corps, armorers, janitors, electricians and engineers not to exceed six dollars per day; * * *

That provision was, I think, correctly construed in the letter to the Deputy County Treasurer of Onondaga county to which you refer.

I am, therefore, of the opinion that the employees in question come under subdivision (c) of section 189 as now in force. I might add that I have taken this matter up with the Armory Commission and their understanding is that the amendment intended to reduce salaries in small armories such as the one in question.

I enclose herewith copy of chapter 587 of the Laws of 1921.

Very truly yours,

CHARLES D. NEWTON,
Attorney-General.

(g) Railroad Police May Carry Revolvers Without License and Make Arrests Beyond Railroad Confines.

July 26, 1921.

MAJOR GEORGE F. CHANDLER, *Superintendent of Department of State Police, Albany, N. Y.*

DEAR SIR.— We acknowledge receipt of your letter of July 22nd enclosing letter from Murray E. Rector, which is herewith returned.

You ask for our construction of chapter 72 of the Laws of 1921, amending section 88 of the Railroad Law, relative to appointment, qualification and jurisdiction of railroad policemen. You particularly wish advice with regard to powers of such policemen to make an arrest outside of railroad property. The act reads in part as follows:

> * * * with all the powers of a policeman in cities and villages, for the preservation of order and of the public peace, and the arrest of all persons committing offenses upon the land or property of the corporation owning or operating such railroads; * * *.

We do not believe that this confines the power to make arrests on the land or property of the railroad corporation, provided the crime was committed upon the land or property of said corporation. Any other construction of the matter would seem to create a condition where such policemen could not carry out the purposes for which they were appointed. For instance, one of the commonest crimes committed upon railroads is that of breaking into and stealing from freight cars. These freight cars are often located at places where the railroad right-of-way is very narrow. To say that an arrest for such a crime must be confined to the exact right-of-way of the railroad corporation would, in our opinion, make this statute unworkable.

You also ask with regard to rights of such policemen to carry pistols etc. We enclose herewith copy of chapter 297 of the Laws of 1921, amending section 1897 of the Penal Law. You will note that subdivision 13 makes this section of the Penal Law inapplicable to policemen, peace officers, etc., and we are of the opinion that railroad policemen appointed by you under the provisions of section 88 of the Railroad Law are such officials.

Very truly yours,

CHARLES D. NEWTON,
Attorney-General.

(h) Fines for Violation of the Compulsory Education Law Apply to Support of Town Poor.

October 25, 1921.

HON. THOMAS COLBY, *County Treasurer, Schoharie, N. Y.*

DEAR SIR.— Your letter of October 19, 1921, requesting an opinion as to the disposition of a fine imposed for a violation of the Compulsory Education Law, paid into your office by the supervisor of the town of Wright, was duly received.

In reply, I beg to advise you that fines imposed for any violation of the Compulsory Education Law are to be disposed of by magistrates of your town in the same manner as fines imposed for the violation of other statutes generally, and the disposition of such fine is provided for in subdivision 21 of section 12 of the County Law, which reads as follows:

> 21. The board of supervisors shall have power to direct the payment by justices of the peace, of all fines and penalties imposed and received by them, to the supervisors of the respective towns, on the first Monday of each month, and to direct justices of the peace to make a verified report of all fines and penalties collected by them to the board of town auditors of their respective towns on the Tuesday preceding the annual town meeting. Upon such payment as herein prescribed to the supervisor of any town, he shall immediately pay over such part of such fines and penalties to any person or corporation who shall be entitled to receive the same by virtue of any statute, special or otherwise. The residue of such amount shall be applied to the support of the poor of such town. This subdivision shall not apply to the county of Kings.

As I write above, there is no statute, special or otherwise, that makes provision for the payment of the fine you mention to any person or corporation and, therefore, it is to be applied, according to the provisions of this subdivision quoted above, to the support of the poor of such town and its disposition is similar to that of other fines received at your office. The provisions contained in article 33 of the Education Law relating to the disposition of fines for the benefit of common schools, have no application to the fine received by you, mentioned in your letter.

Yours very truly,

CHARLES D. NEWTON,
Attorney-General.

ELEVENTH ANNUAL REPORT

OF THE

CONSERVATION COMMISSION

To the Legislature:

Pursuant to statute, the Conservation Commission begs to submit, for the consideration of your honorable body, a report of its work for the past year, as well as certain recommendations which it trusts will meet with your approval.

In the text of this report the discussion of the work of the Commission has been carried down to the end of the calendar year, December 31, 1921. Financial and other tables which are directly related to the fiscal year are, however, carried only to the end of the fiscal year, June 30, 1921. This method of preparing the report has been adopted because of the fact that the Legislature each year must consider many questions of conservation which require knowledge of the Commission's doings down to date, and not merely information that is already six months old.

Under the statute the work of the Commission is grouped into four divisions. This report accordingly considers each division in turn, preceding them, however, with a discussion of general topics. This is followed by the report of the Conservation Bureau of the Attorney General's office and the Annual Financial Statement of the Commission. The arrangement is as follows:

I. General Topics.
II. Division of Fish and Game.
III. Division of Lands and Forests.
IV. Division of State Reservation at Saratoga Springs.
V. Division of Waters.
VI. Conservation Bureau, Attorney General's Office.
VII. Financial Statement of the Conservation Commission.

GENERAL TOPICS

For the fiscal year ending June 30, 1921, the receipts of the Conservation Commission were the largest in its history.

During the six months ending December 31, 1921, as a result of statutory changes and various administrative economies, there was a decrease in expenditures and the appropriations for the coming year, except for an item for reforestation work, are reduced.

Since July 1, 1921, through cooperation with the Federal government and adjacent states, fire protection has been extended to new areas of forested land in the eastern, southern and southwestern portions of the State, until it includes more than ninety per cent of the State's entire area of forest land.

By the adoption of new apparatus for fighting forest fires the cost of this work has been reduced and greater protection given to the forests.

A bureau for the prevention of stream pollution has been organized, without the addition of any new employees, for the purpose of working out a practical plan for conserving the State's aquatic resources through the prevention of the pollution of the waters of the State by sewage and industrial wastes.

Continuation of experiments looking to the artificial propagation of oysters, during the year demonstrated the practicability of obtaining "sets" of oysters on artificial collectors on a scale that promises the rehabilitation of the State's declining oyster industry at very small cost.

During the year the Commission was represented at two important conservation conferences. The first of these, which met at Fairport, Iowa, on

June 8, had for its object the preparation of a practical plan for the conservation of the country's aquatic resources. The second met in Washington on June 16 to consider measures for the prevention of stream pollution and the protection of migratory fishes.

Nearly 25,000 acres have been added to the State's forest preserve, nearly all of which is of the virgin forest type.

Trespass upon the forest preserve during the year has been negligible, the cases being very few in number and trifling in amount, the total damage amounting to less than $200.

The State nursery at Saratoga has been increased in size until it is now the largest of its kind in the country, and contains nearly 19,000,000 trees for reforestation purposes. The inventory of stock in all the nurseries is 23,310,000 trees, an increase of 6,390,000 over a year ago.

In the work of checking the white pine blister rust which threatens the white pine industry of the entire country, 20,000 acres of land have been covered by employees of the Commission engaged in the eradication of currant and gooseberry bushes to prevent the spread of the rust.

A meeting of the Association of State Foresters was held in September, which was attended by foresters from every state having white pine forests, and by representatives of the United States Forest Service. Three days were devoted to a tour of the white pine forests in the northeastern part of the State and to a careful study of the effects of the disease and the methods used by this Commission to check it. The seriousness of the menace of the blister rust to the pine forests of the country was recognized by all, and the Commission's preventive methods approved.

In the development of the recreational possibilities of the Adirondacks, the Commission has built new open camps and established camp sites along the highways as far as the supply of ranger labor would permit, and has distributed approximately 100,000 recreation circulars showing the possibilities of the Forest Preserve as a playground and explaining its proper use.

By the use of improved methods in fighting fires, the losses from forest fires were held at a comparatively low figure, despite the fact that the season of 1921 up to the middle of September was the worst since the present fire protective system was organized.

As a result of a law enacted by the Legislature of 1921, the State Police were given the duties of game protectors and the regular force of protectors was reduced from 131 to 90. There has been the closest cooperation between this Commission and the Department of State Police during the six months that this law has been in effect, to thoroughly familiarize the troopers with the new duties, and to maintain an efficient enforcement of the game laws.

Because of a perfected organization and the greater efficiency of labor, it has been possible to administer the Saratoga Springs reservation with greater economy than during previous years, and there has been a constant increase in the patronage of the baths, this year's receipts exceeding those of any previous year. The results of the perfection of the system of operation were even more marked during the last six months of the calendar year than during the preceding twelve months covering the fiscal year.

By chapter 579 of the Laws of 1921, the Conservation Commissioner was made Chairman of the New York Water Power Commission. In addition to the Conservation Commissioner, this Commission consists of the State Engineer and Surveyor, the Attorney-General, the Temporary President of the Senate and the Speaker of the Assembly. It is empowered to issue licenses authorizing the diversion and use for power or other purposes of any of the waters in which the State has a proprietary right or interest. The law limits the term of a license to fifty years and provides that each license covering water power sites or lands, the title to which is vested in the State, shall require the payment by the licensee of an annual charge measured by a fair rental value thereof; and every license shall require the payment by the licensee of an annual charge for the purpose of reimbursing the State for the cost of administering the provisions of the law.

By chapter 499 of the Laws of 1921, the Conservation Commissioner is made a member of the Water Power Commission, which contains also the State Engineer and Surveyor and the Attorney-General, and upon the organization of this Commission was elected Chairman. This Commission administers the Conservation Law in relation to engineering and construction work, including river improvement, river regulation, drainage and water supply, and, under the act creating it, all engineering work in connection with these projects and jurisdiction over docks and dams is placed in the office of the State Engineer and Surveyor. This Commission takes over the work formerly in the Division of Waters in the Conservation Commission, and the employees of this division have been transferred to the office of the State Engineer and Surveyor.

TWO IMPORTANT CONFERENCES

Two important conferences were held in June that undertook the formulation of a practical and economical plan for the greater beneficial use of the aquatic resources of the entire country. The attendance at both was broadly representative, and the discussions emphasized the need of close cooperation among the states in dealing with a number of important conservation problems.

The Fairport Conservation Conference

State and governmental officials, university professors and practical business men were called in conference by Secretary of Commerce Herbert Hoover to discuss the question of conservation of resources of interior waters.

The conference, convened at the U. S. Fisheries Laboratory, Fairport, Iowa, June 8–10, met for the support of no pet project other than service of the common good. The topics for discussion related to the broad phases of the conservation of waters — the fisheries, navigation, forests, health. Discussion was focused not only upon those aspects of the problem which limit directly the abundance and purity of water for its legitimate uses, but which operate indirectly and in far-reaching ways to disturb the balance between the natural restoration of resources and the continued depletion or exhaustion of them by legitimate industries of conflicting group interests.

An excerpt from the announcement states:

> " Our water courses, lakes and ponds not only should serve as avenues of transportation and channels for removal of reservoirs for storage of surplus surface drainage, but also should continue to provide food and other necessities of life and to furnish the means of essential recreation. Yet it is evident that with growth in population and with progressive industrial development, the public waters are becoming decreasingly fit to serve these latter ends. It is important, then, to ascertain if the decline in usefulness of the waters is inevitable, and, if it is not, to discover and apply the means of bringing about improvement."

Problem of Fish Culture. Problems relating to the fisheries received the major share of attention. It was shown that the area of water in which fish may live is decreasing because of pollution, increased turbidity, increasing floods, deforestation, drainage projects, etc.; that intensive fish culture, which is the fish culture that must be considered now and in the future, should be founded upon a better knowledge of the biological balance existing in fishing areas of streams and lakes; crop estimates of the water, including both plants and animals, are essential facts to be learned; the effect of either the increase or decrease of the food supply and the fish population; the disturbance produced by pollution.

In the matter of fresh water shell fisheries, the present status of the pearl button industry of the middle west reflects in a striking way the effects of the decline of an abundant natural resource within a single generation. Large mussel beds formerly occupied the main stream of the Mississippi River. They are found now in quantity only within limited areas of its tributaries. This industry, which utilizes the mussel for buttons, is vitally interested in remedial conservation measures which will not only restore the mussel beds but increase the number of fish in the streams, the fish being essential to the propagation of the young mussel (glochidium) which, as an obligate parasite, passes its early stages of growth on the gills of fish.

Better Coordination of Effort Needed. In a letter to the conference, the practical measures now under way in the New York State Conservation Commission for the better conservation of our aquatic resources were outlined and the need of better coordination of effort pointed out. Such problems were the preservation of natural forests and reforestation to protect the headwaters of streams and to regulate the flow of rivers; the problems of pollution of lakes, rivers and streams by sewage and industrial wastes, each demanding study and investigation of the effect upon the health of the people and upon the fish life; the utilization of artificial methods in fish propagation to augment the decreasing natural supply of game and market fish; recreational and educational projects.

The conference afforded opportunity for interchange of ideas among persons interested in aquatic resources from different points of view. It did not unfortunately formulate any plans of procedure which may be immediately followed to further progress in conserving resources of interior waters. Various resolutions, however, were adopted urging union of effort to secure adoption of appropriate conservation measures, the reconciliation of conflicting group interests, the promotion of a trained personnel to prosecute investigations, and the direction of a campaign of education to help solve the problem of ignorance and indifference to conservation measures.

Pollution and Fishery Problems

The conference at Washington, D. C., on June 16, 1921, called by Secretary Hoover to consider measures for the prevention of pollution and other conservation measures relating to the fisheries, emphasized the importance of this problem to the Atlantic States. The interests represented at the conference are classified as follows:

Representatives	
1	Secretary of Commerce
5	U. S. Bureau of Fisheries
2	U. S. Public Health Service
1	U. S. Army Engineers
1	U. S. Bureau of Navigation
1	U. S. Bureau of Chemistry
3	Senators from New Jersey and Virginia in person, and South Carolina by secretary
9	Congressmen from Maine, New Jersey, Maryland, Virginia, California, and Ohio
15	State Commissions from Maine to Louisiana
25	Fishing industries (producers)
8	Associations — commercial, fish and game, and anglers
3	Fishery publications
Total 72	

The morning session was devoted to the consideration of water pollution. The Senator from New Jersey spoke on the great importance of oil waste as affecting fire hazard and damage to shore property and bathing beaches, as well as its relation to fisheries. The Surgeon-General of the U. S. Public Health Service described pollution investigations made by the Federal Government, and the Chief of Engineers of the U. S. Army defined the jurisdiction of the Army Engineers over navigable waters. Representatives from the State commissions confirmed the evils of pollution in their respective states, but few as yet had taken active measures toward its prevention. Producers recognized pollution as the greatest menace facing the fishing industries today, and conservationists from the various associations strongly urged Federal action. Tersely summing up these opinions, Secretary Hoover appointed a committee to shape appropriate resolutions.

Since New York State has been recognized as the leader in constructive measures for the prevention of stream pollution, the letter addressed to the Conference from this Commission was received as a guide for future effort and is, therefore, included here:

"The great popular interest in the subject of pollution of waters, and the recent official activity in considering measures of prevention, have brought many requests to the Conservation Commission which has been a pioneer in this phase of water conservation. When it is considered that water of suitable quality is required in every field of human activity and is vital to life itself, popular interest in public waters seems entirely natural. When it is further considered that this used water must be returned into natural drainage channels as waste, under the simple term "pollution," it is not strange that much confusion has existed in consideration of such a complicated problem. It must be recognized at the outset that the conservation of the quality of water is a united problem broader than any of the special interests involved, requiring the deepest consideration of economic, egal and scientific principles.

"The Conservation Commission of New York State has enjoyed a unique position n its approach to the problem of the conservation of waters. Having broad urisdiction not only over such quantitative regulation as stream flow, drainage, etc., the Commission has also been entrusted with the enforcement of laws for the protection of fish life, and has held joint jurisdiction with the State Board of Health in issuing sewerage permits, approving water supply applications, and in the control over the sanitary quality of shellfish. It is perhaps the first public body to approach the problem of water pollution as a problem in the conservation of the quality of water as a natural resource, and as a result of its investigations has reached the conclusion that the greatest need at the present time is some workable plan for coordinating effectively the efforts of all the interests nvolved."

Following the reading of this letter a few remarks were made, telling the history, ideals, administrative program, organization and results of the work in New York State. It is but fair to say that this work is more considerable than that done by any other single state.

The afternoon session was opened by the Secretary to consider other measures for improving fishing conditions of the Atlantic States and to determine how far the Federal government could act in such beneficial service. A great deal of discussion arose regarding the Federal regulation of the fisheries. Although all welcomed the useful offices of the Federal government in preventing pollution such as oil wastes, discharged from oil-burning steamers, both the state commissions and the industries declined to endorse any suggestion of Federal regulation of the fisheries. Where conflicting laws interfered with the broader problem of conservation of a fishery involving several states, it was the opinion of the conference that the Secretary of Commerce could, by calling together the representatives of the states concerned, formulate consistent legislation for recommendation to the various states.

The following resolutions were adopted at the evening session:

"WHEREAS, At the conference of State Fish Commissioners, fish producers and anglers of the Atlantic and Gulf Coasts called by the Secretary of Commerce on June 16, 1921, the men from all the States represented gave full consideration to the pollution problems confronting the fisheries and the question of federal control of fishing operations — the following resolution was unanimously adopted as the concrete expression of the conference:

"*Be it resolved.* That the pollution of our waters by trade waste of all kinds, raw sewage and all other substance deleterious to the aquatic life, and particularly oil pollution from the oil stations and refineries and the discharge from small and arge oil using and carrying vessels is the most vital problem generally affecting our fisheries for food fish, shellfish and crustaceans, and

"*Resolved,* That unless these conditions are promptly remedied our shore isheries at least will steadily decline and in a few years be almost altogether ruined.

"*We therefore urge* immediate work by the Department of Commerce in investigating conditions in the producing districts and the prompt passage of remedial egislation by Congress, and

"*Be it further resolved,* That on the question of general Federal control of the migratory fishes we make the following recommendation:

"That the Department of Commerce call from time to time conferences with the governors of various states in conjunction with the state fish commissioner with the view of suggesting uniform legislation by the various states for the protection of such varieties of migratory fish as may be threatened with extinction through pollution or any other causes."

Upon further suggestions being requested, the representative from New York State expressed the opinion that other agencies should be recognized in the attack upon stream pollution and that some effort should be made to coordinate these agencies. Surgeon-General Frost of the U. S. Public Health Service endorsed this suggestion, stating that the work of the Service was of fundamental nature and of general value in all pollution studies.

After considering the steps that had been taken to improve the serious transportation problem which is of such importance to the fishing industries, the Secretary thanked the representatives and adjourned the conference.

It appears, therefore, that in taking up investigations on pollution, the New York State Conservation Commission has maintained its progressive position as leader in conservation. It may be further inferred that the results of this work have been influential in bringing about the conference As a result definite steps will be taken to prevent oil wastes and a basis of cooperation between the states and the Federal government is promised.

STREAM POLLUTION STUDIES

Bureau of Prevention of Stream Pollution. In 1919 the Legislature directed the Commission to make certain studies with regard to the pollution of streams as affecting water supplies and fish life. Appropriations for this purpose have been made from time to time since then. Work was immediately started and has been carried on continuously. After the reorganization of the Commission on July 1, 1921, it became necessary, in order that this work could be concentrated and economically directed, to put it in the charge of a special bureau. The Bureau of Prevention of Stream Pollution was, therefore, constituted July 19, 1921. Russell Suter, Senior assistant engineer, formerly in charge of water supply and sewerage matters, was placed in charge; assisted by William Firth Wells, Biologist and Sanitarian and Emmeline Moore, Ph.D., Investigator in Fish Culture. This bureau has continued previous studies since that time. Work has been directed along the following lines:

Limits of Tolerance of Fish to Wastes. All available information on this subject has been collected, tabulated and is published in this report. These figures will serve as a guide, not only to the game protector in determining whether the law is being violated, but also to the plant owner and plant engineer in fixing on the site for a factory, or in determining what treatment, if any, must be given to the wastes.

Biologic Indicators of Pollution. To assist game protectors and interested citizens in determining whether pollution by organic wastes is of such intensity as actually to injure fish, a study has been made of the plant and animal forms which, if found in a stream, would indicate such a condition.

Skaneateles Outlet. Complaint having been made to the Commission that the fishing in Skaneateles Outlet had been ruined by pollution from mills this stream has been studied. A report on the findings is in progress.

Artificial Propagation of Oysters. Studies made in previous years on the artificial propagation of oysters have been continued with a view to settling on the details of a commercially practical oyster hatchery. Studies have also been made of the possibility by improved methods of spat collection of saving the oyster " set " naturally available.

Oyster Purification. The method of purifying contaminated oysters successfully developed in 1920 has been put into actual use. Oysters thus purified have been sold and a permanent plant for the use of this method is under construction. By the time this report is printed it is probable that this plant will be complete and will have been duly licensed by the Commission.

LIVING INDICATORS OF INTENSITY OF STREAM POLLUTION

Pollution of a stream by sewage and other organic wastes may injure fish by removal of the gaseous oxygen dissolved in the water. This dissolved oxygen is as necessary to fish as is the oxygen of the air to the ordinary air breathing animal — without it the fish suffocate. By measuring the reduction in the amount of this oxygen, the harm done by the pollution can be determined. Such measurement can easily be made by a chemist, but for the ordinary person some other simpler method of getting this information is required. Certain common and easily recognized water plants and animals show quite accurately the dissolved oxygen content of the water and can be considered as indicators of the degree of pollution of a stream. Without attempting to write a scientific treatise about them, these living indicators are described and figured in the following pages. It is hoped that this information will enable any one to form an intelligent opinion as to the damage that may be caused in a given stream by the discharge into it of sewage or organic waste matter.

Water in a state of chemical purity does not exist in nature. Water flowing in any stream carries in solution certain salts, gases and other compounds and frequently various matters in suspension. Only by the presence of these materials can aquatic life exist and that life itself, as it is not water, is itself pollution. It follows that pollution is always a relative term and for purposes of legislation and legal action a measure of the pollution must be established.

The Conservation Law of the State of New York prohibits the discharge into a stream of wastes if injurious to fish life inhabiting the stream or injurious to the propagation of fish in the stream. No amount of extraneous matter, which does not in fact injure fish, is pollution of the class prohibited by statute.

Pollution may actually kill fish at some stage of development; drive them away, suffocate. starve, prevent them from spawning or from migrating; it may be harmful to some species of fish and not to others and it may have all these effects in any degree of gravity. It may affect but a small area, or many miles in the length of a stream. Intensity of pollution, extent of the affected area and the habits of the fish normal to the stream must all be considered.

Polluting Materials. Polluting materials are conveniently divided into two classes: first, those which kill fish by direct poisoning — chemicals, gas wastes and the like; second, organic wastes which by decomposition absorb the dissolved oxygen — sewage, milk plant, canning factory and similar wastes. The first class has been considered elsewhere and certain standards with regard to them set forth. The second class is more particularly considered in these pages.

Fish themselves are not always the best indicators of the condition of a stream. Some fish are migratory, all are mobile and all have considerable ability to keep out of sight. Failure to catch fish does not prove that a condition of serious pollution exists. Absence, real or apparent, may be explained by over-fishing, invisibility, failure to take the hook, or the fish may have gone elsewhere on their own affairs and not on account of pollution. If fish placed in the polluted stream die at once, it may be presumed that the law has been violated; but ability of the fish to live, coupled with failure to find fish, requires further proof of adverse conditions. This proof may be afforded by a study of the natural stream conditon and of the smaller animal and vegetable aquatic life present. These small animals and plants either cannot move or cannot move far, so that they show the average stream condition better than do the more active fish.

Gill-breathing aquatic animals require oxygen to be dissolved in the water that they may live. This oxygen is not that which enters into the composition of the water itself to make the familiar chemical formula H_2O. It is gaseous oxygen, similar to that of the atmosphere, held in solution in the water. Dissolved oxygen is also necessary for the life of many aquatic plants. Much of this oxygen is absorbed directly from the atmosphere, especially in riffles and water falls — much of it is given off by green aquatic plants.

Knowledge of the way in which plants and animals breathe is required before the relation between organic pollution and the oxygen dissolved in the water clearly can be understood. Plants and animals are somewhat dependent on each other in this respect, as is shown by the well-known " balanced aquarium."

Green plants alone can live on strictly inorganic substances. They require for life: water, salts — like saltpeter, lime, etc.— carbon dioxide gas and sunlight. By virtue of the action of sunlight on the green coloring matter of the plant, the constituents of the carbon dioxide are separated, the carbon combined with water and other materials to make plant substance and the oxygen returned to the surrounding air or water. Thus all vegetable matter is deficient in oxygen, as is clearly shown by the fact that it will burn either rapidly as in a fire, or slowly as in the tissues of an animal.

Animals cannot utilize solar energy directly in their life processes and cannot live on inorganic material alone. Energy for aimal life is obtained by the oxidation of organic material, either plant substance or animal flesh which was primarily built up from plant substance. The ultimate requirements for animal life are water, oxygen and plant substance. The food material is burned and finally returned to the earth, air or stream as water mineral salts and carbon dioxide; materials which by solar energy can again be converted into plants.

Dead organic matter must be oxidized back into its original constituents before it can again serve as food for green plants. This action is finally brought about by the non-green plants — fungi, molds, etc.— and by the bacteria. The process requires oxygen and gives up carbon dioxide, water and minerals. Decomposition of organic waste matter in a stream absorbs the oxygen in the water and, until the process is completed, the water will contain less than the usual amount of oxygen. It takes time for decomposition processes to become active and only a definite quantity of oxygen can be absorbed by a given amount of waste, so the condition of serious pollution may be developed only at some distance below the point of entry of the waste and will continue only for a definite distance. A small volume of waste in a large stream will not exhaust the dissolved oxygen and there will be fairly quick return to normal conditions. If the proportion of waste to water is high, there may be complete exhaustion of the oxygen and slow recovery. In this last case certain bacteria break up some of the material present without oxidizing it, producing foul smelling gases and creating a nuisance. This condition is called "septic" and a septic stream can support no animal or plant life that requires dissolved oxygen for respiration. It can support bacteria and air-breathing aquatic animals, such as rat-tail maggots. All smelly streams, however, are not septic.

Plant Foods. Plant foods are produced by the breaking up of organic material. Plants are the starting point for all animal foods. It follows that in the long run the pollution of a stream with organic material may be beneficial to fish and other aquatic life. It amounts to fertilization of the stream and no life can exist in it unless such pollution is present in some measure. Nevertheless, this pollution must be kept within strict bounds or it will cause widespread destruction.

Water varies in its power to absorb gaseous oxygen according to its temperature, cold water having a much greater absorptive capacity than warm water, as shown by the following tabulation:

Temperature F.	Maximum oxygen which can be absorbed · parts per million.
32°	15
50°	11.5
70°	9
90°	7.5

Fish Requirements. Fish requirements for dissolved oxygen vary with the species of the fish and the age of the individual. It has been said by one authority that few fish are found when the oxygen saturation is below 50 per cent and none where it is below 30 per cent. These figures are perhaps high. for fish have been known to live where the dissolved oxygen was 1.5 parts per million, probably less than 20 per cent saturation. Conditions favorable for the growth of fungi would tend also to favor the various fungus diseases to which fish are subject. Fish eggs deposited in organic sludge or in the zone of fungus growth would be destroyed in a short time.

A stream polluted by organic wastes can be conveniently divided into three zones: zone of recent pollution, septic zone, and zone of recovery. Typical indicators of these three zones are, respectively: water fungi, rat-tail maggots, and bloodworms. There is no hard and fast line of demarcation between these zones and only a portion of the middle zone may be truly septic. The upper limit of the second and the lower limit of the other two corresponds approximately with 40 per cent saturation of oxygen, or about 3.5 parts per million at summer temperatures. If the volume of waste is great, all these zones will be found and the two last may extend over many miles. With a lesser volume of waste, the middle zone may not be found. A still smaller intensity of pollution may curtail or eliminate the last zone. Slight pollution may fail even to give the first, except perhaps over a small patch of stream bed. Fish can live in the first zone and not infrequently are found there. They can also live in the third zone. If the second zone is present, there is good reason to believe that fish are injuriously affected. Although they might be able to penetrate for a short distance into that zone, they probably would not stay there, and certainly fish spawn could not develop in any such location. A septic stretch of stream would seem to be an effectual bar to the migration of fish up and down the stream.

Zone of Recent Pollution. Where an organic waste enters a stream, it may at first merely cause turbidity. The organic material may still be fresh and it frequently is relished by fish, which, therefore, frequent the vicinity of the outfall. As decomposition processes become established, the typical water fungi appear. These form in dense masses, covering the stones of the bottom and clinging to submerged sticks and plants. In still water they may be in bulbous form, like summer clouds; where there is more current the masses are more shaggy or fleecy with jagged edges and points swaying in the current. Fragments are frequently detached by the current and carried downstream into the lower zones. While submerged, these plants have somewhat the appearance of cotton wool, although made up of gelatinous threads. The newly developed forms are frequently white, but the older parts tend towards an olive green or " putty " gray color, turning to a rusty brown in the oldest portions. These fungi feed on and distintegrate waste material and absorb oxygen. They persist until the oxygen saturation is pulled down to about 45 per cent, 4 parts per million at summer temperatures, when they die and in turn support the lower forms of fungo-bacteria. Near the lower limit of this zone, tubifex worms appear, working in the sludge, made up of wastes and decomposing fungi. Green plants are found in this zone, the larger and more highly organized forms in the upper portion giving place to smaller and lower forms, which finally become microscopic in size and visible only in masses. These last disappear as the lower limit is reached.

Septic Zone. Fungus life in its lowest forms is plentiful at first, somewhat similar in appearance to that of the first zone, but having a more distinctly thread-like structure and tending to cream, pink or gray coloration, which may become very dark. Tubifex worms disappear and are replaced by the larvae of the sewage fly and the rat-tail maggot. As the oxygen continues to be absorbed the water molds disappear, but may again recur if an intervening riffle reoxygenates the water. Pools may become really septic, with no oxygen, black deposits and evolution of foul-smelling gases. Rat-tail maggots are found all through this zone, except perhaps in the most septic parts. Green plants are absent, except where the microscopic forms start the work of regeneration at the lower end. Throughout this zone there is an accumulation of sludge, forming a pollution carpet, the condition of which as to oxygen is worse than that of the water. Fish may penetrate the upper and lower limits, but cannot live where conditions are the worst. At the end of this zone, where the work of decomposition and oxygen absorption is nearly completed, green plants start to appear and reoxygenate the water.

Zone of Recovery. Here there is usually an accumulation of sludge brought down from above, but it is usually brown rather than black. In this sludge the bloodworm, typical of this zone, flourishes. Tubifex may be found at the upper end. Green plants multiply and eventually the water becomes reoxygenated and the clean water forms re-established. Certain fish, such as the sucker, stone roller, creek chub and shiner, are found in this zone, growing fat on bloodworms and on the bottom sludge. Game fish probably penetrate it from below in pursuit of these smaller fish and also eat bloodworms which are washed down into the lower reaches. The lower limit of this zone is marked by the increase in green plants, such as brook silks, mosses, water nets and tolerant rooted plants, which are powerful oxydizers of the water.

Clean Water Forms. Plants growing in clean water are markedly green and frequently of more highly organized types than those in the polluted sections. Animal life tends to be more active and highly organized. Typical forms of plants and animals which will not inhabit the polluted waters are shown in the figures.

Tolerant Forms. Some species of plants and animals are of litle value as indicators of pollution because they are found in both clean and polluted waters. Snails, black fly larvae, water boatmen and similar forms have a wide range and therefore are not good guides to water condition, except to the scientist who can distinguish between the different species of these animals.

Summary. Indicators of pollution may be summed up thus:

Water molds and scums, particularly if of colors other than green, indicate decreasing oxygen — conditions are not favorable and may be worse downstream.

Tubifex marks approximately the limit of fish life.

Rat-tail maggots, if abundant over the whole bed of the stream, are an almost certain indication of prohibited pollution.

Bloodworms indicate recovery and conversion of wastes into fish food.

Green plants, mosses, silks and nets usually indicate good and improving conditions.

These biological indicators of the oxygen condition of a stream and of its availability for fish life, we feel, will be of material aid in determining the harm, if any, done by a given case of pollution. They are aids only. A solitary fragment of sewage fungus does not indicate wholesale destruction of fish life. An evil odor about a polluted stream may come from the factory and not from the wastes which it discharges into the stream. The finding of a few rat-tail maggots in an eddy does not indicate that the whole stream is septic and therefore a bar to fish migration. In the study of stream pollution, as in most other departments of life, an open mind and a little common sense are most valuable assets.

ESSENTIAL REQUIREMENTS OF FISH

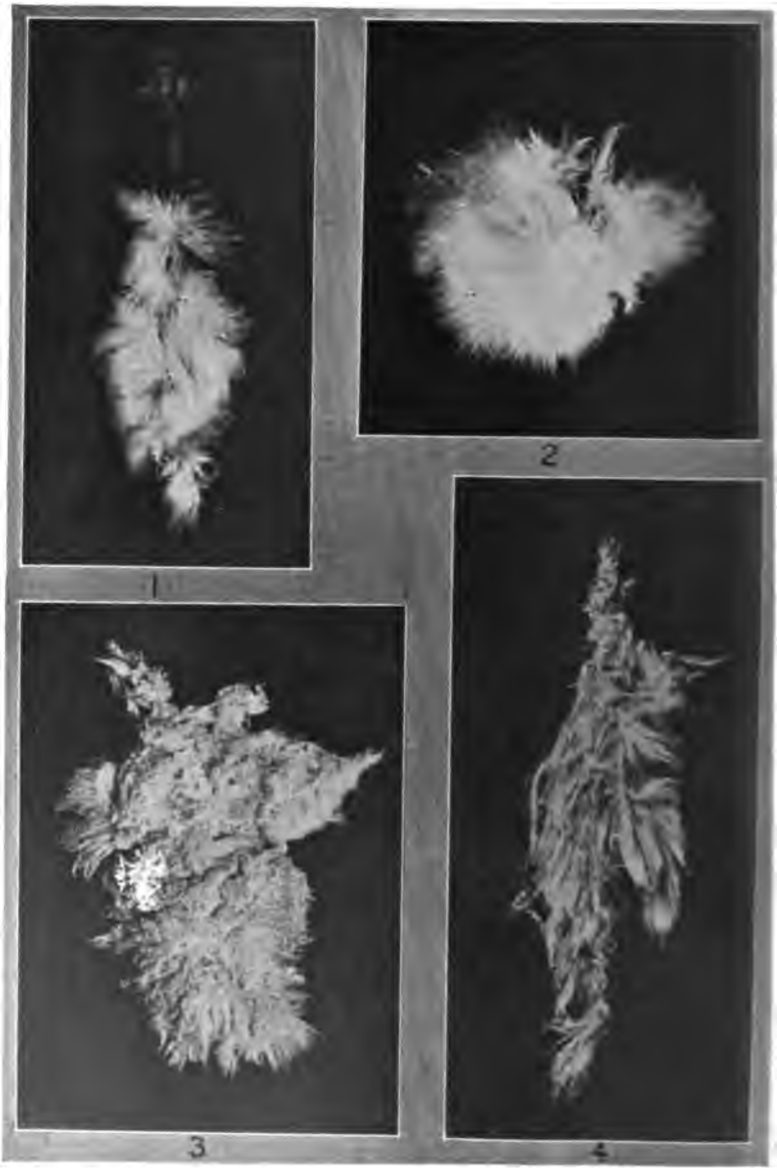
NAME	Oxygen	Food	Spawning
Brook trout	High	All floating animals	October to January in clean gravel in shallows. Migratory.
Landlocked salmon	High	All floating animals	October to January in clean gravel in shallows. Migratory.
Smallmouth bass	High	All floating animals	May to July on clean gravel.
Largemouth bass	Medium	All floating animals	May to July in clear places.
Yellow perch	High	All floating animals	March and April on water plants.
Sunfish or pumpkin seed	Medium	Animals afloat and on weeds and stones	Summer in hollows in shallows along shore
Bullhead	Medium	Animals afloat and on bottom, some plants.	May to July on clean sand and stones.
Minnows			
Stone roller	Low	Some sludge and life therein	Spring and summer, clean sand and gravel.
Shiner	Low	Some sludge and life therein	Spring and summer, clean sand and gravel.
Creek chub	Low	Some sludge and life therein	Spring and summer, clean sand and gravel.
Sucker	Low	Sludge and anything in it	April and May; eggs are scattered.

EXPLANATION OF PLATES

Oxygen saturations were determined at temperatures near 70° F.

For assistance in identifying troublesome species acknowledgments are due various staff members at the N. Y. State Museum, Philadelphia Academy of Sciences, Illinois Natural History Survey, Cornell University and N. Y. Botanical Garden.

PLATE I.



SEWAGE FUNGI.

1. Thiothrix.
2. Saprolegnia.
3. Leptomitus.
4. Sphaerotilus.

PLATE I.

SEWAGE FUNGI (WATER MOLDS)

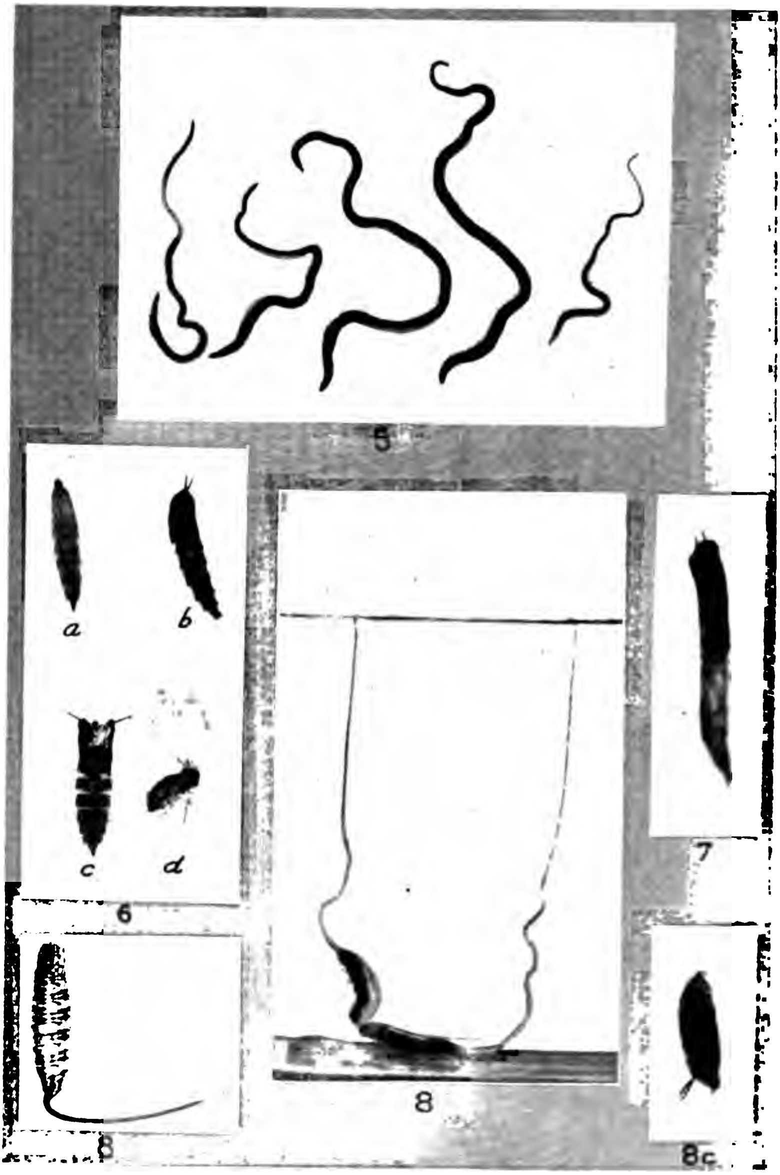
Figure 1. ***Thiothrix* sp.** A fungo-bacterium, common in streams highly polluted by milk condensery wastes; cream colored or pinkish, composed of minute filaments or threads held together by gelatinous sheaths: found chiefly in the slightly oxygenated riffles between septic pools. Oxygen requirements 50 to 30% saturation. About half natural size.

Figure 2. ***Saprolegnia* sp.** A water mold developing from whey wastes. A whitish cottony growth often grey, composed of coarser filaments and possessing a highly glazed appearance, covering all surfaces with a thick cottony felt. Oxygen requirements 60 to 50%. About half natural size.

Figure 3. ***Leptomitus lacteus,*** Agardh. A greyish mold resembling fine merino wool, but composed of finer threads; common among growths resulting from the discharge of sewage and wastes from milk plants. Oxygen requirements 70 to 45%. About half natural size.

Figure 4. ***Sphaerotilus natans,*** Kutz. Common at sewer outfalls; color varies from nearly pure white to gray, with yellowish or reddish tinge; clings to stones, sticks, algae, etc. Oxygen requirements from 70 to 50% saturation. About natural size.

PLATE II.



ANIMALS OF THE SEPTIC ZONE.

5. Sludge worms.
6. Sewage-fly at various stages.
7. Sewage crane-fly.
8a. **Rat-tail maggot — feeding position.**
8b. **Rat-tail maggot — larva.**
8c. **Rat-tail maggot — pupa.**

PLATE II.

ANIMALS OF THE SEPTIC ZONE.

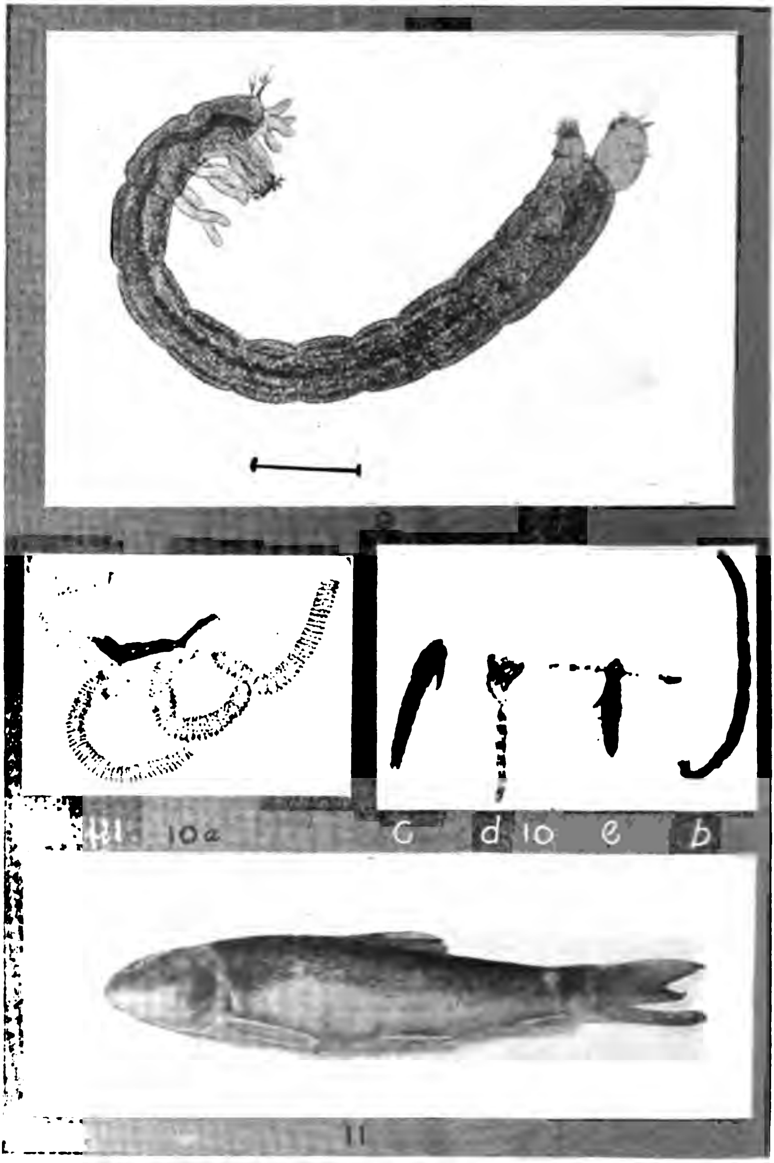
Figure 5. Sludge worms or slime worms (*Tubifex tubifex*). A relative of the earth worm; recognized by red color and spiral motion. This motion of the worm or a group of them waving back and forth in unison adapts them to a life in the water with a minimum supply of oxygen. Usually found associated in large numbers in the depressions of ooze or soft mud along the edges of septic pools, or at the bottom in the transition zone. Oxygen requirements 70 to 15%. Magnified about three times.

Figure 6. Sewage-fly. (*Psychoda alternata*, Say). A small fly breeding in putrid masses or clinging to sewage fungi floating in the current. (a) larva; (b) pupa; (c) empty pupa case; (d) adult, a gray, hairy moth-like fly of slow movements, often seen hovering under projecting structures near the stream. Magnified about four times.

Figure 7. Sewage crane-fly (*Erioptera sp.*) Pupa. Found in about the same situation as the sewage fly. Magnified about three times.

Figure 8. Rat-tail maggot (*Eristalis tenax*, Linn). (a) Maggot in natural position securing air through extended tail. Natural size; (b) Larva. Extensible air-tube, the " rat-tail," permits it to secure air from the surface when immersed in a nearly oxygen free substratum. Larva is whitish and slightly transparent. It frequently may be observed floating on the surface of disturbed pools, or among putrid debris lodged about stones. Normally the body is buried in mud with tail extending through surface film to the air. Figure shows tail telescoped. Adult fly is bee-like and may be seen about the most septic places depositing eggs in mud near edge of water. Slightly magnified; (c) Pupa. Found in mud alongside pools. Body dark and smooth; " tail " usually dissolved. Oxygen requirements 40 to 0%. Slightly magnified.

PLATE III.



ANIMALS OF THE ZONE OF RECOVERY.

9. Bloodworm — larva.
10a. Bloodworm — eggs.
10b-e. Bloodworm — life stages.
11. Sucker — fingerling.

PLATE III

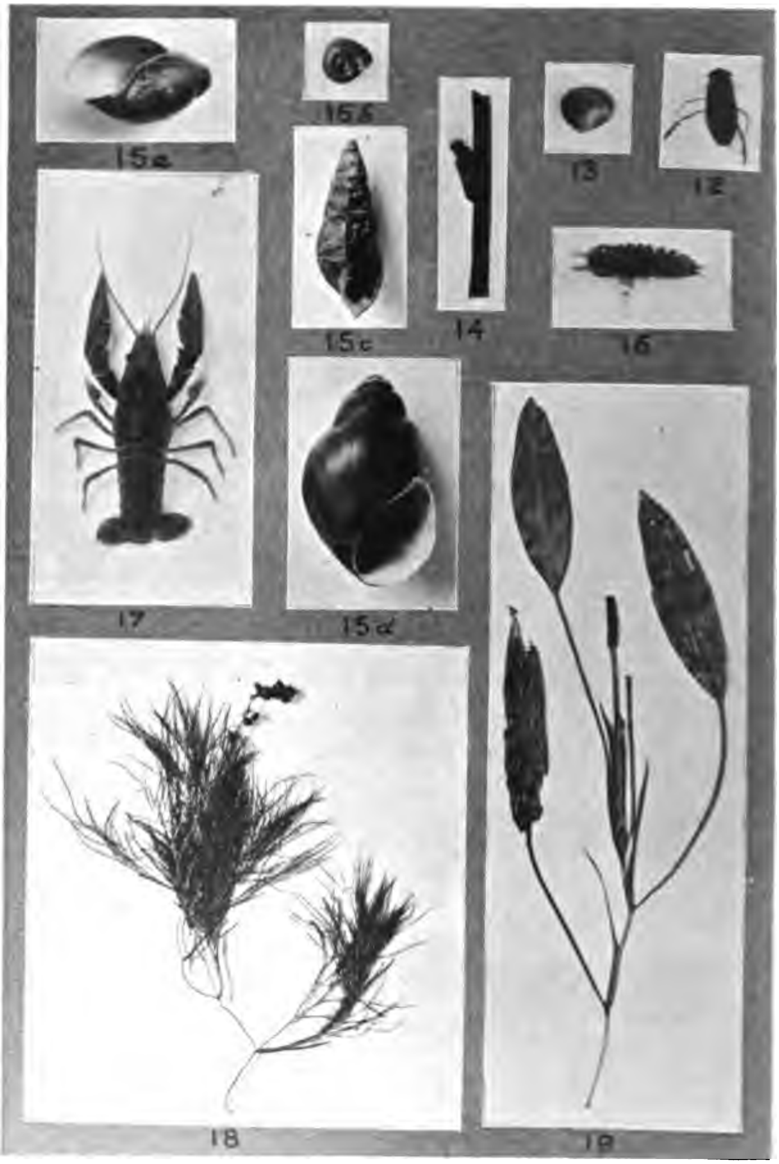
ANIMALS OF THE ZONE OF RECOVERY

Figure 9. Bloodworm (*Chironomus decorus*, Johann). Larva. Highly magnified. Copy from Vol. X, Mass. Inst. Tech. 1917.

Figure 10. Bloodworm. (a) Eggs. Brownish gelatinous masses, generally attached to objects in the riffles; (b) Larva. Blood-red in color, occupies a tube formed in the sludge; (c) Pupa; (d) Empty pupa case; (e) Adult midge. Usually seen hovering about the riffles, depositing eggs in the water just beneath the surface. Adult form is about the size and general appearance of a mosquito. Larvae live in tubes of their own construction, formed of sludge substance glued together by the animal. Tubes are frequently heaped upon each other. There is an opening at the top, a round chimney hole, about the size of a steel knitting needle. Oxygen requirements 70 to 50%. Magnified about two times.

Figure 11. Common sucker (*Catostomus commersonii*, Lace). A sludge feeder which frequents the bloodworm zone. A fingerling of the second season. About three-fourths natural size.

PLATE IV.



TOLERANT FORMS.

12. Water boatman.
13. Pea clam.
14. Black fly.
15. Snails.
16. Sow bug.
17. Crayfish.
18. Sago pondweed.
19. Swift water pondweed.

PLATE IV.

TOLERANT FORMS.

Figure 12. Water boatman (*Arctocorixa*). A bug which carries its air supply in a bubble behind and may penetrate contaminated regions. Slightly magnified.

Figure 13. Pea clam (*Pisidium abditum,* Hald). A mollusk which attaches itself to plants carrying sludge accumulations. Thrives in waters polluted by domestic sewage. Slightly magnified.

Figure 14. Black fly (*Simulium venustum,* Say) Pupa. Attached to a leaf. Found where the current is swift. Slightly magnified.

Figure 15. Snails: (a) *Physa heterostropha,* Say. An air breather. May be found in septic regions. Secures air by crawling upside down on water surface. Slightly magnified. (b) *Planorbis parvus,* Say. An air breather, tolerant of conditions near sewer outfalls. Slightly magnified. (c) *Goniobasis virginica,* GM. A water breather. Natural size. (d) *Campeloma decisum,* Say. About natural size.

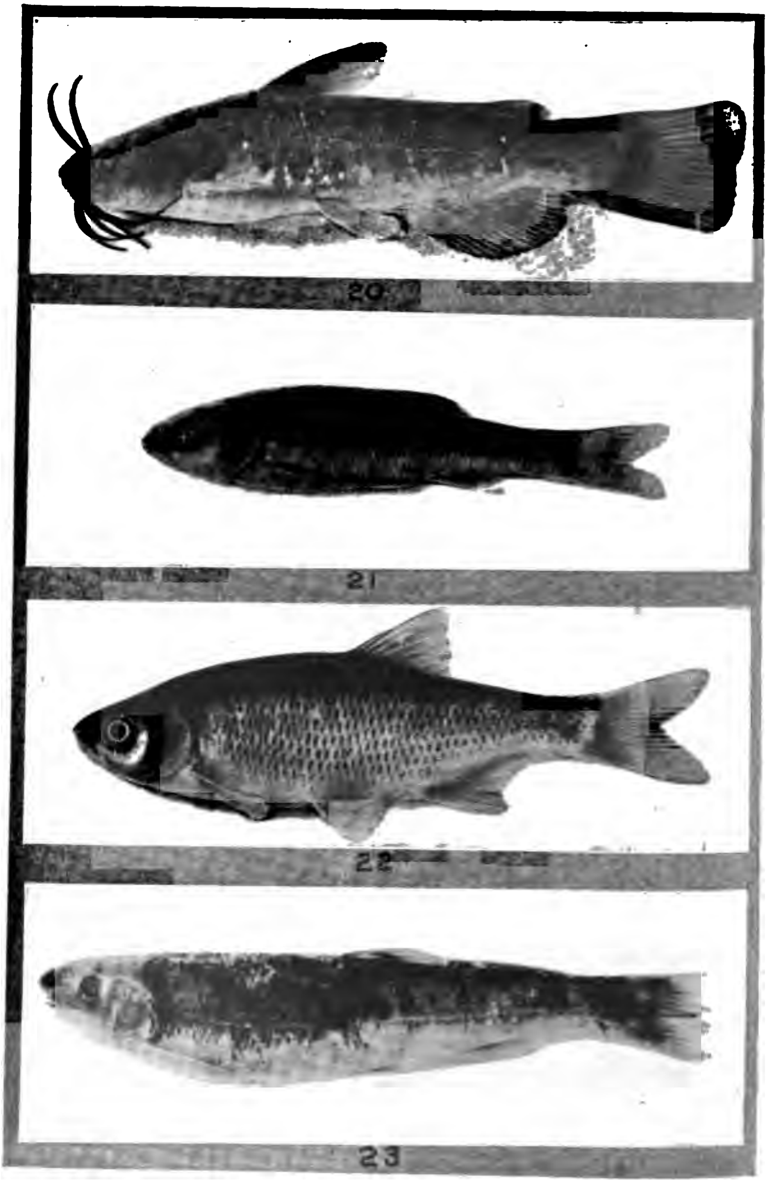
Figure 16. Sow bug (*Asellus communis,* Say). A scavenger; frequents muddy places. Slightly magnified.

Figure 17. Crayfish (*Cambarus immunis,* Hagen). A scavenger which has been found in large numbers in waters recovering from sewage pollution. About one-fourth natural size.

Figure 18. Sago pondweed (*Potamogeton pectinatus,* L). Common where there is running water and a muddy bottom. About one-fourth natural size, but variable.

Figure 19. Swift water pondweed (*Potamogeton americanus,* C & S). About one-fourth natural size.

PLATE V.



TOLERANT FISHES — FINGERLINGS.

20. Bullhead. 22. Golden shiner.
21. Creek chub. 23. Stone roller.

PLATE V.

TOLERANT FISHES.

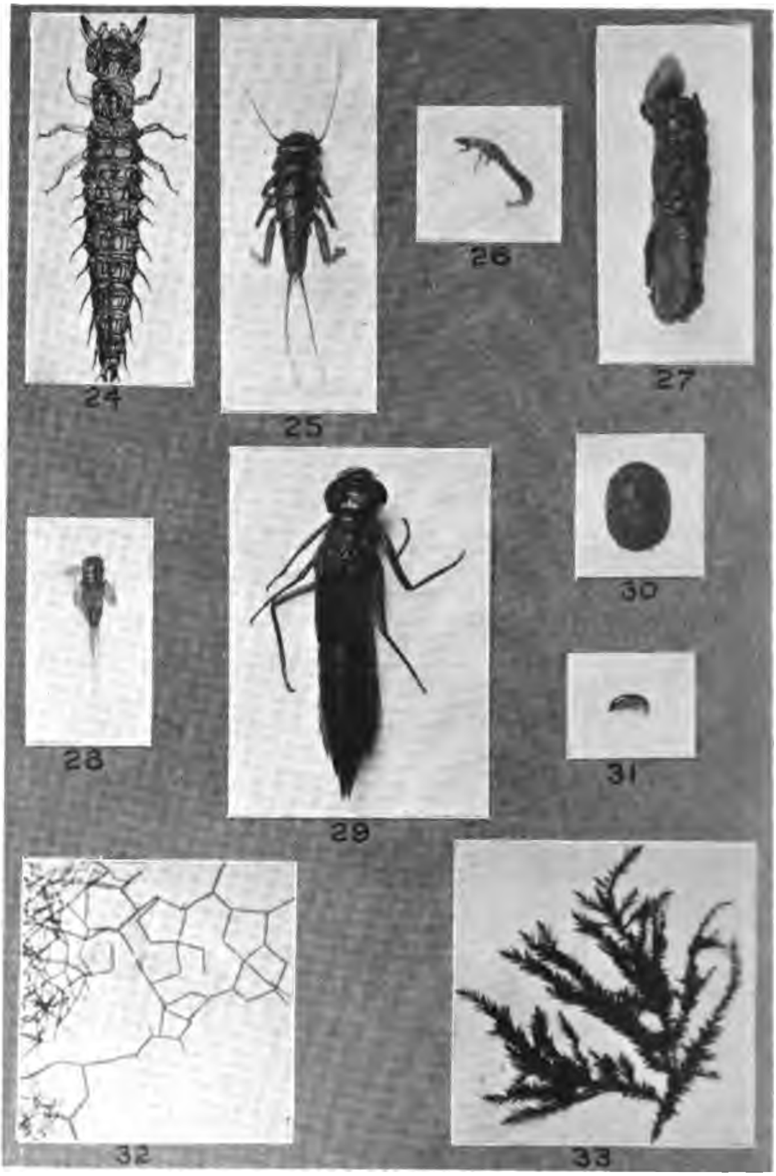
Figure 20. Bullhead or horned pout (*Ameiurus nebulosus*, Les). Fingerling about three and one-half months old. Natural size.

Figure 21. Horned dace or creek club (*Semotilus atromaculatus*, Mitch). A fingerling of the first season. Natural size.

Figure 22. Golden shiner (*Abramis crysoleucas*, Mitch). A fingerling of the second season. About three-fourths natural size.

Figure 23. Stone roller (*Campostoma anomalum*, Ref). A fingerling of the second season.

PLATE VI..



CLEAN WATER FORMS.

24. Dobson.
25. Stonefly.
26. Caddisworm.
27. Caddisworm case.
28. Mayfly.
29. Dragonfly.
30. Water penny.
31. Scud.
32. Water net.
33. Water moss.

PLATE VI.

CLEAN WATER FORMS.

Figure 24. Dobson or "Helgramite" (*Corydalis cornuta,* Linn). Larva. Three to nine inches long. Under or around stones in swift water. Copy from N. Y. Museum Bulletin, No. 47.

Figure 25. Stonefly (*Perla sp.*) Nymph. Under and around stones in swift water; very flat body with two tails. Slightly magnified.

Figure 26. Caddisworn (*Hydropsyche sp.*) Larva of the caddisfly. Several species with various habits and forms; in swift waters mostly. Under stones in loosely constructed pebble and webbing cases; attached to stones on the lee side of the current in compact stone cases; or in a funnel-like strainer of webbing with a retreat. About natural size.

Figure 27. Caddisworm case of compact structure. About natural size.

Figure 28. Mayfly (*Heptogenia sp.*) Nymph. Under stones in swift water. Very flat body, smaller usually than the stonefly; three tails. Slightly magnified.

Figure 29. Dragonfly (*Anax junius,* Dru) Nymph. Extensible "lower jaw." Darts forward by expelling water from behind. Found in dense growths of green aquatic plants in still water. About natural size. Damselfly nymphs are similar, but have three long feather-like tails.

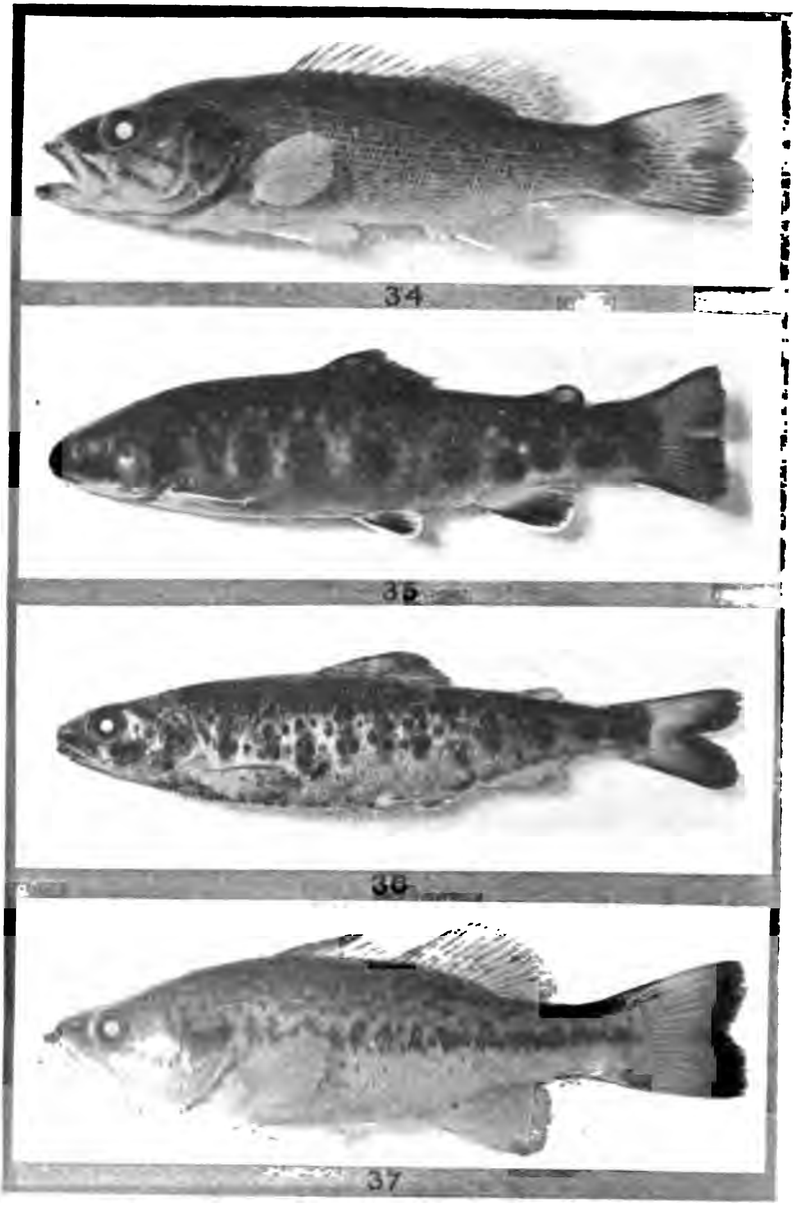
Figure 30. Water penny (*Psephenus lecontii,* Lec). Larva of a beetle. Common in swift water, clinging closely to under side of stones, occasionally at top or sides. Slightly magnified.

Figure 31. Fresh water shrimp or "scud" (*Hyalella sp.*). Weedy portions of the stream. Rapid swimmers, back foremost. Slightly magnified.

Figure 32. Water net (*Hydrodictyon reticulatum* (L) Lagerh). A green alga of the pond areas of streams. When spread, it resembles a fine meshed veil. A remarkable oxygenator. Sightly magnified.

Figure 33. Water moss (*Hypnum riparium*). Attached to stones or gravel in swift streams. About natural size.

PLATE VII.



CLEAN WATER FISHES — FINGERLINGS.

34. Smallmouth bass.
35. Brook trout.
36. Landlocked salmon.
37. Largemouth bass.

PLATE VII.

CLEAN WATER FISHES (FINGERLINGS).*

Figure 34. Smallmouth bass (*Micropterus dolomieu,* Lace). About three months old. Natural size.

Figure 35. Brook trout (*Salvelinus fontinalis,* Mitch). About seven months old. Slightly under natural size.

Figure 36. Landlocked salmon (*Salmo salar sebago,* Gir). About five months old. Natural size.

Figure 37. Largemouth bass (*Micropterus salmoides,* Lace). About three months old. Natural size.

---

* The usual photographs of fish picture the adult forms. Illustrations of fingerlings are given to make clear the difference between minnows and the young of other fish.

LIMITS OF TOLERANCE OF FISH TO TRADE WASTES

Dilution is the most important factor in questions of stream pollution. To judge of the probable effects of the discharge of trade wastes into a stream or to determine the basis of design for treatment works, it is essential first to ascertain the maximum amount of the given waste which can be discharged into the particular stream without resultant injury to fish; that is the limit of tolerance of fish to that waste, or the minimum dilution of the waste which will obviate injury to fish.

Sufficient dilution with clean water will render innocuous the most virulent poison. This is illustrated by the fact that all natural waters contain in solution certain salts and other chemicals, which give the water the qualities known as hardness and alkalinity. Normally these minerals are in amounts not only harmless, but perhaps essential to vigorous fish life; but any of them would be injurious to fish if in sufficiently strong concentrations.

Tables follow giving such information on this subject as could be discovered by an extensive search of available literature. These dilutions generally approximate to the limits of tolerance of fish and may be considered as tentative standards of allowable pollution of streams by these particular wastes.

It must be clearly recognized that these results are by no means exact and they must be used as rough approximations only. Fish of different species and the same fish at various stages of development differ as to susceptibility. Consideration must also be given to the effect of the waste on fish food and fish habits. Wastes may drive fish from a stream even though they would not kill them. Chemical constituents of the water of the stream or of other wastes entering the stream may greatly modify conditions. From various causes, the virulence of any poisonous waste will decrease with time and progress down the stream. Final results should always be subjected to an actual test on local fish of various ages.

Poison of any type can kill only a limited number of fish, as by the act of killing the poison is changed to something else, usually innocuous. Poisons differ in deadliness according as they attract or repel fish. Wastes which attract fish — such as some gas wastes — cannot be allowed anywhere in the stream to reach deadly concentrations; whereas types which are avoided by fish can be allowed in high concentrations in limited areas if they do not form an obstruction by which the fish cannot pass.

It is interesting to make a rough classification of such wastes in the order of toxicity as follows:

No dilution required — sawdust and treated sewage.
Dilution less than 1:10 — raw sewage, fibre factory wastes.
Dilution from 1:10 to 1:100 — spent dyes, paper mill wastes.
Dilution from 1:100 to 1:1000 — gas manufacture wastes, wastes from bleacheries.
Dilution from 1:1000 to 1:10,000 — caustic lime, bichloride of mercury and chemicals generally.
Dilution 1:10,000 to 1:100,000 — lime, strong acids, gas tar.
Dilutions greater than 1:1,000,000 — copper sulphate, bleaching powder.

One important class of wastes is not covered by the above classification. This comprises the organic wastes which, after passage into the stream, undergo putrefaction, such as sewage, wastes from canning factories and milk plants. Most of these wastes are not in themselves toxic to the fish, or but slightly so. Deadly effects are produced by putrefaction with resulting partial or complete absorption of the oxygen dissolved in the water and resulting suffocation of the fish. There is another phase to this particular type of pollution: the net results of it may be beneficial to fish life. Such pollution amounts to the fertilization of the stream, and, although all the fish may be killed in certain portions eventually these organic matters furnish material for fish food in other places. This has been brought out by Dibdin, who has advanced the theory that the North Sea fisheries are in some measure dependent on the sewage of London; by Whipple, in discussing the effect of the sewage of Rochester, N. Y., on the Genesee River, and it is probable that the sewage of the City of New York and adjacent communities is responsible for the fact that oysters grow with such rapidity and to such size in Raritan Bay.

This compilation was first made in 1917; it has been revised since and is thought to include most of the important available data on this subject. It does not include many of the determinations of Shelford on rare and unusual chemical compounds and the question as to whether a waste attracts or repels fish. Attention is called to a somewhat similar compilation entitled "Stream Pollution — Effect of Various Wastes on Fish Life" published by the U. S. Bureau of Fisheries, April, 1919.

Limits of Tolerance

Limiting dilutions alone are tabulated

STUDIES ON OYSTER CULTURE

Oyster Fishery is Failing. Oyster culture, the most valuable fishery in the State of New York, is rapidly declining and threatens to become extinct. Over a million bushels of oysters, valued at more than a million dollars, were annually harvested in this State a few years ago. To-day this crop has shrunk to one-half its former magnitude and is decreasing each year. Lack of seed oysters has caused this condition and, unless a plentiful and cheap supply of seed becomes available, this decline will continue until the production of our grounds is limited to the small output of our natural oyster beds. The Commission believes that by artificial propagation and improved methods of spat collection this industry can be restored to more than its former figure, thereby increasing the resources of the people of the State and making a direct financial return to the State treasury.

TABLE I.

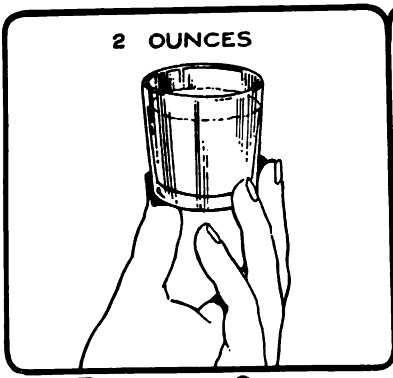
DECLINE IN ACREAGE OF STATE LEASED SHELLFISH GROUNDS.

(*Average revenue, $1.00 per acre.*)

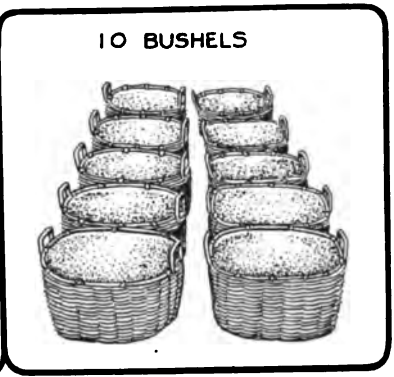
Year	Acres leased by State	Year	Acres leased by State
1915	33,956	1919	24,076
1916	29,611	1920	22,464
1917	27,118	1921	21,084
1918	25,847		

Growth and Decline of Industry. The oyster industry of New York State originally started on the limited areas in which oysters were found by the first settlers. Cultural methods of handling these shellfish were introduced at an early period. It was found that, if oysters were removed from the natural beds and placed in other waters, they grew more rapidly and improved in quality. Eventually this industry became highly developed, due to the discovery that different areas were best suited to the growth of oysters at

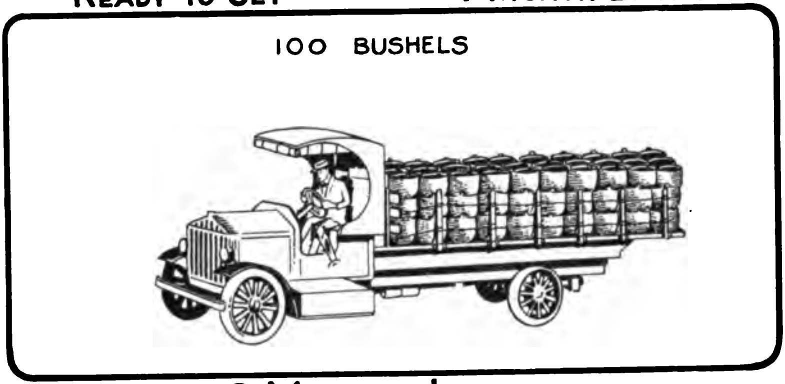
A MILLION OYSTERS



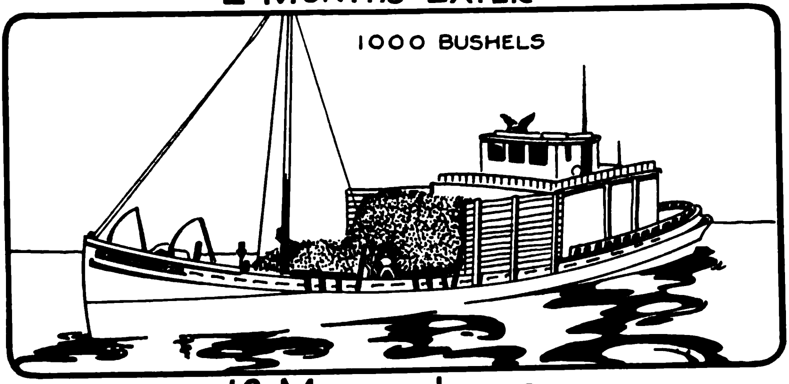
READY TO SET



1 MONTH LATER



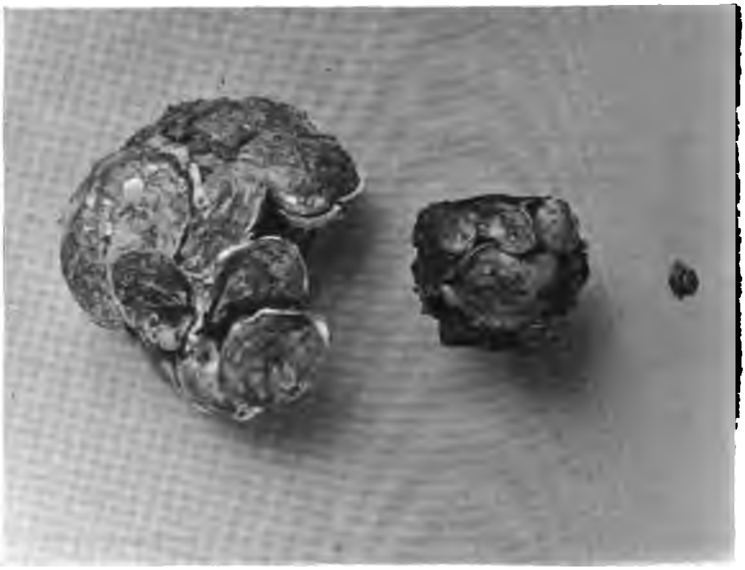
2 MONTHS LATER



12 MONTHS LATER

certain stages in their development. For many years the young oysters or "spat" have been obtained from the mouths of the estuaries along the sea front of Connecticut. These "spat" have been grown on suitable areas along the shores of Long Island Sound and in Peconic Bay and neighboring waters and the matured oysters fattened for the market in Great South, Raritan and Jamaica Bays. The present failure of the industry is due to the decreasing supply of "spat" obtainable from Connecticut.

The Source of Seed Oysters. Adult oysters have no power to move from place to place. The young oyster is a microscopic free floating organism and remains in this condition for a period of from ten days to a month. At the end of that time it adheres to some solid object and, unless moved by human agency, remains in that general neighborhood for the remainder of its life. During this drifting period the young oyster is entirely at the mercy of the winds, waves and currents, and the vast majority of them are swept out to sea, or elsewhere, where it is impossible for them to develop. In general, the favorable points for obtaining a "set" of seed oysters are determined by the currents and other hydraulic conditions, and it has been found that the most favorable locations are enclosed bodies of water, such as Great South Bay, or the eddies formed at the mouths of the tidal estuaries. Unfortunately, conditions in such enclosed bodies of water are often unfavorable for the healthy after-development of the oyster, so that the principal source of seed supply is from the estuaries. For this reason the Connecticut areas have been particularly productive.



Group of oysters one month after setting, two months later and twelve months later.

Failure of Seed Supply. It is unfortunate for oyster culture that these estuaries are most valuable harbors. The parents of the seed oysters were to be found in the natural growth beds well up these estuaries. The requirements of commerce have caused these streams to be lined with bulkheads, dredged to considerable depths and the towns and industries which have grown up about them have polluted the waters of the harbors. All of these causes, together with over-fishing of the grounds, have resulted in complete or partial extermination of parent oysters, and it seems that the present failure to obtain seed is due to a combination of these causes.

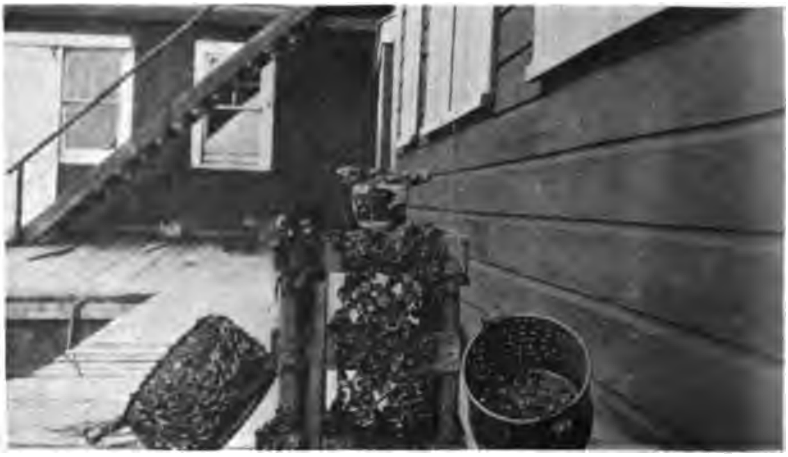
New Methods Must be Developed. Stream pollution has been claimed to be the chief cause of the failure to obtain a "set" of seed oysters in recent years. Undoubtedly it has largely contributed to bring about this condition, but the pollution complained of is not in the jurisdiction of the State of New York. Practically the only "setting" grounds in this State were in the Hudson river and about Staten Island; although these beds may have suffered from pollution, their complete restoration would not insure a sufficient supply of seed for our oyster industry. New York State has always been dependent upon Connecticut for the bulk of its seed supply. This supply has not only been greatly curtailed, but a proposed embargo on the exportation of seed oysters from Connecticut threatens to cut it off entirely. The rahabilitation of the New York oyster industry requires the development of new methods of obtaining seed oysters.

"Set" in Great South Bay. Oyster spat can usually be obtained in Great South Bay and at intervals of a few years the set in that locality is heavy. During the past summer it was enormous. The method heretofore used in collecting "spat" is to spread oyster shells on the bottom, on which shells the young oysters "set." When they are large enough to stand transportation, the shells and adherent young oysters are dredged up and laid down upon the growing grounds. Great South Bay is shallow and contains an enormous amount of aquatic life other than oysters. As a result the water at the bottom of the bay becomes stagnant, depleted of food material for oysters and also of the absorbed atmospheric oxygen, without which all gill-breathing animals must suffocate. Adult oysters have sufficient strength to create currents in the water, which bring food and oxygen to them; young oysters cannot do this. As a result, all of the myriads of oysters which last summer set upon the bottom of the bay lived but a few weeks. Great South Bay cannot, therefore, with the cultural methods now in use be depended upon as a source of seed.

New Methods of Seed Culture. There being no areas within this State in which a sufficient quantity of "spat" can be obtained by present methods, the rehabilitation of our oyster industry depends upon our ability to devise new methods of obtaining seed oysters which will be commercially practicable. Two promising lines of development offer themselves: first, the actual rearing of the young oysters under controlled conditions until they are of such size that they can be planted upon the growing grounds; and second, the improvement of the method of "spat" collection so as to enable the "set" which can be obtained in Great South Bay and similar bodies of water to be reared to commercial size.

Artificial Propagation Commercially Practicable. Attempts at the artificial propagation of oysters have been made from time to time for many years. Until the summer of 1920 these were all failures, owing to the impossibility, with the apparatus used, of preventing the escape of the larval oysters. It is necessary in any cultural process to change the water in which the oysters are kept in order to renew the food supply and to carry away the wastes created by the oysters themselves. As the young oyster is most minute, it was long impossible to devise a practicable method of removing the water without removing the oysters at the same time. In 1920 the Conservation Commission perfected, under laboratory conditions, a method of accomplishing this end, and for the first time the native oyster of the east coast of the United States was raised from the egg to the setting point under controlled artificial conditions. During the past summer this method has been given further study under laboratory conditions, with the result that much information on the technical side of the process has been accumulated. We are convinced that this method can be carried on on a commercial scale.

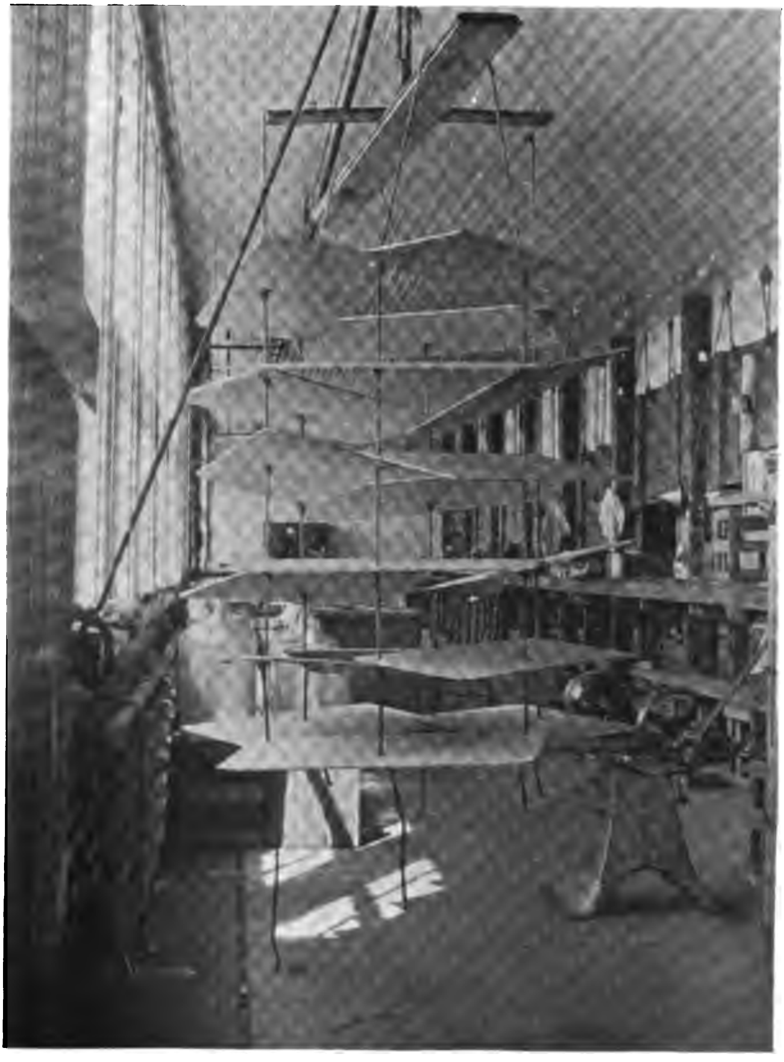
Young Oysters Must be Kept Above the Mud Line. In Great South Bay, during the summer of 1921, there was a tremendous "set." Apparently the early, hot, dry summer produced conditions favorable for an enormous concentration of young oysters. They set not only on the shells placed for the purpose on the bottom, but on practically everything that was submerged in the water of the bay. The nets of the local fishermen were so encrusted with young oysters that it was found a tedious and expensive process to remove them. Practically all of the oysters which set on the bottom of the bay died within a few weeks; those which became attached to objects above the mud line throve tremendously. If all the oysters on the fishermen's nets had been preserved, as they might readily have been by suspending these nets in the bay, enough seed oysters would have been obtained to carry the industry on for a year or so. This suggests the possibility of devising a form of "spat" collector which would hold the oysters above the stagnant water near the mud line until they developed sufficiently to be transportable to Peconic Bay or other growing grounds. This is a method somewhat parallel to that successfully used with the European oyster and is one of great promise. It should be taken up and the best form of collector determined by experiment.



Young oysters on nets and other objects in Great South Bay Throve above the mud line.

Better Oysters Obtainable. Successful European practice in "spat" collection cannot be followed in our waters on account of the high labor cost of separating the small oysters from the collector. If larval oysters can be made to set thickly on prepared plates, the shells will grow upward from the surface, giving what is known as "corn-on-the-cob set." Such "set" can readily be detached and the resulting small oysters can cheaply and easily be handled and will produce mature oysters of superior quality. This essential concentration of "spat" can be obtained in the tanks of a hatchery, in a locality like Great South Bay under such conditions as prevailed last summer, and perhaps annually in certain favored spots. It remains only to work out the technical details of such collection in commercial quantities.

Artificial Shellfish Hatchery. It is the opinion of this Commission that it is of the utmost importance to the oyster industry of this State and of material importance to the State as a whole that experimental work on the development of oysters be continued, but it believes that further studies must be made on a commercial rather than a laboratory scale. This can be done at comparatively small expense. The Commission already has at Cold Spring Harbor the necessary buildings to house the work and facilities for obtaining a supply of suitable water. It already has a portion of the necessary apparatus. The Commission proposes to establish at Cold Spring Harbor an experimental shellfish hatchery of such capacity that it should be able, when the technique of the process has been established, to produce annually marketable seed oysters of approximately $5,000 value. An appropriation of about $2,500 will purchase the necessary equipment, and a total appropriation of $5,000 will be sufficient to cover the installation and operation of this hatchery for a year and also the carrying on of studies as to the best form of collector to be used in Great South Bay. The Commission believes that the fisheries of the State of New York can in no



Collector for 100,000 oyster spat.

way receive a greater benefit than by the appropriation of such a sum for this purpose.

Both Industry and State Will Benefit. Not only will the successful development of a commercial method of oyster propagation benefit the oyster industry of the State and thereby indirectly the people the State, but there will be a direct and immediate financial return to the State itself. The State of New York and certain coast counties and towns own the greater part of the growing and fattening beds in the State. These are leased and the proceeds from these leases and taxes on oyster lands in general are an important source of income. On account of the limited amount of seed available, less than one-sixth of the grounds suitable for oyster culture have ever been taken up and those which have been leased are rapidly being given up. In 1915, 34,000 acres of oyster land were returning a direct revenue to the State. In 1921, this amount had shrunk to 21,084, and the loss will continue with increasing rapidity unless a supply of seed becomes available in the immediate future. The income of the State, due to lack of seed, is already more than $10,000 a year less than it was in 1915. The Commission believes that by the establishment of the proposed experimental hatchery and the operation of it for a few years improved methods of oyster culture will be perfected so that the industry can be brought back to a point such that not only will the lands previously leased be again taken up, but an even greater area of land will be utilized and the direct revenues of the State correspondingly increased. Four hundred thousand acres of State owned submerged land, now unused, can be made productive and a direct source of income to the State by the development of a cheap method of obtaining seed oysters.

Oyster hatchery — 100,000 oysters per day.

TABLE II

MILLION OYSTERS AT VARIOUS STAGES OF CULTURE; VOLUME; AREA OCCUPIED AND ESTIMATED VALUE

AGE	Stage	Volume	Area	Value total	Value per bushel
Ready to " set "	Tanks	2 cubic inches	63 sq. ft.	..	..
1 month	Collectors	10 bushels	1,000 sq. ft	$400	$40 00
5 months	Basins	250 bushels	0.33 acres	500	2 00
1 year	Beds	850 bushels	2 acres	1,700	2 00
2 years	Beds	1,400 bushels	4 acres	2,800	2 00
3 years	Beds	2,500 bushels	8 acres	5,000	2 00
4 years	Beds	3,500 bushels	10 acres	7,000	2 00

CUTTING TREES ON PRIVATE LAND

Opinion of the Attorney-General as to the Power of the Legislature to Regulate

In response to an inquiry from the Conservation Commission as to what authority the Legislature has under its police power to regulate the cutting of trees on private land, the following opinion was received from the Attorney-General:

June **16, 1921.**

Hon. ELLIS J. STALEY, ***Conservation Commissioner, Albany, N. Y.:***

INQUIRY

" DEAR SIR.— Has the Legislature, under the police power of the State, constitutional authority to regulate the cutting of trees upon privately owned land?

" You have requested my opinion upon the extent of the constitutional authority of the Legislature, in the exercise of the police power of the State, to regulate the cutting of trees on privately owned land.

" Your inquiry involves the constantly recurring conflict between present private property, as such rights have grown to be regarded, and the public welfare, present and future, as changing social and economic conditions constrain many to consider the ever-increasing demands of a rapidly growing population. Your inquiry necessarily involves the question whether forest destruction has yet advanced to that degree of spoliation and public detriment that the Legislature would be justified in extending the broad police power of the sovereign to the limitation of men's method of cutting trees on their own lands and for perfectly legal and proper purposes. That is primarily a question for the Legislature to decide, for only upon such determination by the Legislature, based on sufficient proof, can such legislation be justified.

" In view of the fact that this attribute of government is not fixed; but adapts itself to constantly changing conditions even as society, its organizations, its methods, its circumstances change, an answer to your inquiry involves as much the foresight of a seer as the research and deliberation of a lawyer. Especially is this so, as our courts have recognized the necessity of measuring the validity of such statutes by the demands of the times, rather than by the rigidity of written constitutions. They have held a law an unconstitutional attempt to exercise the police power, and a few years later a similar enactment valid because of circumstances arising since the first decision, or of evidences of critical conditions existing at the time of the prior determination but not then brought to the attention of the court.

"A striking example of such divergent decisions presents itself in the cases of People v. Williams (189 N. Y. 131), decided in 1907, and People v. Charles Schweinler Press (214 N. Y. 395), decided in 1915. In the Williams case a statute of 1903, forbidding the employment of adult women in factories before six o'clock in the morning and after nine o'clock in the evening was held inimical to the constitutional provisions guaranteeing to every citizen freedom of lawful employment, and as discriminative against female citizens in denying them equal rights with men. The opinion in the second case asserts that while the statutes in both cases are not substantially different in purpose, yet the two cases may be really and substantially differentiated, and says:

> " 'So, as it seems to me, in view of the incomplete manner in which the important question underlying this statute — the danger to women of night work in factories — was presented to us in the *Williams* case, we ought not to regard its decision as any bar to a consideration of the present statute in the light of all the facts and arguments now presented to us and many of which are in addition to those formerly presented, not only as a matter of mere presentation, but because they have been developed by study and investigation during the years which have intervened since the *Williams* decision was made. There is no reason why we should be reluctant to give effect to new and additional knowledge upon such a subject as this even if it did lead us to take a different view of such a vastly important question as that of public health or disease than formerly prevailed. Particularly do I feel that we should give serious consideration and great weight to the fact that the present legislation is based upon and sustained by an investigation by the legislature deliberately and carefully made through an agency of its own creation, the present factory investigating commission.'

" Thus it is manifest that the necessary consideration of existing, or seriously apprehended exigencies, rather than adjudicated precedents, renders the more uncertain and unsatisfactory an opinion on the constitutional validity of prospective legislation involving the exercise of the police power.

"Attempts have been made to define the police power. But almost as often as judges have resorted to definitions of this function of government, they have admitted the difficulty, if not the impossibility, of correct and comprehensive delineation and have turned to explanation and example. However, from a few of the well nigh innumerable judicial opinions — few, if any, subjects of the law have been so widely and frequently discussed — it can be gleaned that it is possessed by every sovereign state (In re Jacobs, 98 N. Y. 98), is inherent in the states of the American Union (People v. Budd, 117 N. Y. 1), and it is determined as each case presents itself whether there the power was properly invoked. It rests to a large extent on those ancient maxims of the law: 'So to use your own that you will not injure another,' and 'The safety of the people is the supreme law,' and the vital principles of both must be regarded and enforced.

"Usually when occasion arises for assailing a specific exercise of the police power, those, who believe their rights or property invaded and hence seek to overturn the law so effecting such result, invoke the fourteenth amendment to the Federal constitution and kindred provisions in the constitutions of the states. Such provisions declare that no state, 'shall deprive any person of life, liberty, or property without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws.' Considering the effect of such constitutional guarantees, Judge Field, in Barbier v. Connolly (113 U. S. 27), significantly observes:

> "'But neither the amendment — broad and comprehensive as it is — nor any other amendment, was designed to interfere with the power of the State, sometimes termed its police power, to prescribe regulations to promote the health, peace, morals, education, and good order of the people, and to legislate so as to *increase the industries of the State, develop its resources, and add to its wealth* and prosperity.'

"I have directed attention to the adherence of the courts to the determination of the necessity and legal propriety of the use of the police power in each case as it is presented. Your inquiry can be illumined and mainly answered by presenting some cases, both in this state and elsewhere, in which this power has been invoked to limit and restrain the owner in the use of his own property on his own land, for the avowed purpose of promoting the welfare of the community or a considerable part thereof.

"In Indiana, the legislature had declared by act that 'The use of natural gas for illuminating purposes in what are known as flambeau lights, is a wasteful and extravagant use thereof, and is dangerous to the public good.' The statute then forbade such use of natural gas and made the violation of the prohibition a misdemeanor. The same law also prohibited the burning of the lights which might be legally used between 8 a. m. and 5 p. m. That act was upheld as a valid exercise of the police power and as properly invoked to conserve the gas supply of the state. (Townsend v. State, 147 Ind. 624; 49 NE. 19.) It should be observed, however, that the court looked upon such gas as similar in character to fish and game, in that it came from a common reservoir underlying the lands of other persons than the defendant, each of whom had equal right with him to draw upon such supply, and any particular portion of such accumulation was not the property of any particular person until reduced to possession by him. Hence, as the court there said, one, tapping the common supply, could be so restricted as not to impair an equal right in others.

"Following the principle enunciated in the Indiana case, the Court of Appeals in this state in *Hathorn* v. *Natural Carbonic Gas Co.* (194 N. Y. 326), upheld an act of our legislature prohibiting the drilling in a specified locality into the rock for the purpose of extracting therefrom by artificial means water impregnated with minerals and containing in solution a high percentage of carbonic acid gas, for the purpose of separating such gas from the water and vending it separate from the water. Here, as in the Indiana case, the court seemed mainly to consider that such water was drawn from a common supply and that a law prohibiting the taking of that water by such methods and in such quantities as to impair the equal rights of others was a valid legislative act.

"The United States Supreme Court in *Lindsley* v. *Natural Carbonic Gas Co.* 220 N. Y. 61), approves the position of the state court with respect to its holding on the so-called anti-pumping law. In this case the contention having been made that the statute was invalid in that it indulged in unfair and inequitable classification, and hence discriminaton, the court laid down the following rules with respect to the police power as applicable in that case and which are generally applicable to all attempts at such legislation:

> "'The rules by which this contention must be tested, as is shown by repeated decisions of this court, are these: 1. The equal protection clause of the Fourteenth Amendment does not take from the State the power to classify in the adoption of police laws, but admits of the exercise of a wide scope of discretion in that regard, and avoids what is done only when it is without any reasonable basis and therefore is purely arbitrary. 2. A classification having some reasonable basis does not offend against that clause merely because it is not made with mathematical nicety or because in practice it results in some inequality. 3. When the classification in such a law is called in question, if any state of facts reasonably can be conceived that would sustain it, the existence of that state of facts at the time the law was enacted must be assumed. 4. One who assails the classification in such a law must carry the burden of showing that it does not rest upon any reasonable basis, but is essentially arbitrary. *Bachtel* v. *Wilson*, 204 U. S. 36, 41; *Louisville & Nashville R. R. Co.* v. *Melton*, 218 U. S. 36; *Ozan Lumber Co.* v. *Union County Bank*, 207 U. S. 251, 256; *Munn* v. *Illinois*, 94 U. S. 113, 132; *Henderson Bridge Co.* v. *Henderson City*, 173 U. S. 592, 615.

"The State of Massachusetts in 1845 adopted a law forbidding any person to 'take, carry away or remove . . . any stones, sand or gravel from any of the beaches in the town of Chelsea,' and prescribing a penalty for its violation. The defendant indicted for violating such statute did not deny the commission of the inhibited acts, but insisted that he was owner of the land from which such material was taken and that the act could not therefore apply to him, and that, if it did, it was unconstitutional and void. The object of the law was obvious, to protect the harbor of the city of Boston by preserving the integrity of its beaches and natural embankments. The position of defendant was condemned, and the validity of the act sustained (Commonwealth v. Tewksbury, 11 Met. 55), the court saying:

> "'The court are of opinion that such a law is not a taking of the property for public use, within the meaning of the constitution, but is a just and legitimate exercise of the power of the legislature to regulate and restrain such particular use of property as would be inconsistent with, or injurious to, the rights of the public.'

"It then refers to the disastrous effects upon Plymouth harbor of the cutting away of wood upon its beaches and the great consequent expense to both State and Federal governments of the artificial restoration of such beaches, and concludes:

> "'Without hazarding an opinion upon any other question, we think that a law prohibiting an owner from removing the soil composing a natural embankment to a valuable, navigable stream, port or harbor, is not such a taking, such an interference with the right and title of the owner, as to give him a constitutional right to compensation, and to render an act unconstitutional which makes no such provision, but is a just restraint of an injurious use of the property, which the legislature have authority to make."

"The reference to Plymouth Beach in this opinion, above noted, is significant in that the opinion says:

> "'*In consequence of cutting away the wood upon it* or from some other cause, it was washed away and broken through by the wind and sea, and the navigation was in danger of being wholly destroyed.'

"The fair inference from the opinion is that it was within the power of the state to have forbidden the cutting of shore-protecting trees as well as to prohibit the removal of sand and gravel serving the same purpose and without compensation to the owner. This case is cited in 159 U. S. 399 as illustrative of the exercise of the police power and without unfavorable criticism of its doctrine. In *Hodges* v. *Perine* (24 Hun, 516), an act of the Legislature (Chap. 190, Laws 1878) made it a misdemeanor for any person to remove sand or other similar material from the beach of the South Shore of Staten Island opposite and contiguous to the boulevard from within twenty feet of ordinary high water mark so as to injure such highway. An owner of land within the prohibited area sought an injunction restraining certain persons, acting under authority of this law, from entering on his premises and interfering with their use, and from threatening the crews of vessels loading sand from such beach. A temporary injunction was dissolved, and the validity of the law sustained on the authority of the Tewksbury decision above quoted.

"The latest word of our highest court upon the question of the proper exercise of the police power is found in *People ex rel. Durham Realty Corp.* v. *LaFetra* (230 N. Y. 429), decided in March, 1921. Here was involved the constitutionality of the so-called 'Rent Laws' of September, 1920. These enactments wrought radical changes in the law of landlord and tenant, permitting the tenant to retain the use of the demised premises upon his payment of a reasonable rent, the reasonableness of such rent being a question of fact for a jury, although the landlord might be unwilling to continue the lease for such consideration. This series of statutes also suspended the landlord's remedy by summary proceedings. The period of operation of these laws was fixed at two years; and they were passed expressly to meet the emergency of rent profiteering in the city of New York. They operated to deprive the owner of his real estate during the term of their existence, provided only compensation fixed by another, not by such owner, was paid by the occupant; and attack was made upon these laws upon the grounds that they impaired the obligations of contracts as they applied in some instances to rentals fixed by agreement before the act took effect; that they deprived the owner of his property without due process of law; that they denied to the owner equal protection of the laws, and that they took private property for private use without compensation. The Court of Appeals upheld this drastic legislation upon the ground of the dire and acute emergency in the lack of dwellings for the people of congested centers of population and the advantage being taken of that situation by selfish landlords to extort exorbitant and oppressive rents.

"In the prevailing opinion by Judge Pound, the basic principles governing the exercise of the police power under the recognized existing emergency was well stated as follows:

> "'The question comes back to what the state may do for the benefit of the community at large. Here the legislation rests on a secure foundation. (*Chicago & Alton R. R. Co.* v. *Tranbarger*, 238 U. S. 67, 76, 77.) The struggle to meet changing conditions through new legislation constantly goes on. The fundamental question is whether society is prepared for the change. The law of each age is ultimately what that age thinks should be the law. Decisions of the courts in conflict with legislative policy, when such decisions have been thought to be unwisely hard and stiff, have been met by constitutional amendments . . . ."

"The United States Supreme Court has sustained the doctrine of the LaFetra case in Marcus Brown Holding Co. v. Feldman (N. Y. Law Journal, April 23, 1921).

"The expression of judicial opinion, bearing most directly on the question you propound, which I have been able to discover, occurred in the State of Maine. (Opinion of Justices, 103 Me. 506; 69 Atl. 627.) There, under a peculiar provision of the constitution of that state, the legislature could request, in advance, the opinion of the judges of the Supreme Court of that state on the constitutionality of a proposed law. Under that constitutional authorization, the Senate of Maine requested of the judges of the Supreme Judicial Court an opinion on the constitutional validity of a contemplated act; and the importance of their opinions as bearing on the matter before me, warrants some detailed attention to that injuiry and its determination.

"On March 27, 1908, the Senate requested an opinion thus:

> "'In order to promote the common welfare of the people of Maine by preventing or diminishing injurious droughts and freshets, and by protecting, preserving, and maintaining the natural water supply of the springs, streams, ponds, and lakes and of the land, and by preventing or diminishing injurious erosion of the land and the filling up of the rivers, ponds, and lakes, and as an efficient means necessary to this end, has the Legislature power under the Constitution:
>
> (1) By public general law to regulate or restrict the cutting or destruction of trees growing on wild or uncultivated land by the owner thereof without compensation therefor to such owner?
>
> (2) To prohibit, restrict or regulate the wanton, wasteful, or unnecessary cutting or destruction of small trees growing on any wild or uncultivated land by the owner thereof, without compensation therefor to such owner, in case such small trees are of equal or greater actual value standing and remaining for their future growth than for immediate cutting, and such trees are not intended or sought to be cut for the purpose of clearing and improving such land for use or occupation in agriculture, mining, quarrying, manufacturing, or business or for pleasure purposes or for a building site; or
>
> (3) In such manner to regulate or restrict the cutting or destruction of trees growing on wild or uncultivated lands by the owners thereof as to preserve or enhance the value of such lands and trees thereon and protect and promote the interests of such owners and the common welfare of the people?
>
> (4) Is such regulation of the control, management or use of private property a taking thereof for public uses for which compensation must be made?'"

"Six of the eight judges of that court joined in sustaining such power in an opinion, the vital part of which is:

> "'Regarding the question submitted in the light of the doctrine above stated (being that of Maine and Massachusetts at least), we do not think the proposed legislation would operate to 'take' provate property within the inhibition of the Constitution. While it might restrict the owner of wild and uncultivated lands in his use of them, might delay his taking some of the product, might defer his anticipated profits, and even thereby might cause him some loss of profit, it would nevertheless leave him his lands, their product, and increase untouched, and without diminution of title, estate, or quantity. He would still have large measure of control and large opportunity to realize values. He might suffer delay, but not deprivation. While the use might be restricted, it would not be appropriated or 'taken.'
>
> '"There are two reasons of great weight for applying this strict construction of the constitutional provision to property in land: (1) Such property is not the result of productive labor, but is derived solely from the state itself, the original owners; (2) the amount of land being incapable of increase, if the owners of large tracts can waste them at will without state restriction, the state and its people may be helplessly impoverished and one great purpose of government defeated."

"From the few decisions, to which I have referred, it can be deduced that the domain of the police power is mutable coincidentally with the changes in society, that it must appear convincingly to the court that a public emergency, present or reasonably anticipative, exists that demands a remedy not available without curtailing usually recognized private rights of property or action, that the restrictions or limitations placed upon individuals apply equally to all within the same prescribed class or classes, and that the means adopted are reasonably designed to attain the objects sought.

"In the gas and mineral water cases, the courts sustain the exercise of the police power upon the ground that the prescribed acts impair the equal rights of others possessing identical interests in a common supply. In the cases prohibiting the removal of sand from the seashore and restricting the cutting of trees on privately owned land, the authorization for the use of this extreme power is placed on the broad basis of the public necessity of adequate transportation and the protection of the water supply of the state. In modern society facile means of transportation of men and commodities are absolutely indispensible to human existence. Likewise if the flow of rivers ceases, and lakes and ponds supplying such streams violently fluctuate from flooded banks to shallow basins the power, propelling factories and mills, and the waters for public and personal consumption may become so irregular and uncertain in their flow that industry would wane, unemployment would increase, health would be impaired, fires would destroy accumulated wealth, and the resources of the state would disappear even as they have been destroyed by war. In like manner the vast forests of the state have so disappeared from the activities of man that the materials much used in constructing the homes of men are obtainable only in more and more remote and inaccessible places and have so risen in cost that, due in part to such conditions, thousands of people are without homes suitable and proper for their physical, mental and moral growth and welfare.

"If, therefore, it can be shown to the satisfaction of the legislature and the courts that the cutting of immature trees, coniferous or hard, or both, on private lands, has so contributed, or is likely so to contribute, to such disastrous consequences as to actually threaten the sources of the water supply, indispensable to the life of the people, or even the present or future protection of timber necessary for the industries by which the people in large parts of the state live and for the construction of habitations in which they may dwell, then I am inclined to think that to meet such a crisis the legislature may properly, within its constitutional power, limit the right of an individual to use his own without regard to effect upon his fellows, and to compel him to consider the higher and greater right of the safety of the whole people in his use and application of that which only by the grace of the state, that is, the people, he is permitted to possess.

> "'As was said by Chief Justice Shaw, 'It is a settled principle, growing out of the nature of well ordered civil society, that every holder of property, however absolute and unqualified may be his title, holds it under the implied liability that his use of it may be so regulated, that it shall not be injurious to the equal enjoyment of others having an equal right to the enjoyment of their property, nor injurious to the rights of the community.' *Commonwealth* v. *Alger*, 7 Cush. 53, 84, 85.'
> St. Louis & San Francisco R'y. v. Mathews, 165 U. S. 1, 23.

"If to protect an individual or a number of individuals in their common rights, is to insure free passage from place to place of people and commodities for the benefit of the public welfare and the progress of society, the law can say that men shall use, or refrain from using, in a specified manner, their land and its products, why can not the same power of the state direct and control individual effort so as to prevent the destruction, or diminution of natural resources, as vital to the general welfare and as essential to commerce as harbors for ships and roads for vehicles? Surely the full, free development of the subject-matter of commerce, is as necessary, as vital, as generally beneficial, as the means by which the products of man's industrial efforts are distributed. Without production there can be no transportation; and without consumers there is no need of either.

"In drafting an act to effectuate such purpose, the rules and principles which I have attempted generally to outline should be observed. A substantial deviation from them would jeopardize the law. A strict adherence to them, especially in showing the emergency to exist, may impel the legislative branch of government to enact, and constrain the judicial branch to sustain, a tree-conserving law.

"I have refrained from submitting the form of the proposed Act. I do that on this ground. I do not consider it, in any way, the function of this office to formulate the policy which will govern another department, in the absence of a statute specifically placing such duty upon the Attorney-General. Your inquiry goes to the legal question of power, not to the present necessity of such legislation, which is a question of policy for the legislature. 'The scope of judicial inquiry in deciding the question of *power* is not to be confused with the scope of legislative considerations in dealing with the matter of policy.' (*People ex. rel. Durham* v. *LaFetra, supra.*) Nor should you overlook the fact that this opinion, given and answer to your very general inquiry, is of necessity, academic in character and should not be construed as approving or disapproving any specific act. I can pass on such proposed law only when its form and substance are submitted to me."

Yours respectfully.
(Sgd.) CHARLES D. NEWTON.
Attorney-General.
By (Sgd.) WM. T. MOORE.
Deputy.

DIVISION OF FISH AND GAME

DIVISION OF FISH AND GAME

Llewellyn Legge	*Chief Protector*
John T. McCormick	*Deputy Chief Protector*
Mannister C. Worts	*Superintendent of Inland Fisheries*
Emmett B. Hawkins	*Supervisor, Bureau of Marine Fisheries*
Sumner M. Cowden	*Field Superintendent*

DIVISION OF FISH AND GAME

The receipts of the Division of Fish and Game covering the fiscal year beginning July 1, 1920, and ending June 30, 1921, exceeded by $8,005.67 receipts ever heretofore collected over a like period. The total receipts of the Division during the fiscal year here covered amounted to $432,102.46. This gain is not the result of any unusually large collection of fines or penalties, but is rather, with a few exceptions, the general uniform advancement naturally expected to follow a vigorous and aggressive campaign of education and law enforcement such as has been carried on during the fiscal year.

Receipts of Division of Fish and Game, Fiscal Year Ending June 30, 1921

Hunting and trapping licenses	$274,888 16
Fines and penalties	77,727 70
Net licenses	27,564 21
Tax and rentals on shellfish lands	20,845 69
Non-resident fishing licenses	14,639 24
Tagging of game	6,207 20
Dog licenses, section 193	2,434 00
Trout tags	1,890 00
Sale of carp	1,635 40
Importation licenses, section 178	774 00
Breeders' licenses, section 372	685 00
Sale of duplicate hunting and trapping license buttons	616 65
Venison licenses, section 191	546 00
Scientific and propagation licenses, section 159	408 00
Fur bearing animal licenses, section 200	275 00
Sale of skins confiscated	244 89
Sale of trout tagging machine	200 00
Sale of boats (Caroline and Oneida)	200 00
Spearing licenses	131 19
Refund on pheasants from American Express Co	75 00
Rental on trout tagging machines	62 00
Special protectors' badges	27 00
Breeders' licenses section 377	20 00
Refund on engine	6 13
Total	$432,102 46

The principal sources of revenue showing losses over last year are the sale of confiscated skins, and the tax and rentals on shellfish grounds. These losses were not unlooked for. With the sharp decline in the price of raw furs it was expected that the receipts from this source would not equal those of last year — a banner year. The loss in receipts from taxes and rentals is due to the surrendering of leases on shellfish grounds in the marine district by oystermen, due to their failure for the fifth consecutive year to obtain a "set." This subject is discussed more at length elsewhere in the report.

The largest gain shown is in the receipts from fines and penalties collected as a result of actions instituted by the game protectors against persons for violating the Conservation Law in relation to fish and game. The gain here amounts to 7,395.63, an average gain per protector of over $56.00.

GAME PROTECTION

During the fiscal year ending June 30, 1921, the State game protectors prosecuted 4,156 cases of violations of the Conservation Law in relation to fish and game. The disposition made of these cases was as follows: Fines or settled favorably to the State, 3,512; suspended sentences, 96; acquittals, cancelled or withdrawn, 66; jail, 4; licenses forfeited, 478. The percentage of cases prosecuted this year in which the result was unfavorable to the State was the smallest in the history of the protective force, being less than two per cent. The average number of cases prosecuted by each protector was [illegible]. The game protectors of New York State lead the protectors of all other states in average number of cases prosecuted per man. The police force of the city of New York, perhaps the most efficient in the world, has a yearly average of about 18 arrests per man.

Flock of Blue Bills.

The gross amount of fines and penalties imposed on violators of the Conservation Law totalled $82,499.74. Of this amount $81,719.64 arose out of the prosecution of cases by inspectors and regular protectors, and $780.10 out of the prosecution of cases by agents and special protectors. The average recovery of inspectors and regular protectors was $571.46. The average recovery of agents and special protectors was $4.33.

The moneys actually collected and turned into the State treasury amounted to $77,727.70. The difference between the fines imposed and the money turned into the State treasury represents costs of court. The net recovery this year is larger by $7,395.63, or 10 per cent, than it was last year.

Court Costs. In addition to the $4,772.04 retained by the justices as costs, there were disbursed to justices, constables, attorneys and stenographers, for services rendered in the prosecution of cases, $2,115.00 making the total cost of prosecuting all violators $6,887.04. Of this amount but $778.90 was paid as attorney fees, an average of less than eighteen cents per case. The infrequency with which the protectors found occasion to employ the services of attorneys reflects the success of the efforts of the Commission to so educate them in court procedure that they may appear in justices' court as prosecuting attorneys, thus saving to the State the money it had been wont to pay for such services. The average cost of prosecuting each case was $1.66.

Special Protectors. There are 180 special game protectors in the service. Special protectors are appointed in the option of the Commission and serve without pay during its pleasure. Applicants for appointment are usually men in sympathy with the enforcement of the fish and game laws and actuated by desire to see the wild life of the State better protected. These men are generally sportsmen and owners and keepers of game preserves. The position does not require that any definite time be devoted to the work. Specials are expected to prosecute such violations as come to their attention, transmit to the Commission complaints of violations of the Conservation Law that cannot be personally handled, and cooperate with the regular protectors when called upon to do so. While only a limited number of specials detect and prosecute violators, they exert an influence that tends to create a better respect for the game laws in the community in which they reside. In the opinion of the Commission there are now in service as many special game protectors as the public needs require. Hereafter there will be appointed only occasionally a few specials who demonstrate peculiar qualifications for the position.

Special Work. Numerous complaints having been received by the Commission of the wholesale slaughter of deer and total disregard for the laws giving protection to the wild life of the State in the Adirondack mountains during the hunting season of 1919, the Commission last season designated fifty of its gmae protectors to work in the northern deer counties. The protectors worked in pairs and were so distributed that the territory covered by one detail overlapped that of another, in this way assuring the policing of every section of the deer country. Two weeks were spent in the work and evidence sufficient to warrant action being taken against over 180 persons secured. Up to date eighty-one persons have admitted violating the law, and settled for penalties aggregating $7,415, an average of over $90 per individual. There are still in process of settlement about 100 cases. Inspector C. E. Underhill has been assigned to the work of adjusting these matters, and is carrying it on with all dispatch. When the last case is disposed of it is expected that over 200 persons will have settled for their illegal acts of last fall, and that upwards of $15,000 in penalties will have been collected.

Shipping Permits. Provision is made in section 178 of the Conservation Law whereby persons legally taking nonsaleable fish and game in this State may transport it, without accompanying, during the open season therefor. At one time these permits were also required for the transportation of fish and game from a point without the State to a point within, but the law has since been amended. During the fiscal year there were approximately 20,000 of these shipping permits issued, 4,000 more than were issued in any year prior to the amending of the law permitting the importation of fish and game without permit. These permits, therefore, were used in the transportation of fish and game taken in this State.

The shipping law, as at present framed, permits a person to go into the hunting or fishing grounds of this State and take and ship, often to a point in some distant State, the bag limit of nonsaleable fish and game on which the season is open. For example: In the month of October a person may at one time ship to another in the State of Texas, 1 deer, 25 ducks, 8 geese, 8 brant, 3 pheasants, 15 plover, 25 snipe, 25 gallinules, 15 black bass, 5 squirrels, 2 grouse and 4 woodcock. While it is true it would be quite impossible for a person to take all these animals in one day, nevertheless there is no restriction against accumulating and transporting by common carrier at one time such a shipment. Nor is there any restriction against the operation being repeated as many times as the taker has shipping permits. True, the Commission has no knowledge of a shipment of such proportions ever having been made, but it does know of instances where the bag limits of different species have been for days accumulated and shipped at one time, thus reserving for future use the remainder of shipping permits, six being allowed to a person in a year.

Most every person who hunts knows that the open seasons as at present fixed are as liberal as the animals can stand without bringing about a condition of threatened exhaustion. This is attested to by the yearly increasing numbers of petitions received by the Commission praying that additional protection be granted to fish and game in certain localities, in most instances giving as reasons for so requesting that fish and game are on the verge of extermination. At the present time there are effective forty-one orders, either lowering the bag limit, affecting the open season, or closing the season entirely.

Unquestionably one of the leading factors in bringing about the present depleted condition of many species of our wild game is the shipping permit. Aside from the transportation of deer its use should not be permitted. Persons taking game in this State and desiring to transport it, should be made to accompany it. To permit its transportation by common carrier only invites in the fish and game that which every effort in the past ten years has been made to wipe out—commercialism. In many states the sale of wild game is permitted; shipping permits encourage the shipment of fish and game to the markets of these states.

Hauling canoes over a beaver dam on Adirondack cruise.

Were the law providing for the shipping permits repealed, or amended to allow each person but two permits, one for the shipment of quadrupeds and birds, and one for the shipment of fish, it would no doubt, to a great extent, alleviate the ever-increasing drain on the wild life of the State, which in many sections of the State during the past few years has reached a point where intervention by the Commission was necessary to save the species from complete extermination.

Tip-Ups. Tip-ups may be used for fishing through the ice, except in waters inhabited by trout, to take bullheads, catfish, eels, perch, sunfish, and except during the months of March and April, pike and pickerel, and except from March second to May tenth, pikeperch. Ffteen tip-ups may be used by a person.

In Lakes Erie, Ontario, Cayuga, Seneca, Oneida and the Finger lakes, the use of tip-ups in large numbers is not reflected in a falling off of the annual fish yield of these waters. But in waters of the size of Youngs and Weaver lakes in Herkimer county, Kinderhook and Knickerbocker lakes in Columbia county, Grass and Butterfield lakes in Jefferson county, and waters of a smaller area, the result of the use of large numbers of tip-ups is seen in the depletion of the species, often making necessary the closing of the waters for a period of years that the fish may come back to normal abundance.

It is not felt that the use of tip-ups should be entirely prohibited, but experience leads to the conclusion that the number that should be permitted, except in the large bodies of water of the State, should be materially decreased. Fifteen tip-ups used by the number of fishermen that avail themselves of this privilege will, in the course of a winter, take considerably more fish than would be taken by angling, and often a great deal more than the waters can safely yield without endangering the future supply.

In some sections of the State the proposition of tip-ups has become so serious that the Commission, upon petition of residents, and after holding a public hearing to determine the advisability of such action, issued orders either prohibiting entirely the use of tip-ups or reducing to five the number that may be used. There are operative at the present time orders affecting in this manner over forty different bodies of water.

The number of people who make a practice of fishing with tip-ups is increasing each year. Each year also brings to the Commission increased requests from sportsmen and farmers that the use of these devices be prohibited in certain waters on the ground that " their use is exterminating the fish." Evidence adduced at public hearings held on this subject throughout the State during the past year tends to bear out this conclusion. The Commission, therefore, feels that the law should be amended so as to allow the use of but five tip-ups to a person in all waters of the State, excepting those first above mentioned.

Deer. Last winter being an exceptionally mild and open one, the deer wintered well, and suffered little, if any, from lack of food. For the first time in a number of years there were no reports of deer suffering. In the summer and fall hunting months, the deer wander through the woods singly, or in parties of two or three. In the winter, when the snowfall is heavy, they gather in parties, often of a considerable size, where food is plentiful. There they remain throughout the season, forming a " yard " by keeping a net work of hard-beaten paths open through the snow in order to reach the browse of bushes and trees. In these yards during winters marked by continued heavy snowfalls the mortality among the deer often runs very high. The deer being unable to get beyond the yard soon exhaust all available food and slowly succumb to starvation, the older and weaker ones dying first. The State's game protectors keep a careful watch on these yards, and when the deer are confined for any prolonged length of time, or show signs of exhaustion, beaver meadow hay is cut and so placed that it may be easily reached. Many deer are thus saved that otherwise would perish. Last winter the cutting of hay was unnecessary, and the mortality among the deer herd was the lowest in recent years. A season or two ago, when the taking of deer of either sex was permitted, and the number of animals taken in an open season amounted to over 20,000, fear was felt that this was a drain far beyond that which the herd could stand. Under the present protective laws, the deer seem to thrive so well that their future appears assured.

Fur-Bearing Animals. The business of trapping fur-bearing animals in this State is extensive. In the trapping season of 1918, there were reported taken no less than 641,000 fur-bearing animals. The estimated commercial value of these animals, based on prevailing prices of that year, is $1,797,540.

The species of fur-bearing animals inhabiting this State are the muskrat, skunk, raccoon, fox, mink, sable or marten, otter, fisher, bobcat and bear. The chief fur-bearing animal of the State, in point of yield, is the muskrat. More muskrats are taken in this State each year than the combined number of all other fur-bearing animals, protected and unprotected. The number of muskrats reported taken in 1918 was 399,938. The animal showing the next highest yield is the skunk, of which in the year 1918, there were 187,703 taken. These two animals together with raccoon, mink and sable comprise the fur-bearing species protected in this State by law.

Foxes, otters, fishers, bobcats and bears are not protected by law in this State, and may be taken at any time, in any manner and in any number. The habits of these animals, excepting the bear, are recognized as [illegible] to the continuance of our more useful species, and their taking is encouraged. The destructive habits of the foxes are well known, and while their extermination would not at all be welcome, their alertness and capacity to meet requirements make further protection unnecessary. The fishers and bobcats are the most deadly of our forest carnivora. Shy and resourceful in their habits, and difficult of capture, they are in no immediate danger of extermination in this State.

American furs are the best in the market.

Unquestionably the fur-bearing animals trapped in the seasons of 1918 and 1919 far exceed the number taken in any of the ten previous years. In these years, encouraged by the abnormally high prices that prevailed for pelts, large numbers of persons, in addition to professional trappers, even including school boys, trapped with success. The season of 1920, therefore, found the larger markets, like those of New York and St. Louis, crowded with furs, and prices of pelts at a point where it did not pay to run a line of traps. Consequently, large numbers of trappers suspended operations for the year. This temporary suspension of trapping acted to give the animals just what they were sorely in need of — an opportunity to augment their greatly diminished numbers. Reports of protectors' observations of the animals this past summer are very encouraging, and it is expected that the checking of the abnormal drain of the past three years will be seen in increased numbers of the animals during the seasons to come.

Game Birds

To the act giving effect to the convention between the United States and Great Britain for the protection of migratory birds, concluded at Washington in 1916, must go much credit for the return in greatly increased numbers of those migratory birds that have each year for decades past been visiting our State in fewer numbers.

The Osprey — a harmless hawk which should be protected.

In many of the southern states, prior to the Federal act, there were no effective regulations governing the taking of migratory birds. Birds could be taken at any time, in any manner, and in any number, and each year there was an influx of hunters into these states who wantonly slaughtered large numbers of them. This unregulated killing was more and more each year reflected in decreased numbers of the birds returning to this State. Luckily in these southern states, as in New York for years, there are now regulations relating to seasons, limits, possession, manner of taking, and sale of game.

In the year following the passage of the Federal act there was a very noticeable increase of birds in the migration flights. Letters reaching the Commission from sportsmen and others all told of having observed more brant, ducks, geese, rails and shore birds than in any year during the past decade. The census cards of the protectors, upon which they are required to specify in detail the protected kinds of game birds and waterfowl seen, when compared with cards of years immediately preceding, showed that not only were migratory birds present in numbers far exceeding other years, but also many species of birds native to this State.

The most appreciable gain in the birds native to this State is in the grouse. In 1918 these birds were bordering on extinction in this State, and many reasons were being given for their depletion. The reason most commonly accepted, however, is that which told of how the great horned owls of the country to the north, suffering from lack of food, due to an epidemic which greatly diminished the number of rabbits, their chief source of winter food, were forced south. Being most destructive to all kinds of game, though showing preference for birds, these aerial pirates nearly succeeded in wiping out the grouse of this State.

So serious did the situation become that the Commission was forced to act to save the grouse from complete extermination. An order was accordingly passed, effective throughout the entire State, shortening the open season and reducing the day and season bag limits. So apparent was the need for this additional protection that the Legislature the following year amended the Conservation Law so as to provide for but one month's open season, and reducing the day limit of birds to two, and the season limit to ten. The birds have since been steadily increasing until there are now in the covers of the State more grouse than at any time during the past ten years.

The little Screech Owl is a useful mouser.

Seizure of Nets. During the fiscal year the protectors confiscated 355 illicit seines, gills, traps, fykes and squat nets. The estimated commercial value of these seizures is $11,010.95. This far surpassed the work in this line of last year when there were 275 seizures with an estimated value of $9,982.25.

Confiscated nets are held until they have outlived their usefulness as evidence, when either they are returned to owners, sent to State fish hatcheries, or destroyed by burning.

In addition to the above, there were 740 birds, fish, lobsters, quadrupeds and other miscellaneous species confiscated.

Skins Confiscated. From the sale of 147 skins and pelts of fur-bearing animals confiscated by the game protectors during the fiscal year the State realized $244.89.

While the receipts from this source are below those of last year, the loss is not attributable to any neglect or lack of supervision over the activities of the trappers, but to the fact that there was less trapping of fur-bearing animals last year than in any of the ten preceding years.

WAR ON VERMIN

In 1919 the Conservation Commission launched a vigorous capaign to lessen the number of animals whose proved habits are recognized as inimical to the interests of conservation. The animals whose influence investigation proved is more harmful than good are as follows:

Lynx
Red fox
Gray fox
Weasel
Porcupine
Great horned owl
Goshawk
Crow
English sparrow
Starling
Cooper's hawk
Snowy owl
Great gray owl
Bobcat
Hunting house cat
Red squirrel
House rat
Woodchuck
Sharp-shinned hawk

This list the Commission caused to be printed on the back of every hunting and trapping license issued, together with a request that they be destroyed whenever opportunity to do so is afforded. A like list was furnished each protector and a rifle, with instructions to carry it at all times when on patrol, and keep a record of the number and species destroyed. The record to date is very gratifying, there being killed upwards of 5,000 different animals during the fiscal year ending June 30, 1921.

When it is considered that the depredations of these species include such acts as gnawing trees and causing them to die, destroying corn and grain in the fields, killing song birds, destroying their nests and eating their eggs and young birds, digging holes in fields and making earth mounds, raiding vegetable gardens and poultry yards, it can be readily seen what an incalculable saving has accrued to the farmer and the sportsman from the destruction of these animals.

LICENSES, TAGS AND PERMITS

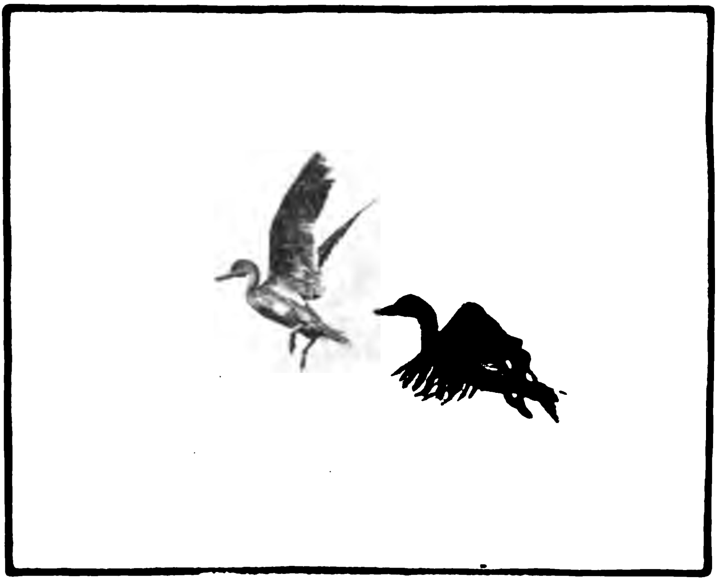
Hunting and Trapping Licenses. There were 284,496 resident hunting and trapping licenses and 4,046 nonresident hunting and trapping licenses issued during the fiscal year ending June 30, 1921. The price of a resident license is $1.10; the price of a nonresident license is $10.50. The sale of these licenses brought the State the sum of $274,888.16 net. This is $1,526.26 more than was received from this source the previous year.

The law making provision for hunting and trapping licenses provides that a fee of twenty-five cents shall be paid to each clerk issuing a resident license, and a fee of fifty cents for the issuing of a nonresident license. It further provides that there shall be paid to each county clerk 3 per centum of all moneys arising in his county from the sale of hunting and trapping licenses. During the period here covered such fees aggregated $71,292.60.

While it is not maintained that the fees paid to clerks for the handling of these licenses more than adequately compensates them for the labor entailed, it is felt that there should be a more equitable distribution of it. The price of a resident license has for years been $1.10, ten cents to be retained by the clerk issuing it. The licensee paid the ten cents' fee to the clerk, and the State paid the 3 per centum, postage and expressage. Two years ago the law was amended increasing from ten to twenty-five cents the fee to which the clerk was entitled, yet the price of the license was not raised. This acted to decrease by 15 per cent the money accruing to the State from the sale of these licenses, there being but eighty-five cents received for each license sold instead of $1.00 as formerly. Out of this the State must pay the 3 per centum, postage and expressage aforementioned.

The Commission feels that the statutory costs should be more evenly apportioned between the State and the licensees. It, therefore, respectfully renews its recommendations of last year that the law be amended fixing the price of a resident hunting and trapping license at $1.25, twenty-five cents to be retained by the clerk.

Sale of Hunting and Trapping License Buttons. On January 1, 1917, there became effective a law providing that every person going afield in pursuit of wild animals in this State must have, in addition to a hunting and trapping license on his person, a button bearing a number corresponding to the number of his license. This law further provides that the button must at all times be worn in a conspicuous place on the clothing when hunting, and the failure to do so is punishable by forfeiture of license.



Pin Tails getting under way.

Passage of this law is attributable to the known fact that it was a practice with many persons who go hunting but a few times a year, usually in vacation periods, to forego the hunting and trapping license requirements. The larger number of these people now take out licenses knowing that the absence of the tell-tale button justifies the presumption they are hunting illegally. Many letters received from sportsmen complaining of having seen hunters and trappers afield without the required button have led to the apprehension and conviction of persons guilty of violating the hunting and trapping license law. To the passage of this law must go in no small measure credit for the increased sale of hunting and trapping licenses that followed in the years subsequent to 1917.

Unfortunately in the course of a year many of these buttons are lost by the licensees. This is often the result of faulty construction, but more often the result of carelessness on the part of the licensee. In the absence of a provision in the law setting forth the course to be pursued in such cases, the Commission adopted a policy of renewing lost buttons at approximate cost.

The receipts from the sale of buttons during the fiscal year ending June 30, 1921, amounted to $616.55, indicating that 4,111 persons were furnished with duplicate hunting and trapping license buttons last year.

Confiscation of Licenses. The Conservation Law provides that every person, except minors under the age of 16 years, and occupants of farm lands actually occupying and cultivating the same, going afield in pursuit of wild animals must have a huntng and trapping license on his person. The penalty for failure to meet this requirement is forfeiture of license. During the fiscal year the protectors confiscated 478 hunting and trapping licenses.

Nonresident Angling Licenses. In 1915 there was placed upon the statute books of this State a law requiring a nonresident to have a license to take fish by angling in certain waters in this State. This law provided that no person, except a bona fide resident of this State for at least thirty days prior to such taking, shall take fish by angling in any of the fresh waters under the jurisdiction of the State of New York without first procuring a license so to do. This law also carried two exceptions — a nonresident person under the age of 16 years is not required to have a license; nor does a resident of the Dominion of Canada require a license to fish in parts of the international boundary waters under the jurisdiction of the State of New York if a similar license is not exacted from residents of this State to fish in the part of such waters under the jurisdiction of the Dominion Government.

The price of a nonresident angling license is $2.50, and their sale is steadily increasing. During the past fiscal year there were 7,546 licenses sold, which netted the State $14,639.24. In the previous year the receipts from this source amounted to $11,372.28.

As with the hunting and trapping licenses, the clerk issuing the license receives a fee of fifty cents, and the clerk of the county in which the license is issued receives an additional 3 per centum, or six cents for every license issued in his county.

Spearing Licenses. The law provides that spears may be used in the taking of fish, except trout, black bass, pickerel and maskalonge, in the Niagara river between the lower steel arch bridge and the suspension bridge at Lewiston Heights at any time during the open season for such fish, provided a license so to do is first obtained. The fish most commonly taken are carp, catfish, dogfish, bullheads, mullet, suckers and eels. These species are what are known as deleterious fish, not protected by law, and recognized as being harmful to the propagation of protected game fish. The spearing of these fish in the Niagara river limits the propagation of these species to a point where they do not hold in check the multiplication of the more desirable fish. There is excellent fishing in the Niagara river for black bass, maskalonge and trout.

There were 135 spearing licenses issued during the past fiscal year. The price of a license is $1.00, and the State received from their sale $131.19.

Combined Hunting, Trapping and Angling License. There is no law in this State requiring a resident to have a license to take fish by the method of angling. There is a law requiring persons to have licenses to hunt or trap; a law requiring persons to have licenses to possess fur-bearing animals, either for exhibition, scientific or propagation purposes; a law requiring persons to have licenses to operate fish hatcheries, and fur farms, and game farms, but no law requiring licenses to take fish by angling, and this in spite of the fact that the State, at considerable expense, operates fish hatcheries in which it artificially propagates millions of fish for planting in such waters of the State as are set aside for the exclusive use of anglers.

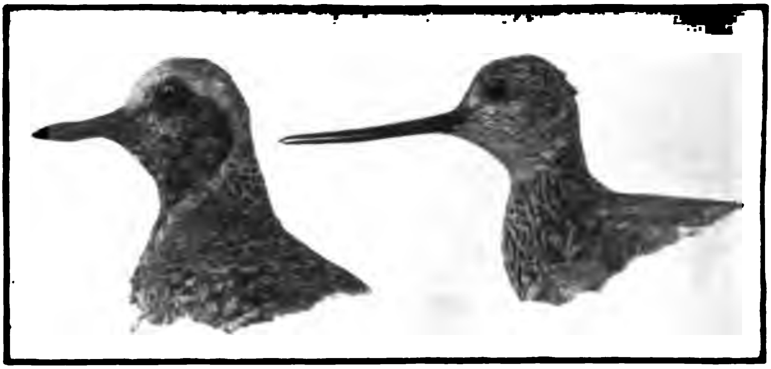
As the motorist contributes toward the upkeep of the highways; the hunter and trapper toward the stocking of the covers with game; and innumerable others for privileges of one sort or other, so, in the opinion of the Commission, should the angler in some measure contribute toward the maintenance of the State fish hatcheries.

The State operates twelve of these hatcheries, in which it annually produces millions of fish, which go to the stocking of waters to be taken by angling, and to the stocking of other waters to be taken by nets, spears and set lines. The commercial fishermen pay license fees to operate their nets, their set lines, and their spears in certain waters. Why then should not a license be required to take fish by angling, a method so persistently pursued that it takes a large part of the output of State's hatcheries to keep the streams of the State from becoming unduly depleted of fish.

The Commission feels that a license should be required to take fish by angling, and so recommends that section 185 of the Conservation Law be amended to provide for a combined hunting, trapping and angling license, carrying the same exceptions as now carried by the hunting and trapping license, the price to be $1.35, thirty-five cents of which should be retained as his fee by the clerk issuing the license.

Scientific and Exhibition Licenses. From the sale of licenses under section 159 subdivisions 1 and 2, the State received $408.00.

A license under subdivision 1 permits the holder to collect or possess fish, aquatic animals, quadrupeds, birds, birds' nests or eggs for propagation, scientific or exhibition purposes. When a license under this subdivision is applied for by a person other than an officer of a duly chartered museum or society incorporated for scientific, educational or public exhibition purposes, every means of investgation is exhausted to determine the fitness of the applicant to hold permit. Applications for this license number hundreds each year. That only sixty-three were acted upon favorably in the last fiscal year reflects the efforts of the Commission to guard against the possibility of one of the licenses falling into the hands of a person who the law did not contemplate should have one. Of the sixty-three licenses issued twenty-seven went to museums, scientific societies or officers thereof.



A study in bills — Black-breasted Plover and Greater Yellowlegs.

A license under subdivision 2 permits the holder thereof to possess any species of fish, game birds, quadrupeds or aquatic animals for propagation purposes. This license differs from that issued under subdivision 1, in that it does not authorize the holder to collect the specimens at any time in this State. The animals that are possessed under this license must be acquired in a manner not at variance with the methods set forth in the Conservation Law for the ordinary taking of them. For the most part these licenses are taken out by persons desiring to keep as a pet a wild animal taken legally during the open season, and by persons possessing ducks as decoys, which are of a species native to this State. There were 372 of these licenses issued last year, and their sale netted the State $372.00.

While the receipts from the sale of licenses under section 159, subdivisions 1 and 2 are larger by $131.00 than those of last year, the gain is in the sale of licenses under the latter subdivision. There was only one more license issued under subdivision 1 than last year.

Importation Licenses. There were 774 importation licenses issued by the Commission during the fiscal year. The sale of these licenses, at $1.00 each, netted the State $774.00, a gain of $68.00 over last year.

An importation license affords a means whereby resident sportsmen hunting or fishing in other states or countries may bring back with them the fish and game there taken when the open seasons in this State are closed. This license permits the holder to transport into this State, during the close season, nonsaleable fish and game, or fish and game for which there is no open season in this State, legally acquired and exported from the place where taken. Fish and game transported under this license, except quadrupeds which may be transported by common carrier when shipping permits are attached, must be accompanied by the license.

Licenses to Raise Fur-Bearing Animals. In 1911 there was placed upon the statute books of this State a law legalizing the breeding of skunks in captivity, under license, for commercial purposes. Subsequently the law was amended and its terms broadened so as to include all species of fur-bearing animals protected by law. This resulted in an increased demand for licenses each year until in 1920, six years after the enactment of the last amendment to the law, there were thirty-six persons engaged in operating fur farms in this State under license. This fiscal year the Commission issued fifty-five of these licenses, and received from their sale $275.00, an increase of approximately 53 per cent over last year.

Game Breeding Licenses. While the Conservation Law prohibits the sale of wild game, whether taken within or without the State, provision is made for the raising and selling of certain species under specific conditions. Elk, black and mallard ducks, deer, Canada and Hutchins geese and pheasants may be raised, provided a license under section 372 is first obtained. Game raised under this license, when killed and tagged under rules adopted by the Conservation Commission for purposes of regulation, may be sold at any time for food. The tagging of the game is done by a representative of the Commission, and a charge of five cents is made for each tag used. The price of a license under this section is $5.00, and it is effective until the 31st day of December of the year of issue. Receipts from the sale of these licenses during the past fiscal year were $685.00.

Tagging of Imported and Domestic Game. Provision is made in the Conservation Law for the importation of certain game from without the United States. The species that may be imported are pheasants, Scotch grouse, European gray-legged partridge, European red-legged partridge, Egyptian quail, and the carcasses of European red deer, fallow deer, roebuck and reindeer. Only the unplucked carcasses of birds may be imported.

As a precaution against any native game finding its way into the market, the law provides that immediately upon the importation of game, and before its sale, there shall be affixed thereto identification seals. These seals are affixed to the game by the Conservation Commission, and remain so affixed until the game is consumed. For each seal used there is a charge of five cents made.

The business of importing game was almost wiped out during the war. The receipts from this source in 1919 amounted to only $706.35. Since the termination of the war the outlook is encouraging. Receipts this year from the tagging of imported and domestic game amount to $6,207.20. This is an increase over last year of approximately 65 per cent.

Permits to Import Game for Sale. Under section 377 of the Conservation Law the Commission during the past fiscal year issued four permits, and received in payment therefor the sum of $20.00. These permits are issued to persons without the State to import certain species of game and sell the same for food. Before such permit is issued, applicant must satisfy the Commission that the game to be imported has been bred in captivity and killed and tagged under a breeding law similar in principle to the law governing such trade in this State. This is a statutory requirement, and inability to meet it is the reason for unfavorable action upon many applications.

Licenses to Possess Venison. In 1918 the number of deer reported by hunters as having been taken was 8.293. The number of licenses to possess venison after the close of the open season issued in that year numbered 378. Thus it will be seen that approximately every twenty-second person obtaining a deer took out one of these licenses. In 1919. the year when the taking of deer of either sex was legal, there were issued 833 such licenses. which. following the same process of computation, indicated there were not less than 18,326 deer killed during the open season. That this figure is conservative is borne out by data obtained from other sources.

During the fiscal year ending June 30, 1921, there were issued 546 of these licenses. Using the same ratio that was used in computing the years of 1918 and 1919, there were approximately 12.000 deer taken during the last open season. As the deer supply of the State is estimated to be about 50.000, the number taken last year is 24 per cent of the herd, which is about the maximum drain it is capable of standing without becoming endangered.

These figures, if serving no other purpose. reflect the wisdom of the repeal of the law permitting the taking of deer of either sex, and of the passage of the law limiting the taking of but one deer having horns not less than three inches in length.

Receipts from the sale of these licenses amount to $546.00.

TROUT HATCHERIES

There are twenty-five hatcheries devoted to the artificial propagation of trout under permits issued pursuant to section 371 of the Conservation Law. While no fee is charged, before a permit is issued applicant must satisfy the Commission that he has facilities for the propagating of this species of fish that come within the intent of the law. A permit allows the raising of these fish throughout the year, and the sale or exchange at any season for purposes of propagation or exhibition. If trout are to be disposed of for consumption, they must first be tagged with an indestructible tag, placed on the tail of each fish with a machine supplied for such purpose. Machines are furnished by the Commission with the understanding that title thereto shall remain in the State. A rental, the actual cost of manufacturing the machine, is made for the first year, and an annual rental of one dollar thereafter. A charge of one cent each is made for tags. From the sale of trout tags during the fiscal year the State received $1,890.00 — $148.00 more than was received from this source last year. Rentals of tagging machines amounted to $200.00.

GAME FARMS

Nearly fourteen years have elapsed since the Conservation Commission purchased land at Sherburne, N. Y., to be used as a game farm for the raising of pheasants for introduction into the covers of this State.

The first year there were distributed but eight hundred birds and five thousand eggs. While the output was not very large, a world of experience was gained, and from that time the output has steadily increased each year.

Subsequently two additional farms were established — one at Brownville, Jefferson county, and one at Middle Island, Long Island.

One of the impressive things about these farms is their intensive yet very efficient arrangement. Over three thousand adult birds are wintered. About twenty thousand young pheasants are hatched and brooded each season. With the exception of about twenty-five hundred, which are grown to maturity to be used as breeders, the young chicks are distributed at the average age of twelve weeks.

In addition to chick pheasants, each spring there are distributed approximately one hundred thousand eggs.

Pheasants and pheasant eggs are gratuitously furnished upon application to any resident of the State. The birds are furnished with the understanding that they will be liberated in covers suitable to their habits; and the eggs with the understanding that the applicant has facilities for hatching and that the chicks hatched when of an age that will permit of liberation with reasonable safety will be turned loose in such covers.

Large numbers of chickens are also raised on the farms. While the pheasants are raised in the open and under conditions as nearly as possible paralleling those they will find in the covers of the State when liberated, the chicks have large ranges with long multiple-unit houses. The hens serve a double purpose. They not only furnish incubation for the hatching out of the pheasant eggs, but they provide the major part of the first three or four weeks' food of the young birds. During the first two weeks the diet of a chick pheasant consists principally of hard-boiled eggs worked through a meat chopper and mixed with equal parts of milk mash and grains and charcoal. Too, when young pheasants are sent out from the farms they are accompanied by their foster parent. When received by the applicant they are promptly taken to suitable covers and liberated. The hen will there provide for them and guard against their natural enemies until chicks are of a size large enough to fly, when they will take up their abode in a nearby thicket, thereafter shifting for themselves.

Deadly enemies of young game birds — Great Horned Owls caught poaching.

In addition to pheasants and chickens, many other different species of wild life find asylum on the game farms, although not a few are unwelcome. In spite of every precaution to prevent vermin from becoming established on the farms, frequently a fox, weasel, mink, hawk or predatory cat finds its way to the bird pens and works havoc.

Sportsmen, farmers and others interested in conservation or game raising are always welcome. Along the roads leading to the game farms are signboards conspicuously placed bidding welcome and inviting visitors. The people that accept this invitation number thousands each year.

Green food forms an essential part of the diet of pheasants, and all such food required is raised. Oats, hay and other fodder, peas, corn, carrots and turnips are grown. This does not interfere with bird raising, but is rather a help to it. The pheasants are permitted to run at large over these fields and here find the insect life that forms so essential a part of their diet. No spraying for the killing of insects or larvae is required on the game farms or adjacent farms; the birds attend to this.

The most successful year of the farms was that ending June 30, 1921. Six hundred and fifty applications were received for pheasants, and all were filled, 11,377 birds being distributed, all large, well-developed, active pheasants. The number of birds sent out from the farms is larger by 15 per cent than the number distributed last year.

There were also eleven hundred and eighteen applications received for pheasant eggs. These applications were filled in the order received, and as promptly as eggs became available. The eggs distributed totalled 103,300, an increase over the output of last year of 12 per cent.

The Commission continued its policy of furnishing eggs to fish and game clubs interested in stocking the State's covers with pheasants. A few of the clubs reported having raised as high as three thousand birds. Returns on the whole were very gratifying and all told of uniform success.

Accompanying each shipment of birds and eggs is a booklet containing instructions for handling. The book is profusely illustrated, containing cuts of every important phase of the work. That these directions serve their purpose is manifest from the reports of persons to whom eggs and birds have been furnished telling of their success.

Indicative of the efficiency with which every detail in connection with the distribution of birds and eggs from the game farms is handled, and of the hearty co-operation received from the transportation companies to insure proper routing and safe and prompt deliveries, is the small amount of claims yearly paid to the State for lost birds and eggs. Claims paid last year amounted to but $75.00.

Returns of the game killed covering thirty-one of the State's sixty-two counties have been tabulated and thus far show that there were 35,000 pheasants killed during the open season of 1919. Full returns will undoubtedly show upwards of 75,000 pheasants having been taken. The pheasant is a bird of comparatively recent introduction, the first stock to be placed in the covers of the State being raised on the State game farm at Sherburne, N. Y., less than fourteen years ago. That it is now thoroughly acclimated is more apparent each year as reports covering the birds are received. In 1918, 34,000 pheasants were taken; in 1919, reports covering one-half the State show 35,000 as having been taken; and it is safe to say, basing an estimate on observations made by protectors, reports of 1920 will indicate that there were in excess of 100,000 taken. Under the present law only the male pheasant may be killed, and then only during the last two Thursdays in October and the first two Saturdays in November. Only three pheasants may be taken in the open season. With the game farms maintaining their present yearly output, and the birds continuing to freely propagate in the wild, in a few years there undoubtedly will be in the covers of the State pheasants sufficient in number to permit of a longer open season and liberal bag limit without endangering their chances of becoming permanently established.

BUREAU OF INLAND FISHERIES

The Bureau of Inland Fisheries issued during the calendar year ending December 31, 1921, 7,070 net licenses, and collected as fees during the fiscal year ending June 30, 1921, for the issuing of such licenses, $27,564.21, indicating the average fee received by the State for each license to be about $3.90. The total receipts are $524.48 less than collections of the preceding year. This falling off is due to the Commission cancelling all licenses for nets to be used in Seneca, Cayuga and Owasco lakes. At the time the Commission concluded to revoke all net licenses in these waters there were being operated therein twenty-nine seines and traps, the license fees for which aggregated $860.60. It will thus be seen that the deficiency in license fees this year is not due to any lack of demand for licenses but to the closing of certain waters to the use of nets.

The use of nets below Verplanck's Point and a few miles above the point, and the taking of shad before they are ready to spawn, is one of the causes of the great loss in reproduction. The steamboats which ply the river disturb the spawning beds, especially in shallow parts where the shad are in the habit of casting their spawn. Shad begin to spawn a short distance below Crum Elbow, between Hyde Park on the east and West Park on the west. The favorite spawning place is near Esopus light and along the west shore of the river and on Esopus Meadows. Another favorite spot is Kingston Middle Grounds, extending from Kingston light to Turkey Point, and known as "The Flats." It is claimed that more shad spawn here than in all the rest of the river. Practically no shad are caught above Catskill. The shad do not frequent the creeks flowing into the Hudson river, but deposit their spawn in the river.

From the pound net there is no escape.

The Commission made a reservation under which nets should not be used during the shad season from the buoy at Kingston Point to one opposite the village of Barrytown. A further reservation should be made if the supply of shad in the Hudson river is to be maintained at a fair standard. This would call for extending the time during which nets may be used an additional twenty-four hours. The law now requires nets to be removed after sunset Friday night and not reset until an hour before sunrise on the following Monday morning. If this were extended so that it would cover the period from Friday night until an hour before sunrise on Tuesday, it would have a decidedly beneficial effect in permitting the shad to reach their spawning grounds.

Report of Fish Taken. In the aggregate of all kinds, the fish taken during the calendar year, as reported by the licensed fishermen, totalled 4,787,403 pounds for which there was received $567,493.16, an average price per pound of approximately 12 cents.

There were 2,448 persons licensed to use nets this year, and the figures here shown are the fish taken and prices received by them. They do not include the fish taken by persons licensed to use set lines. Holders of set-line licenses are not required to make a report of the fish taken, but it is estimated that each set line will, in the course of a year, take fish to the value of $5.00. To the above, therefore, should be added the value of the product of 4,624 set lines, $23,120, making the total value of the fish taken from the waters of New York State $590,613.16.

As against this the fishermen paid to the State of New York in license fees for the privilege of operating nets in the waters of the State a sum equivalent to about 4 per cent of the value of the fish reported taken.

Set Lines. There were 4,624 licenses for set lines issued during the year of 1920. The fee for a set line is $1.00; and there was received from their sale $4,624. The fish that may be taken on a set line are bullheads, catfish, eels, perch, sunfish, carp, mullet and dogfish, these being classed as coarse fish and recognized, particularly the carp and bullheads, as harmful to the propagation of other fish. They are for the most part prolific breeders and the taking of them in large numbers does not act to endanger their continuance in the waters of the State but to hold them within reasonable bounds. Set lines are not permitted in trout waters; the waters in which they may be used are specified by the Commission and the seasons for their use fixed.

Hudson River Fisheries. The fisheries of the Hudson river during the year ending December 31, 1920, yielded 788,556 pounds of fish. In this catch were included nearly all edible species. The largest catches were of shad, carp, herring, suckers and eels. While the total catch was smaller by about 36,000 pounds than it was in the preceding year, the falling off was due to the failure of the shad to return to the river in their usual numbers, the catch being about 45 per cent less than that of a year ago. Though there was a falling off in the number of pounds of shad taken, there were appreciable gains over other years in catches of most species. The most notable gains occurred in the catches of carp, herring, bullheads and perch.

The strong market of 1919 for the fish of the Hudson river continued throughout the year of 1920, prices averaging a trifle higher for most species. The average price received per pound for fish in 1920 was sixteen cents as against fifteen cents the preceding year. These figures are not estimated but are compiled from returns made to the Commission by the fishermen as being actual pounds of fish taken and prices received.

Fisheries of Sodus and Fair Haven Bays and Adjacent Waters. The licensed fishermen operating in Sodus Bay, Fair Haven Bay and adjacent waters in which the use of nets is legalized took from such waters during the calendar year ending December 31, 1920, 323,362 pounds of fish, and received from its sale, according to reports made to the Commission, $32,885.00, an average of about ten cents per pound. The catch of fish in these waters during the period here covered is larger by 83 per cent than the catch of the previous year. Only a few species of fish are taken in these waters, the most prominent being the ciscoe, of which the yield totalled 283,542 pounds. The other species obtained were the carp, bullhead, dogfish, eel and sucker. Of the last named fish there were taken but 775 pounds.

Shad. The shad is one of the most valuable of food fishes, its flesh, although very bony, being delicious. It occurs along the entire Atlantic coast and makes its appearance in the Hudson during the latter days of April, ascending the river to spawn. Nets are licensed to take shad between March 15th and June 15th. Once present in the Hudson by hundreds of thousands, the catches of recent years have been steadily diminishing. In the year 1915 it reached its lowest level, but 24,209 pounds being reported. In the years following the catches showed a gradual increase, until in 1919 the catch was larger than the aggregate of the ten preceding years. In 1920 there was a falling off of 45 per cent, 140,177 pounds being reported.

Herring. The catches of herring reported by the licensed fishermen totalled 101,850 pounds, 27,700 pounds more than reported last year. The herring is one of the most important food fishes taken from the waters of this State. Great quantities of them are each year preserved by smoking, salting or canning. The young are often canned and sold as sardines.

BUREAU OF FISH CULTURE

With the exception of some seasonal difficulties with which the hatcheries of the Commission have had to contend, the fish cultural work of the Commission has been successfully conducted during the past year. A spirit of earnest cooperation and friendly rivalry is manifested by both foremen and employees at the stations in an endeavor to equal or surpass the records of previous seasons of fish distribution. The early spawning of the pikeperch at Oneida lake, because of unusually warm weather in April, and their failure, because of this condition, to run up the affluents of the lakes, accounts for the comparatively small distribution of this species during the year. This, of course, was unavoidable and goes to prove that the weather is an important factor in determining the results of fish cultural operations.

Hatchery troughs do the work of a flowing stream.

Very effective work has been done in stocking the inland waters of the State and full appreciation has been shown by the fishermen. It has been the aim of the Commission to conduct its system of hatcheries on a strictly business basis. Accurate records of the distributions are kept not only in the office of the Commission, but at the hatcheries from which the fish come. Temperature records, previous stockings and general suitability of the lakes or streams to the fish applied for are a few of the details which are considered before fish are delivered to applicants.

The necessity for the practice of strict economy is reiterated to every employee of the Commission whose duties form part of the work of fish culture.

The foremen and skilled laborers at the hatcheries are receiving compensation which, in private business affairs, would not be considered adequate for some of the services performed.

As far as appropriations will permit, trucks are being used to deliver fish. Because these trucks can reach certain localities by direct route in a shorter period of time than it would take the railroads, young fish life is preserved and economy of time, effort and expense effected.

A plan of general permanent repairs to hatcheries has been adopted which will minimize construction expense, and, with the assistance of the railroads in the matter of free transportation, a considerable saving may be recorded.

Probably a better appreciation of the methods of conducting operations at the various fish hatcheries of the State might be obtained by an inspection of the stations. The actual work could be observed, the improvements made and needed could be noted, and personal talks with the foremen on the ground would be productive of much useful information relative to increasing both the output and efficiency of the hatcheries. To this end the Bureau of Fish Culture cordially invites legislative inspection of its hatchery plants, confident that those who grant appropriations for the propagation and distribution of fish to public waters will agree that the money has been wisely and economically expended in the public interest.

Transporting Fish. Not the least of the problems which confront the man engaged in fish cultural operations is that of the transportation of his hatchery product. Poor connections on the railroads have been a serious contributory cause of fish mortality. At one of the State hatcheries, it has been necessary to make a twenty-four-hour trip by steam railroad in a circuitous way in order to reach a destination but thirty miles from the station. This trip, of course, involves long waits at junction points and, necessarily, the constant attendance of a messenger in order that the fish may be kept alive.

With the improved condition of the highways of New York State, the use of suitable delivery trucks seems to afford a remedy. A truck capable of carrying from 60 to 70 forty-quart cans at the Cold Spring Harbor Hatchery, on Long Island, would save the cost of railroad car transportation, the delay incident to the passage of the fish car "Adirondack" from Long Island to New York city and return by float, and in every instance much valuable time which is now lost, and which not only endangers the young fish but causes no little expense to the State.

Stocking Policy. The maintenance of a stocking policy for the waters of the State is of primary importance. To establish such a policy, so far as appropriations by the Legislature would permit, water surveys by scientists have been made. These surveys have been of value in determining the proper inhabitants of lakes and streams. The results of previous stockings by the Commission and a knowledge of the kinds of fish in the waters have been of great aid in the general stocking of waters where a survey has not been made. Too much cannot be said against the mixing of inharmonious species. The evil results of this ill-advised policy are apparent every day, particularly in the increase of the brown trout in waters where the brook trout once held sway. The brook and brown are the most conflicting of the trouts, and, when once the larger brown trout has become established in a stream, it becomes a mere question of time until it becomes dominant, and finally of the total extinction of its smaller and more delicate competitor.

Instructions as to planting and warnings against the placing of brown trout in waters which are inhabited by the brook trout are sent broadcast throughout the State in an effort to impress upon citizens the care which should be taken to keep apart fish which are likely to prey one upon the other. These instructions also contain information relative to species other than trout, as to the care of fish en route from the railroad stations to the waters to be stocked, and as to the necessity of safeguarding waters inhabited by trout from possible invasion by spiney-rayed fishes through planting in communicating waters. Instructions are also given to applicants as to the proper method of planting fry and fingerlings so that better results may be obtained.

Physical Condition of Hatcheries. The general physical condition of the hatcheries is the best in many years, and this condition is uniform. In the interest of economy and betterment, it has been decided that all future repairs to the hatcheries and equipment shall be of a permanent nature, and that as fast as wood structures show signs of needing repairs they are to be replaced by concrete. This has been done recently in several instances and the cost has not been significant, when it is considered that the improvements greatly facilitate the work, that they are durable, and will not require constant attention and intermittent expense.

Railroad Transportation. During the past year a great contribution to the success of the Bureau of Fish Culture in stocking the waters of the State has been the valuable aid extended by a large majority of the railroads. At a time when the policy was for the strictest economy, these companies gave free transportation to our messengers when carrying young fish along their lines. It may be argued that the companies benefit by the planting of young fish in the vicinity of their rails, that good fishing attracts the sportsmen to patronage of the roads, and that the advantage to the railroads and to the Commission is mutual. The Bureau of Fish Culture prefers to regard this courtesy as an evidence of appreciation of its efforts to stock depleted waters, and as a public-spirited cooperation which is deserving of and has appreciation.

Courtesy. The Bureau of Fish Culture acknowledges with pleasure the valuable cooperation of the United States Bureau of Fisheries. Eggs of land-locked salmon, steelhead and lake trout were received in generous quantities through the courtesy of the United States Bureau. When the fish were developed to the fingerling stage, they were planted in suitable waters of the State. The National Commissioner of Fisheries has evinced a very friendly interest in the work of the Conservation Commission, which has met with cordial appreciation.

Adirondack Hatchery. The work at this station for the fiscal year has been along the usual lines of fish propagation. Landlocked salmon, brook trout, brown trout, rainbow trout and lake trout, together with whitefish in large numbers, and a small number of maskalonge shipped from the Chautauqua Hatchery, were hatched and distributed to applicants. It was the foreman's first attempt at hatching maskalonge at this station. He reported that a fairly good percentage hatched, but that they did not appear to it lively. The water is probably too cold for the successful propagation of this species.

The greater number of brook trout eggs came from commercial hatcheries, and by following the custom of recent years of sending a messenger for them, the loss in transportation was small. The hatchery had in all a total of 1,830,935 brook trout eggs, including those taken in local waters, as well as those received from commercial hatcheries. The percentage of hatch from the eggs was very good, and no serious loss has been experienced in the fry or fingerlings. Because of the coldness of the water at the Adirondack Hatchery in the early spring, the fish grow slowly until about June 1st; but from that time on their growth is very rapid. Some specimens which were kept in an aquarium until they were a year old attained a length of five to six inches.

Since July 1, 1920, this station has distributed 1,556,358 brook trout fry and fingerlings, 134,330 lake trout, 26,872 rainbow trout, 42,775 brown trout, 51,941 landlocked salmon, 6,174,000 whitefish, and 290,000 maskalonge; 13,348,000 whitefish eggs were taken from local waters, and of this number 6,132,000 eggs were shipped to other hatcheries of the State.

The greater part of the fish distribution has been done with the big aviation truck in use at the station. It is possible to put 40 to 45 cans of fish on this truck, and to unload them along the road to various applicants. A distance of 150 miles can be covered in one day, whereas, if the attempt to deliver the fish by train were made, it would take two or three days.

When delivered by truck, the fish are in much better condition than when they are sent by railroad. The truck is a great aid to distribution at this station.

Many repairs and improvements have been made to the grounds and buildings. A new wagon shed containing a garage for the truck has been built, and a new porch on the cottage adds much to the appearance and comfort of the place. It is planned to build a new set of concrete rearing races at the rear of the hatchery. These will be supplied with water from the hatchery after the water has been used in the troughs inside the building. This will not only increase the rearing facilities, but will give additional space much needed to prevent overcrowding in other races, and will enable us to keep many of the fishes until they are larger before shipping.

Cleaning fish for cold storage.

It is hoped that some plan may be devised in the near future wherein the abundant supply of spring water, which is in the swamp adjoining the lawns, can be used. The station could then have the benefit of this cold water, both in the outdoor races and in the hatchery building.

Bath Hatchery. While the work at this station has been very satisfactory, and the number of fish distributed large, the output could be materially increased by arranging hatching troughs so that the water could be used a second time in rearing tanks outside of the hatchery buildings after it comes from the troughs inside.

It is planned to replace the Ford truck now in use at the hatchery by a larger truck having a capacity of sixty forty-quart cans. This will materially aid in the distribution of fish and satisfy a need to which the foreman has frequently called attention.

During the year a steam-heating plant was installed in the hatchery building and has given much satisfaction.

A wooden flume extending from the fountain to the hatchery, a distance of about 800 feet, was built for experimental purposes, and has proved a distinct success in aerating the water. Heretofore this station had been troubled with diseases which resulted in considerable losses of fish. By the use of the flume for aeration purposes, the difficulty has been eliminated. It is recommended that an appropriation be asked from the Legislature for a new concrete flume to replace the present one.

Caledonia Hatchery. A very successful year was experienced at the Caledonia hatchery, substantial increases having been made in the collection of brown and rainbow trout eggs. The stock fish are reported to be in fine condition and many eggs should be collected this fall. Owing to the increased demand for brown trout, it is suggested that more eggs of this species be kept at the station in future, especially as the fish do exceptionally well there. The lake trout were not planted as fry, and the foreman reported that on July first nearly all were feeding and should develop into a fine lot of fingerlings. Good success was had with the whitefish and herring, and on account of the mild winter the eggs hatched early. Good pikeperch eggs were received from the Oneida hatchery at Constantia; but those shipped from Michigan died in transit. About June first the station received 200,000 steelhead trout eggs from the United States Bureau of Fisheries and, on the first of July, the fry were ready to take food and should be ready for distribution by the time the other fish at the hatchery have been planted.

Last fall Spring creek was deepened from the springs to the tracks of the Lehigh Valley Railroad, and there is now very little water in the old mill pond. This is a great improvement over conditions in former years.

New comfort stations have been built on the grounds for the use of visitors, and new tables constructed and placed in the grove. These are much needed improvements. At the foreman's residence a bath was put in, the water being pumped by electric motors.

A new heater should be installed at this station, as the old one is burned out and cannot be used.

Chautauqua Hatchery. After the close of the fiscal year (July 1, 1920) this station distributed over 250,000 brook trout fingerlings, and this ended the output of a successful season. When the stock at the hatchery had been planted, the foreman and two employees were assigned to look after the exhibits of fish at the Rochester Exposition and the State Fair at Syracuse. The foreman also supervised the operations of the field station at Sodus Point during the month of November.

Aside from the general routine of repairs several improvements were made at the station, the most important of which was the painting of the hatchery buildings.

In July and August of 1920 an exhibition of fish was made at the station which attracted much favorable comment from many visitors.

Owing to an early season, the maskalonge work commenced two weeks before there is record of any such previous start at this station. The spawning season was short but successful.

On May 10th, as soon as the maskalonge work was finished, the distribution of the brook trout was commenced, and this is being continued at the close of the fiscal year. A large portion of the distribution from the hatchery has been done by baggage shipments. The railroad people have been uniformly courteous in assisting the messengers to reach their destinations as soon as possible. The local railroad, the Jamestown, Westfield and Northwestern, furnished transportation for fish and messengers, but as this is a trolley railroad and the baggage cars are limited, the main shipping outlets have been at Westfield and Jamestown which are now reached by truck. It has been possible to ship from Westfield and Jamestown by using the hatchery truck, which has been of very material aid, and which would be greatly missed in the work of the station. By using the truck quick connections were made, and these fast connections greatly conserved the fish.

Cold Spring Harbor. Aside from the general routine of work many repairs and improvements have been made at this station. The employees made whatever repairs were needed to the buildings and ponds and mended the screens wherever necessary. A hatching table which has been in use since the hatchery was built was replaced by a modern battery giving double the jar capacity of the table and thus increasing the output of the hatchery.

In November the trout at this station began to spawn and eggs were collected almost every day. In this month the collections from stock trout were 685,400 brook trout; 294,460 brown trout and 104,400 rainbow trout eggs. Mr. William M. Keil, superintendent, Tuxedo Park, contributed 200,000 green brook trout eggs, for which he was to receive equal value in smelt eggs if the hatchery was successful in the collection of these eggs. In December our stock trout were still spawning and we collected 28,800 brook trout eggs, 14,790 brown trout eggs and 226,800 rainbow trout eggs. A supply of the rainbow and brown trout eggs was furnished to the Adirondack, Bath and Delaware hatcheries. During the latter part of this month the tomcod commenced spawning and the collection of eggs on Shinnecock bay was 69,750,000. In January the tomcod work was at its height, but with the warm weather and high temperature of the water, the eggs were not as good as they would have been with the water at the freezing point. The month's collection of tomcod eggs was 494 quarts or 185,250,000, which filled all of our hatching jars.

During the months of January and February the station hatched and planted 171,000,000 tomcod fry and delivered the greater portion of them with a Ford motor truck.

Five Brook Trout, six pounds, one ounce, Croton River, April 17, 1921.

The creek was cleared of grass and made ready for the annual spawning function of the smelt in such a way as to make the collection of eggs easier. The foreman has to watch these fish carefully as, in some seasons, their spawning will vary a month or more. During February the foreman made several trips to the east end of Long Island making notes on the winter flatfish and watching the condition of the spawn so as to begin collecting as soon as the fish were ready to deposit their eggs. Late in February a few ripe fish were found; but by the first of March they were coming fast.

All of the month of March was spent with the fishermen taking the eggs of the flatfish which would otherwise have been lost in the fish box when sent to the city market. Eighty-seven million eggs were collected and 66,000,000 fry were planted in Long Island waters.

About the first of April there was a big run of smelt, but the fish were small. Later on it was found that the fish were spawning along the sandy shores where the fresh water runs out of the many flowing wells forming small creeks down to the tidewater. One hundred forty-five million smelt eggs were collected.

Early in April the foreman received from the Constantia hatchery 750,000 eyed pikeperch eggs in fine condition. These were hatched and delivered to applicants on Long Island.

By the last of January the troughs were full of trout fry, some of them feeding, and the planting of trout fingerlings began on Long Island in the fore part of April. The fish were from two to two and one-half inches long.

Eleven million one hundred thirty thousand lobster fry were planted by this station in Fort Pond bay during the month of June.

Reports were received from fishermen that the fishing is very good in most of the waters. During the spring at Hook creek and the Rockaways, the flatfish and tomcod were plentiful — boats with one man catching 50 to 60 flatfish and as many as 150 tomcod. The fishing for flatfish with trawls was formerly confined to the eastern waters of Long Island, but last spring the fishermen worked to nearly the length of the sound.

During June a new roof was put on the engine house, the buildings painted and other necessary repairs made.

Delaware Hatchery. Successful results attended the work at the Delaware hatchery during the past fiscal year.

In addition to the regular distribution to applicants, 100,000 brook trout fry were sent to the Summitville field station for further cultivation and distribution to waters in the vicinity.

The replacement of a few troughs in the hatchery building, repairing the hatchery floor races and sluiceways, painting the buildings, etc., are improvements recommended and should be made.

Dunkirk Hatchery. This hatchery is one of the largest of its kind on the Great Lakes and fishermen report that since it has been in active operation fishing has been greatly improved — notably so during the present year.

In addition to the regular output of the station 29,796,000 eyed herring eggs were sent to the United States hatchery at Cape Vincent for distribution by the United States Bureau of Fisheries.

A four-inch water main, which can be used in case of emergency, was laid into the hatchery. This main was given a trial last winter, and it was found that the chlorine used did not affect the eggs, which hatched out about three weeks earlier than the eggs in the lake water.

New gutters were laid around all the drives and the roads resurfaced with crushed stone; but a gutter or curb should be put on the opposite side of the driveways. This would improve the appearance of the grounds.

Eavetroughs and conductor pipes were put on the cottage and a new garage built.

The buildings have been newly painted and the lawns graded and seeded.

Fulton Chain. When water conditions are considered, the output of fish from this hatchery during the past year has been fairly large. The water which is taken from the Old Forge pond becomes very warm in the early spring, and the land locked salmon is the only fish that can be successfully raised to a large fingerling stage in the hatchery troughs.

During the fiscal year considerable repairing has been done to the hatchery. A new cement floor has been laid and twenty-eight cement troughs have been installed. These troughs have given complete satisfaction, and because of their smooth surface are much easier to keep clean. Owing to the cold weather and the arrival of eggs at the hatchery during the winter, it was necessary to delay putting in the new head troughs, but the Commission expects to replace the wooden headed troughs with concrete ones, and these, when completed, will eliminate the cost of repairs.

Temporary troughs have been erected on the plot of land recently purchased from the Thistlethwaite estate, and brook trout are being reared there. If the water supply proves to be suitable, it is planned to construct permanent races at this place, thereby increasing the output of brook trout fingerlings by at least 25 per cent.

Linlithgo. The output of this hatchery varies from year to year according to the number of applications to be filled. The only eggs collected by the hatchery force are from the shad, the others being transferred from various stations.

The shad season was short and the weather conditions unfavorable, so that only 703,125 fry were hatched, and these were planted in the Hudson river in the vicinity of Rhinecliff and Kingston.

No extensive repairs were carried on, and when the work became slack th men were transferred to other stations to assist in the work at those plac

Oneida Hatchery. The regular work of propagating brook trout, pikeperch smallmouth black bass and yellow perch was carried on at this station, a as the distribution report shows, the work was a success, although the pi

Fourteen Brook Trout, weight seventeen pounds, caught in the west branch of the Croton River, May 22, 1921.

perch egg collection was unsatisfactory because of weather conditions. T warm weather in early spring brought the pikeperch up Scriba creek, bu a sudden falling off in temperature caused them to return to the lake t spawn where our men could not reach them, and only 205 quarts of egg were taken. Of these 50 quarts were shipped to Caledonia, 50 quarts t Linlithgo and five quarts to Cold Spring harbor, leaving 100 quarts at the hatchery, which produced 12,750,000 fry. These were distributed to applicants in the immediate vicinity of the hatchery.

Three hundred seventy-six thousand brook trout fry and fingerlings were distributed to adjacent waters.

Five hundred thirty-four smallmouth brood bass were obtained and placed in six of the hatchery ponds. From this stock 417 cans of fry, representing 338,000 young fish were shipped to applicants; 50,000 fry were planted on the south shore of Oneida lake at Chittenango creek and 136,000 fry were planted at Long, Little and Wantree islands. At points on the north shore of the lake from Clough's point to Dakin's bay and points west to Philip's point, 54,000 fry were planted. Around Dakin's shallows 27,000 fry were planted and 50,000 were sent to the canal ponds at Fort Hunter to be reared to the fingerling size, making a total of 655,000 black bass fry distributed from this station.

The boat house and marine railway were completed during the past fiscal year. The boat house is a frame building 30 feet by 70 feet and is two stories in height. The first floor is used for storing the boats of the hatchery and the boat used by the game protective force. The second floor is used for storing nets and making general repairs. The boat house and marine railway fill a long felt want at this station.

St. Lawrence Hatchery. The total number of fish distributed at this station during the fiscal year was 22,223,697.

The catch of pikeperch during the spring was not as large as usual. This was no doubt due to the peculiar weather experienced at the time the fish were spawning. About 100 quarts of pikeperch eggs were taken at the field station at Pope's Mills. The station employees were handicapped to a large extent in taking these eggs by muskrats cutting holes in the nets and liberating fish which were held to ripen. About 100 quarts of eggs were also taken at Ogdensburg. This made up a total of about 25,000,000 pikeperch eggs taken, and from this number about 17,200,000 fry were hatched and planted — 3,000,000 being hatched at Pope's Mills and planted in the stream where the spawn was collected.

Five million yellow perch eggs were sent to the rearing ponds on the canals for further propagation and distribution.

One hundred eighty-seven fingerling maskalonge, ranging from 6 to 10 inches in length, were liberated in the St. Lawrence river.

Twenty-three thousand five hundred ten fingerling small-mouth black bass were planted in public waters of northern New York. The bass started to run the first week in May and by the twelfth of that month the ponds were stocked with brood fish, the majority having nested. About that time cold, freezing weather set in and a large part of the eggs were killed by the great change in temperature. The pumps were kept running to hold the water as nearly normal as possible, but the change was too great to save the eggs. This necessitated the catching of a new supply of brood fish by the foreman, 125 being taken. These fish hatched well. The prospects for a banner season in the beginning of May were very bright; but hindered as the work has been, an estimate on July 1st showed 100,000 fingerlings three-fourths of an inch long in one pond alone.

During the fiscal year the water mains were dug up and caulked and the rip-rap work pointed up. The sides of the ponds, where washed out, were filled and the penstocks repaired. The room back of the barn was converted into a garage by having double doors cut in, new windows installed and the necessary cement work, truss and braces put in to make a safe and substantial room for storing the truck and other machinery. The carriage room was also ceiled and harness closets built in, the stable ceiled and a new floor laid. All of this work was performed by the hatchery force without extra expense for labor.

With reference to the continuation of pikeperch work at this station in 1922, the foreman recomends that another type of hatching jar be used, as he finds that a jar having a rounder bottom hatches a better percentage of eggs than the one now in use.

If it should be decided to continue the pikeperch work at this station in future, it is recommended that an additional building be constructed, and that a battery with a capacity of about 200 jars be installed. At the present time the hatching work is carried on in the pumphouse; but owing to a lack of space the work is done under difficulties.

Warrensburg Hatchery. During the past fiscal year two concrete tanks were built at this station, thus increasing the capacity of the hatchery by 100,000 fingerling fish. The grading around the ponds and buildings was finished and all the tile was laid from the new concrete tanks to the main drain tile. Tile was also laid and graded in the pine grove at the rear of the hatchery. A new truck with a carrying capacity of sixty forty-quart cans, has been assigned to this station. Some of the applicants who get their fish from this hatchery live long distances from the railroads and others have to take their fish long distances from the railroad stations to the waters in which they are to be planted. With these trucks it has been possible to deliver the fish at the homes of applicants and, in some cases, directly to the waters applied for, thereby getting the fish to their final destination in better condition than heretofore.

Summitville Field Station. This station has fulfilled its purpose, which was to supply fish for a zone that could not be reached except after a long journey. Brook trout fingerlings of two to three inches in length have been delivered to applicants in this section, which comprises portions of Ulster, Orange and Sullivan counties. Much of the distribution work has been done with a small Ford truck, although many applicants have called at the station for their fish. The fish were delivered at this station as fry by other hatcheries of the Commission because they could not be reared to the fingerling stage on account of congested conditions at the parent station. The field station was in operation this year from April until the middle of August, and the total cost for operating during this period was only $1,140.50. The value of the fingerling fish produced— based upon prices asked by commercial hatcheries — was in the neighborhood of $23,000.

Canal Ponds. The canal ponds yielded the following fish as a result of the season's cultivation:

100	Small mouth black bass fingerlings.
3,470	large mouth black bass fingerlings.
4,000	bullhead fingerlings.

There were left in the ponds as brood fish

254	large mouth black bass.
30	small mouth black bass.
427	bullheads.

The fish distributed to applicants ranged in length from 4 to 6 inches, and were probably the largest of their species ever put out by the State from any of its hatcheries. They were in splendid condition and greatly pleased their recipients.

In 1920 the production of fish from these ponds totaled 38,420. This included small and large-mouth bass, bullheads and yellow perch. The output for 1921 compares well with that of last year when the size of the fish taken from the ponds is considered. The cannibalistic habits of the species cultivated will account for the diminished number planted this year; but fish culturists will agree that the loss from this cause is not comparable to that experienced by many hatcheries where attempts are made to raise these species to the large fingerling stage. In 1920 the fish were removed from the ponds in July while this year the distribution was completed in September.

FISH DISTRIBUTION

A glance at the comparative distribution for the last five years indicates a falling off this year as compared with that of other years. This is accounted for by the exceptionally advanced spring of 1921 which induced very early spawning of many fish, especially of those which ascend streams for that function. Because of climatic conditions, the fish spawned in deep water inaccessible to the spawntakers. Notable decreases occurred in the distribution of shad, lake herring, smelt, maskalonge, pikeperch, yellow perch fry, tomcod, flatfish and lobster.

Fish Distribution by Stations From January 1, 1921, to December 31, 1921

Adirondack	8,225,876
Bath	982,176
Caledonia	26,067.157
Chautauqua	4.212,240

[6] The Whitefish were produced from eggs collected by the Adirondack hatchery.

One hundred thousand Brown Trout eggs were sent to the Bath hatchery and 201,600 to the Delaware hatchery for development and distribution.

Fifty-three thousand seven hundred sixty Rainbow Trout eggs were sent to the Bath hatchery, 72,000 to the Delaware hatchery and 55,200 to the Linlithgo hatchery for development and distribution.

Thirty thousand Brook Trout fry were sent to the Linlithgo hatchery for further development and distribution.

Fifty thousand Rainbow Trout eggs were sent to the Willowemoc hatchery at DeBruce for development and distribution in local waters and from this stock 21,600 were planted and are included in the above total.

Eighty-four thousand Brown Trout eggs and 24 Albino Lake Trout yearlings were given to the U. S. Bureau of Fisheries in return for courtesies.

[7] Maskalonge eggs from which 290,000 fry were produced were sent to the Adirondack hatchery for development and distribution.

[8] One hundred seventy-three thousand five hundred twenty Brown Trout eggs were sent to the Bath hatchery for development and distribution.

[9] Seventy-six thousand three hundred twenty Rainbow Trout eggs were sent to the Adirondack hatchery and 112,000 to the Delaware hatchery for development and distribution.

One hundred thousand Rainbow Trout eggs were sent to the Commission of Inland Fisheries, Providence, R. I., in exchange for courtesies.

[10] One hundred ninety-five thousand eight hundred forty green Brook Trout eggs were received from Tuxedo Park in exchange for Smelt eggs.

[11] Five million three hundred forty thousand Smelt eggs were sent to the Michigan Fish Commission in exchange for Pikeperch eggs.

BUREAU OF MARINE FISHERIES

Receipts. The total receipts of the Bureau from all sources during the year amounted to $29,849.89, which was a small increase over the previous year.

During the year 11 perpetual franchises were surrendered to the State; 31 leases of shellfish grounds were assigned back to the State; 21 leases expired; three new leases were issued, and two renewals of leases were granted for a further term of 15 years; 83 sanitary certificates were issued, setting forth that the shellfish from the grounds mentioned therein were fit for food. Other licenses granted were lobsters, 77; fish food licenses, 45; menhaden licenses, 15. There were 55 recordings made, and five applications for shellfish lands were filed in the Bureau; 123,428 pieces of imported and domestic game were tagged; and 13,500 tags were sold to licensed game farms and clubs under the supervision of special game protectors. At the close of the year 556 perpetual franchise grants and 174 leases, together covering 21,084.6 acres of shellfish grounds, were in force.

Collection of Shad Eggs. The State boat, " Rednav," has been in continuous commission throughout the entire season, and during the month of May was in the Hudson river at Kingston, assisting in the collection of shad eggs. During this period several million of these eggs were gathered and sent to the State hatcheries for hatching. After the completion of this work, the boat was employed in Raritan Bay and Long Island Sound, repairing and erecting signals in connection with the usual survey work of the Bureau and testing out the sanitary condition of the shellfish beds with Dr. Parsons, Federal bacteriologist, and Engineer Robert Micknas of this Bureau.

New Signals. In addition to the regular initial and relocation surveys of the Bureau, which have been carried forward, a number of new signals on which the location of the shellfish areas and boundaries depend, were erected during the year: also repairs were made to other signals wherever necessary. A new type of signal was introduced, which is preferable in many respects to the older type of wooden tripod. The new signals consist of galvanized angle steel towers, the upper parts being boarded and painted. As this type of signal has a greater height and surface than the older type of signal, it is visible from a much greater distance, which is of advantage, as the signals are sometimes observed from positions on the water seven miles away.

Inspections have been made with the aid of the State boat to determine the positions of natural growth shellfish areas, and also to locate the positions from which shellfish were taken for bacteriological analysis.

A survey was made during the month of May to determine the positions of marking buoys inclosing the shad spawning area in the Hudson river at

Kingston, so that the positions could be plotted on the government charts covering this area.

Frequent inspections also were made during the season to determine whether shellfish areas were being illegally planted; also to check the boundaries of the leased shellfish beds, in order to determine whether the shellfish planters were cultivating a greater area than that embraced in the leases. A new set of tracings was made, showing the location and area of each shellfish lot granted by the State, these maps being of assistance to the planters, as they show the relative positions of the leased areas, and the areas available for leasing.

DIVISION OF LANDS AND FORESTS

The work of this Division has been during the year one of marked advance in forest progress.

Many substantial acquisitions of property as additions to the State Forest Preserve have been made; the property which the State now has in its Preserve has been protected from trespass more efficiently than before; hundreds of miles of line have been run re-establishing the boundaries of the Forest Preserve property.

The past year has been one of extraordinary drought, accompanied with more fires than ever before reported, and our fire protective system has been taxed at times to what would seem to be a breaking point, but the organization was able to cope with the situation, and the forest fire loss is far less than might be expected.

Reforesting work has gone steadily forward until now we have one of the largest forest nurseries in the world, millions of trees have been supplied to private owners, and some planting has been done upon the Forest Preserve.

Much effort has been expended in increasing the availability of the Forest Preserve as a playground and recreation field for the people through the building of trails, fireplaces, lean-tos, and other improvements of this character; manuscripts have been prepared, pamphlets printed, lectures given, and other work of this kind performed.

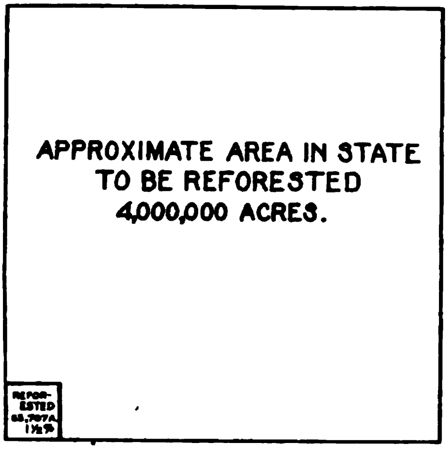
Experiments have been conducted in relation to the control of the white pine blister rust, and this work has been put on a firm and substantial basis, and the vital part of the problem, namely, the eradication of currants and gooseberries upon white pine areas has proceeded more rapidly than ever before, and many thousands of acres of land in the white pine belt have been cleared and made safe from the inroads of this disease.

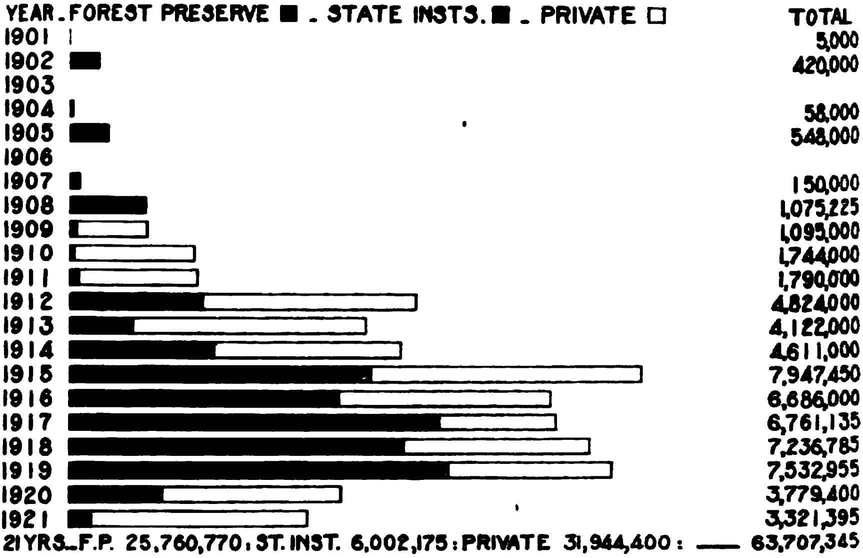
Various small parks and reservations under control of the Division have been cared for, improvements made, and the property protected; and a very decided advancement has been made which was possible through co-operation with the United States Forest Service in increasing the fire protective system to cover the other forest regions of the State not heretofore under the protective organization.

The Forest Preserve. The land which has been acquired by the State for forestry purposes in the twelve Adirondack and four Catskill counties is by law defined as the Forest Preserve. In extent it consists of nearly 2,000,000 acres. The parcels are of varying size, including all conditions of prevalent topography, forest type, and lands and water scattered through the Adirondack and Catskill regions. A great deal of the field work in connection with the protection of this property is done without increased cost to the State through the services of the forest rangers when they are not engaged in forest fire protection work.

Trespass. There is a slight increase over last year in the total value of the timber cut in trespass cases, which is accounted for by the fact that $213, or substantially one-half of the value of the material computed, was cut in three cases where the trespassers claim title to the land adversely to the State. Practically all the other cases were due to the indefinite condition of lines, and the trees were cut by the owners of adjacent land. The work which the Commission has done in protecting State land and the punishment which has been meted out to trespassers have demonstrated that timber cannot be cut upon State land without the trespasser suffering a severe loss. The reports which have been received of trespass upon the Forest Preserve during the calendar year are twenty cases, in which the aggregate value of the mateial is computed as $433.37.

PROGRESS IN FOREST PLANTING





PREPARED BY THE DIV. OF LANDS & FORESTS
CONSERVATION COMM. STATE OF NEW YORK.

Occupancy. One of the big problems which the Department has had for many years is the illegal use of the Forest Preserve, usually beginning in a small way, which, if left undisturbed, ripens into a larger use and soon an adverse claim of title and eventually an attempt to alienate the State's interest. During the past year our rangers have continued to scout the Forest Preserve; have detected several heretofore unreported cases of occupancy; and diligent efforts have been made to get the people to vacate. As a result in practically every case where new occupancy has been reported during the year the place has been vacated already. In regard to the cases heretofore reported, people have either vacated or a reduction has been made by transmitting such facts as we have to the Attorney-General with an order to prosecute. There are now but twenty-six cases remaining out of nearly one thousand, and this office must make further investigation into these cases and either have the people vacate or issue an order for prosecution.

Boundaries. The location of the property lines of the Forest Preserve is becoming of greater importance each year. Some years ago State land was conspicuous on account of its poor quality, but during the last two decades or more the State land has been better protected; the private land has often been lumbered, and today the situation is reversed. The State land is distinctive on account of the fact that there is now upon it the best timber in the Adirondack and Catskill Forest sections.

With the increase in value, determination of these lines became more important and at the same time the field work is becoming more difficult, for the reason that a majority of the surveys fixing these boundary lines was run more than a century ago, and the lines were monumented by blazing trees, some of which are now dead, many decaying, and the lines are fast becoming obliterated, making the field work more difficult and expensive.

The purpose in establishing these boundary lines is threefold: First, surveys are usually made on account of the fact that there is some particular necessity for surveying the line at the time; second, to monument the lines when established, nickel bolts being used for this purpose, and third, the purpose is to tie these surveys one to another and work out a correct base map, tying in all the surveys into one complete map. The establishment of lines is of great assistance in preventing trespass, aiding the local ranger in knowing where the State property is located; and its value in the future when the old land marks have disappeared cannot be easily measured. About seven parties have been engaged in field work of this kind during as much of the year as weather conditions permitted.

Reforestation. There was an area of approximately 120,000 acres of land in the Forest Preserve, which, on account of fire and misuse, were not through natural means within a reasonable time becoming covered with a forest. Therefore, planting on so much of this land as had sufficient soil was desirable. Such planting was commenced in 1902 and has continued each year. During this time approximately 25,700 acres of this land have been reforested. The amount of planting during the past year has been less than in any year since 1913. This is due to the fact that during the war for various reasons we were unable to maintain the productive capacity of our nurseries. There were fewer trees available this year than usual, and practically all of such trees were sold to private owners for reforesting. The nurseries are, however, becoming rehabilitated, and there will be stock available for increased planting the coming year.

Acquisition. There has been comparatively little land offered for sale to the State during the past year, and for this reason the amount of land acquired is less than for several years past. Much of the field work in connection with acquisition has been in examining land, collection of data, and preparation either for settlement of pending claims on account of appropriation or getting together necessary data for preparation of witnesses for trial of such cases. A list of the lands, the title to which has been approved by the Attorney-General during the year, will be found elsewhere in this report. The area of land not heretofore approved for acquisition, but which the Land Board has consented to acquire during the year is 18,526.79 acres

During the past year the Land Board has approved the acquisition of the

Indian Pass Brook, a high stream source of the Hudson River, perpetually protec
by State owned forests

steep slopes at the headwaters of the Elk Lake Watershed, the acquisition of nearly all of the John's Brook Valley, and a parcel of about ninety acres on the north side of Lake Placid, including some shore frontage upon the lake. The Shore Owners' Association of Lake Placid has agreed to contribute $15,000 without condition as part of the purchase price for this property, and steps are being taken to obtain covenants from the various owners upon Lake Placid, providing for permanent forestry upon these lands. Many other smaller parcels have been acquired both in the Adirondacks and Catskills during the year.

Area. The area of the Forest Preserve changes each year. It is increased largely through purchase. Some changes are made on account of surveys, which show a larger or smaller area than that for which the parcel has been carried upon our books. There is some decrease due to litigation, where the courts decided the State never had title to the land. The following is a statement of the area as of January 1, 1922:

FOREST PRESERVE AREA.

January 1, 1922.

Adirondack Preserve:

Additions:			
Acquisition	11,906.12		
Correction by surveys	48.82		
		11,954.94	
Losses:			
Correction by surveys		288.90	
Net gain			11,666.04

SUMMARY.

Adirondack Preserve	1,854,324.83
Catskill Preserve	138,191.34
Total	1,992,516.17

The reductions are due to litigation which has been prosecuted by the Attorney-General's office, involving land in which the courts have held that the State did not have title; also some small parcels of loan mortgage land which, when carefully examined, were ascertained not to be forest preserve in accordance with the statutory definition. In reality the State has not lost any land, but there has simply been a determination that these parcels were erroneously upon the list of parcels constituting the forest preserve. These parcels are nearly all outside of the limits of either the Adirondack or Catskill park.

Recreational Uses. Continuing the policy inaugurated in 1920 for the construction of public camp sites and trails, a program of work for the season of 1921 was prepared in this office before the season opened. This program necessarily had to be curtailed because of the failure of the Legislature to make specific appropriations for this work. Because the principal item of expense was for labor, we were able to make some headway through utilizing ranger labor for construction of camp sites, trails, etc., during periods of wet weather. While the unusual weather conditions made it impossible for the rangers to be spared for this work except for a small portion of the time, a considerable showing has been made. Over 100 miles of trails were cleared and about half this mileage was marked with the special metal trail markers adopted by the Commission for that purpose, and 100 board signs were put up to mark junction points on these trails. Ten open camps were built. Many of the fireplaces prepared for public camp sites along the highways had to be repaired and in addition to putting the old fireplaces in good condition 47 new ones were built. The following table shows the work done in the different districts:

Summary of Trail, Open Camp and Fire Place Work, 1921

District	Miles of Trail Cleared	Number of Open Camps Built	Number of Fireplaces Built
1	12	2	4
2	43	0	6
3	30	0	6
4	18	6	21
5	0	2	10
Totals	103	10	47

Use of Cedar Point by Campers, July, 1921.

The public camp sites provided by the Commission attracted a great deal of favorable comment from persons traveling through the forest preserve. A new edition of some of the recreation circulars was prepared early in the season and distributed in response to requests received by mail and in other ways. There has been a tremendous demand for these publications. The camps have been used a great deal and those along the main traveled highways have hardly been vacant a night during the tourist season. There is no question but that these camps have already paid for themselves in the prevention of forest fires, for they serve the double purpose of concentrating camping at certain definite points and what is even more important, of providing suitable places for campers to build their fires so that these fires are less likely to escape and do extensive damage to the woods.

Lake George Islands. The improvements which have been made in the last few years have been kept in repair and the islands protected from erosion. The use of these islands for camping and recreational purposes has been increasing from year to year. During the past season these islands have been far more popular than ever and at times it has been almost impossible to care for all the campers. A ranger maintains headquarters in a new house which has been built on Glen Island. He looks after the campers, issues permits, protects the islands from fire, and enforces the necessary sanitary regulations.

St. Lawrence Reservation. The land owned by the State consists of nine separate parcels at various points along the river in the vicinity of the Thousand Islands. At these places there are docks and pavilions. During the past year a new pavilion has been built on the recently acquired park at Long Point on Chaumont Bay. An additional dock has been built on Goose Bay at Kring's Point, and another dock is being constructed on Mary's Island. The increased use of automobiles has made these parks more accessible to people, and has made necessary the building of roads, in order that those parks which are upon the mainland may be reached more readily. A new road has been constructed across a reservation which the State owns to the Kring's Point property. Other short roads at Burnham's and Cedar Points have been very much improved. The Roosevelt highway traverses the road a short distance from the river. It has recently been completed, which will result in the increased use of these lands.

State Park Sign at Long Point, St. Lawrence Reservation.

Cuba Reservation. A decided improvement has been made in the general appearance and the use of this reservation, which consists of a lake and a narrow strip of land surrounding it in southwestern New York. There have been issued nearly 200 leases to small cottage lots, and during the past few years many fine cottages have been built, the older ones improved, and a decided change has been made for the better in the general conditions on this reservation. These leases have been granted subject to certain rules of the Commission, and we now plan further sanitary requirements, in order to better protect the health of the campers on this property.

John Brown Farm. The old barn, which occupied such a conspicuous site, was of unsightly character, and no part of the property used by John Brown, has been moved to a proper place and rests on a concrete basement. This adds greatly to the tone of the surroundings. There should be erected a bungalow for use as a home for the caretaker and the old John Brown home restored to its original form by removing additions in the rear which have been built in recent years. The house should be used solely as a place for visitors after restoration. A new road should be built around the grave and tablet bringing people to the front of the house instead of one end as at present, where there is parking space for cars and the house is best seen. An entirely new attraction can easily be made by making a short road to the east on the edge of the bluff where one of the excellent mountain views is afforded.

Increasing Demand for Camp Sites. While there has been a general and increasing use of the Forest Preserve for recreational purposes under the rules adopted by the Commission, which permit transient and temporary use for camping purposes and are limited to such on account of the provisions of the Constitution and the statute, there has been noticed an increasing demand for use with structures of a more permanent character.

The present use is confined to tents and open camps, which satisfy the needs of many, but there are numerous others who desire to erect modest camps of permanent nature under a proper authorization from the State.

An Adirondack Cruise Carry.

Article 7, Section 7 of the State Constitution prohibits the lease, sale or exchange of any part of the Forest Preserve, and, therefore, nothing of this kind can be permitted on account of the Constitutional restriction.

There are probably but few people who realize the extent of the advantages which are offered for camping. There are more than 1,150 miles of water frontage in the Forest Preserve lands, exclusive of the islands in Lake George, and there is no doubt but that one-half, or 575 miles, is admirably suited for camp sites. If this entire frontage were divided into camp sites with 200-foot frontage each, there would be approximately 15,000 available sites. Of course, not all of such camp sites should be leased, and a sufficient portion should be left for transient and temporary camping purposes. Comparatively speaking, this shore line is equivalent to more than seven times the frontage of Lake George, exclusive of the islands; or the shore line of Lake Ontario from Fort Niagara to Cape Vincent; or more than both sides of the Hudson river from its mouth to its source. It is, therefore, at once apparent that there are sufficient sites for both transient and permanent camper, also for those who can and those who cannot afford to pay a rental. The Department has had experience in recent years in leasing camp sites on the Cuba Reservation, and from what has been observed there we see no reason why this principle would not be applicable to lands in the forest preserve. Such camp sites are rented by the Federal Government in the National forests and by various states in their forest reservations. If a change were made in the Constitution permitting the leasing of camp sites, there would be a satisfaction of the demand which is now being made and a very large continuing revenue would be obtained by the State therefrom. It is further believed that the leasing of camp sites would be beneficial to the State in that a lessee would become permanently interested in the immediate locality where he had a lease, and would bcome a game protector and fire warden, both of which would be advantageous.

Use of Dock at Watterson Point, July 19, 1921.

FOREST FIRE PROTECTION

Weather conditions in the fire towns of the Adirondacks and Catskill regions during the fire season of 1921 were such as to produce the greatest fire hazard known in this State in the thirty years for which records of forest fires are available. Deficiency in precipitation (the May rainfall was only 43 per cent of the normal), particularly in the northern part of the Adirondacks, was accompanied by unusually high winds and temperature above the normal, so that what little rain fell was promptly evaporated before it had a chance to saturate the ground.

The exceptionally light snowfall of the winter disappeared very early in the spring, but dry weather and occasional frosts prevented the appearance of any considerable amount of green vegetation until along in June. Therefore, the fire hazard in the normally dangerous spring season was intensified and subsequent drought conditions in the summer and fall months maintained the hazard until November.

More fires were reported in 1921 than in any previous fire season for which records are available. The total of 726 is well above the highest previous figure of 688 in 1913. In spite of this, the area burned in 1921 was held down to one-half that burned in 1913 and to about one-sixteenth of the area of the fires of either 1903 or 1908.

The comparison with previous years bears eloquent testimony of the efficient manner in which the fires of 1921 were handled by the ranger force. The average area burned by each fire in 1921 was 37 acres, as against 80 acres in 1913 and 47 acres in 1920. Comparison is made with these years because they are more nearly comparable with the present year than others within the life of the present protection system.

Fire warnings were issued to the public in the form of cardboard fire notices sent out to the field force for posting in suitable places. In spite of the large number of fires caused each year by the carelessness of the traveling public, it is felt that these warnings are exerting a considerable influence in preventing fires from this cause, because they help to educate the public.

As a further means of calling attention to the forest fire danger, the Commission early in the spring recommended to Governor Miller that he proclaim a "Forest Protection Week." The week selected for this purpose was that beginning Sunday, May 22, 1921. Inasmuch as this was one of the worst weeks for fire in the entire season, the Governor's proclamation was particularly timely and was accompanied by considerable publicity in the press, with the result that a very large number of persons had this matter called to their attention.

Following is the text of the Governor's proclamation:

PROCLAMATION

STATE OF NEW YORK — EXECUTIVE CHAMBER

The Empire State possesses in its forests a treasure vast in extent and enormous in value — a resource that must be protected, perpetuated and increased if the prosperity of the State and its people is to continue. Our forests are at once a heritage from the past and a hope for the future.

Fire is the greatest enemy of the forests and constant vigilance on the part of all our people is necessary if the fire demon is to be held in check.

Now, therefore, I, Nathan L. Miller, Governor of the State of New York, do hereby proclaim the week beginning Sunday, May 22, 1921, as

FOREST PROTECTION WEEK

and I call upon every citizen to do his utmost to spread broadcast the word of caution regarding forest fires — so easily started, spreading so rapidly and so terribly destructive,— and to create a universal appreciation of the worth and importance of our forest heritage.

GIVEN under my hand and the Privy Seal of the State at the Capitol in the city of Albany this seventh day of May in the year of our Lord one thousand nine hundred and twenty-one.

[L. S.]

(Signed) NATHAN L. MILLER.

By the Governor:
W. WARD SMITH,
Secretary to the Governor.

In connection with enforcing the provisions of the Conservation Law devised to obtain better fire protection from forest fires along railroads, our inspectors made over 5,000 examinations of locomotives during the year. These vary from cursory inspections of locomotives in service to detailed inspections of locomotives in the repair shops and round houses. At the same time, our inspectors checked up the reports of inspections kept by the railroad companies themselves in compliance with the law.

Railroad rights of way were inspected and arrangements were made by the inspectors to secure the broadcast burning of particularly dangerous portions of rights of way prior to the opening of the fire season. This system has been found most effective in reducing the fire danger along railroad lines. In fact, on the lines of the Long Island railroad, the Commission relieved the railroad company of the necessity of establishing a patrol where the right of way had been burned broadcast in the spring to a distance of at least 200 feet on each side of the track.

It will be remembered that during the season of 1920, the New York Central lines operating through the Adirondack region, were temporarily relieved from the necessity of using oil burners as required by the 1909 order of the Public Service Commission and other orders continuing that requirement. In the early spring of 1921, the railroad company requested relief from the necessity of burning oil through the season of 1921. However, at the

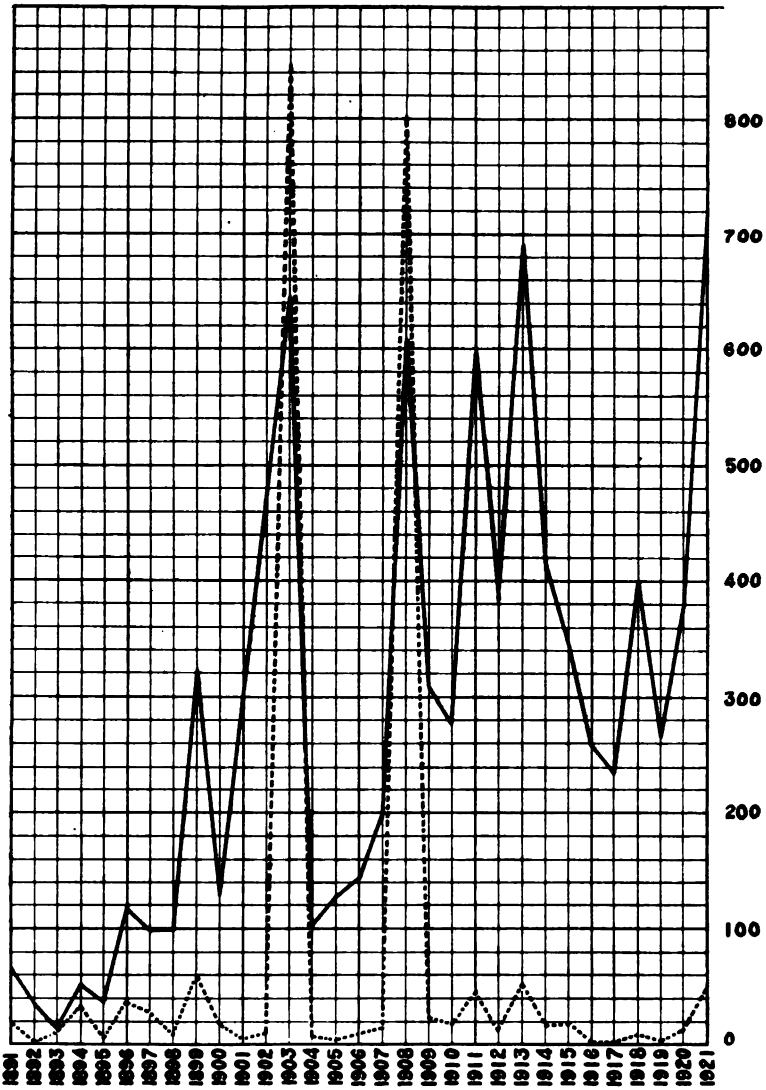

DIAGRAM SHOWING THE RELATION BETWEEN
THE NUMBER OF FOREST FIRES ———, &
DAMAGE IN THOUSANDS OF DOLLARS ……………………

PREPARED BY THE DIV. OF LANDS & FORESTS
CONSERVATION COMM. — STATE OF NEW YORK.

time the application was made and the hearing held before the Public Service Commission, the Conservation Commission felt that it would be unsafe to grant such relief, particularly during the spring months, especially so since the lack of snow during the winter made it seem reasonable to forecast a particularly serious fire season. Moreover, the railroads admitted that oil could be obtained. The fact that oil could not be obtained in sufficient quantities was the reason for relieving the railroads from necessity of burning oil during the season of 1920.

At the hearing before the Public Service Commission in the early spring the railroad companies agreed to defer their request until a later date. Several postponements for further hearings on the matter followed, and finally the railroad company agreed to drop the matter for the season of 1921. It is felt that it is particularly fortunate that oil burning was required throughout the season because of the severity of the fire hazard and likelihood of fires being started with coal burning locomotives.

Adirondack and Catskill Fire Towns

Following is a classification of the fires of the year according to causes:

Smokers	212	Lumberjacks	12
Locomotives	127	Children	9
Fishermen	118	Burning rubbish	6
Campers	66	Bee hunters	4
Lightning	47	Fireworks	1
Burning brush	38	Transmission line	1
Berry pickers	23	Burning auto	1
Hunters	26	Tractor	1
Incendiary	17	Boiling sap	1
Burning buildings	16		
			726

An explanation should be made of the 127 fires reported as caused by locomotives. These fires covered only three per cent of the total area burned. These were practically all on the outer edges of the fire towns and did only small damage.

Smokers caused the largest number of fires, being credited with 212 fires covering 11 per cent of the total area burned and doing nine per cent of the damage.

Fishermen were responsible for the third largest number of fires. These caused 118 of the total number, and to their carelessness is due the burning of 9,082 acres, with a damage of $19,110.

An unusually large number of violations of the laws relating to slash disposal and forest fires have been reported during 1921. A decrease in the number of violations of the top lopping law is noted, but the very considerable increase in violations of the fire laws is probably due to the favorable conditions for setting fires to clear land and to the close watch kept by the protective force which resulted in practically every violation being discovered and reported.

Summary of Violations of Fire Law, 1921

December 1, 1920 to November 30, 1921.

OFFENSE	Total number of cases reported	Number of cases closed	Amounts recovered
Failure to lop tops (Sub. 2, Sec. 54)	27	27	$820.00
Causing forest fires (Sub. 3, Sec. 54)	56	52	790.28
Setting fires to clear land (Sub. 5, Sec. 54)	37	36	206.39
Refusing to fight fire (sub. 14, sec. 51)	1	1	....
Failure to maintain railroad patrol (Sub. 1, Sec. 55)	....	1	....
Operating defective locomotives (Sub. 3, Sec. 55)	....	2	117.50
Totals	121	119	$1,934.17

Protective Measures

It is regrettable that owing to insufficient appropriation promotion of rangers according to the scheme of efficiency rating adopted some years ago, has had to be temporarily suspended. A record of each man's work has been kept, however, so that the rating can be made at any time when funds are available to provide for suitable promotions.

Equipment of observation stations has been kept up and renewed where necessary. A new steel tower has been erected on Ampersand Mountain station in Franklin county. A site for a new observation tower in the town of Newcomb, Essex county, has been selected on Goodenow mountain. A steel tower has been secured for this station with the extensive cooperation of landowners and lumbermen operating in that vicinity, and it is hoped to have this station in full operation by 1922. This new station will take the place of Dunbrook Mountain station, which was abandoned in 1919.

New cabins for the observers were erected at Hurricane and Vanderwacker mountains.

Continuing our policy of equipping all fire observation stations with the panoramic maps, we have during the past season installed panoramas at fourteen stations, as follows:

St. Regis, Azure, Whiteface, Hurricane, Wakeley, West, Moose River, Woodhull, Stillwater, Beaver Lake, Bald, Cat, Loon Lake, Mt. Morris.

Panoramas have been prepared for the following fourteen stations and will be installed early in the season of 1922:

Belfry, Poke-O-Moonshine, Lyon, DeBar, Ampersand, Owls Head, Kempshall, Adams, Vanderwacker, Boreas, Pharaoh, Swede, Gore, Crane.

The panoramic maps have been prepared by one of the foresters and in connection with the preparation and installation of these maps it has been possible to give important instructions to the observers regarding their work, to obtain an excellent inspection of the observation stations, and by this work to keep the office in closer touch with the operation of the observation stations.

The public has been encouraged to visit the fire observation stations, and as a result 30,578 visitors were registered at the stations during the year. Before the season opened, the observers were supplied with copies of annual reports and other literature published by the Commission and urged to familiarize themselves with this material in order that they might give information to visitors. In this way it is felt it has been possible to explain the objects of our fire protection work to a large number of persons who might otherwise not know of it.

Continuing the policy inaugurated in 1920, we have constructed additional public camp sites with fire places, and open camps. These will be discussed in more detail under the heading of "Recreational Development," but mention is made of it here because of the great importance of this work in keeping down the number of fires started by campers.

Powerful Fire-fighting Outfits

A tremendous improvement in the efficiency of our fire protection work was accomplished during 1921, by the purchase of a number of portable gasoline forest fire pumps. The outfit selected is one which has been developed primarily for the purpose of fighting forest fires. During the early part of the year when we found that this outfit had passed the experimental stage and was admirably adapted to our use in the Adirondacks, we purchased three of these pumps. The pump and engine weighs only about 125 pounds and can easily be carried anywhere in the woods by two men. It consists of a two-cylinder, two-cycle gasoline engine developing 4 to 5 horse power, to which is attached a rotary geared pump. As much as 1,500 feet of one and one-half-inch hose may be attached to the pump, so that the range from available water supplies is very considerable.

Without these pumps it would have been impossible to make the good showing in fire protection which was made during this past exceptionally severe fire season. Three of the pumps were purchased by the Commission in May and later in the summer four additional outfits were purchased for the Commission by the United States Forest Service, in accordance with its cooperation under the so-called Weeks Law.

Experiments have shown that one of these pumps is equivalent to seventy men on a fire line. Therefore, it is not at all surprising that these pumps have all paid for themselves during the present season in the saving of labor which they have effected.

Enforcement of the laws relating to the leaving of slash along and adjacent to highway rights of way has been continued. No prosecutions for violation of these statutes have been made, but the removal of the material in question has been secured in all cases, except those now pending.

Forest fire pump in action. One will do the work of a large crew of men using old methods.

At the beginning of this report, mention was made of the conditions prevailing during the fire season. This resulted in 726 fires in the fire towns, which burned 26,663 acres, and did damage estimated at $49,920. It will be noted that a large proportion of the area burned was land which had previously been burned over and that the damage to timber was comparatively small. Only six hundredths of 1 per cent of the total acreage was virgin timber. The proportion of State land burned was 12 per cent of the total. Summaries of forest fire losses by both counties and causes are attached hereto. A summary of fires according to months of occurrence is also submitted.

State Wide Forest Protection

The work of the Department in fire protection is no longer confined to the fire towns of the Adirondack and Catskill regions. For two years our fire protection system has been in effect on Long Island. This is not as intensive a system as is maintained in the fire towns where the State land is located and where timber values are greater, but a tremendous quantity of forest land is located outside the Adirondacks and Catskills and it is absolutely essential for the protection of the wood-using industries of the State that these other lands be also given adequate fire protection.

On Long Island we operated two observation stations throughout the season and one station during the greatest fire danger of the spring months. Our district ranger has been on duty continuously. The observation stations reported 144 fires. Word was given promptly to town supervisors or fire wardens. The district ranger has been able to bring about better organization of the fire wardens in the various towns, and plans are under way for the towns to purchase additional equipment specifically designed for fighting forest fires. A total of 102 fires has been reported from the Long Island district during the year. These are estimated to have burned over 11,110 acres, and damaged property to the extent of $780, a marked improvement over 1920, when 101 fires burned 17,365 acres.

A forest fire engine. Two men can carry it anywhere in the woods.

New Fire Districts

Through greatly increased allotment of Federal funds by the United States Forest Service, it has been possible during the year to greatly increase work in State-wide fire protection, that is, fire protection outside of the area of fire towns. In August, after the conference with representatives of the Forest Service, four new district rangers were appointed, the salaries of these men being paid out of the Federal funds allotted for that purpose. One of these men was assigned to each of the following districts:

1. Eastern District, comprising Washington, Rensselaer and Columbia counties.
2. Southeastern District, comprising Putnam, Dutchess, and Westchester Counties.
3. Southern District, comprising Sullivan (outside of fire towns), Orange and Rockland counties, and also that portion of Ulster county not included in the fire towns.
4. Western District, comprising portions of Cattaraugus, Allegany and Steuben counties which are well timbered.

The boundaries of the various districts have been closely drawn, but the new district rangers were instructed as to their duties and sent out into the field to map the districts assigned them in order that we might have accurate data as to the location of forest land, its condition as regards fire hazard and other information necessary in planning fire protection work.

While this work is only begun, it has received the enthusiastic approval of persons who have become familiar with it, and has already stimulated efforts of local town officials in securing better fire protection. The district rangers have been instructed to start in as soon as possible to assist in obtaining an official organization of town fire wardens and the effects of their work are already beginning to be felt.

Weeks Law

Mention has been made above of the cooperation offered by the United States Government under the so-called Weeks Law. While under this arrangement in 1920, the Government contributed about $6,000 towards the

The Celebrated Indian Pass From Lake Henderson. The Mountains (Wallface On the Left and McIntyre On the Right) Were Added This Year To the Forest Preserve.

cost of fire protection in New York State, the agreement for the present year contemplates the allotment of nearly $25,000 by the Federal Government for cooperation in fire protection. This money is made available for the purchase of gasoline fire pumps and hose referred to above, also for the employment of district rangers outside of the area of fire towns and also for the employment of men in our fire protection organization within the fire towns, for work on observation stations, fighting fires and constructing necessary permanent improvements, such as trails, camp sites, etc., as they may affect the fire protection work.

The greatly increased cooperation offered under the Weeks Law this year marks the recognition of the Federal Government's rsponsibility in assuring the country adequate fire protection. It is particularly useful to New York State to have this assistance which makes possible the extension of State-wide fire protection to areas which have long needed it and which, if given fire protection, can contribute extensively to the forest crops produced in the State.

REFORESTATION

It is now twenty years since reforestation was initiated by the State Forestry Department. Beginning with the production of trees for planting State land in 1903, the policy of reforestation was broadened in 1907 providing for the sale of trees for reforesting privately owned land at the cost of production.

In 1915 a resolution of the Commission was passed, which provided for the furnishing of trees to municipalities for reforesting publicly owned land at a special rate of fifty cents per thousand.

In 1920 a bill was passed by the Legislature providing for distribution of free trees to private land owners, under such regulations and safeguards as the Commission deems necessary. Also, during the present year, provision was made for furnishing trees free to municipalities for reforesting publicly owned land.

The following table gives a summary of tree distribution over a period of twenty years, and this table shows that during this time 31,700 acres of State owned land and 31,900 acres of privately owned land have been reforested, assuming that 1,000 trees are planted per acre:

TREES PLANTED IN NEW YORK STATE

1901–1921

YEAR	State institutions	State forest preserve	Total state land	Total private land	Total per year
1901	....	5,000	5,000	....	5,000

1913	804,000	76,000	880,000	3,242,000	4,122,000
1914	908,000	1,094,000	2,002,000	2,609,000	4,611,000
1915	1,141,450	3,030,000	4,171,450	3,776,000	7,947,450
1916	862,000	2,875,000	3,737,000	2,949,000	6,686,000
1917	1,065,800	4,059,120	5,124,920	1,636,215	6,761,135
1918	426,000	4,213,100	4,639,000	2,597,785	7,236,785
1919	107,800	5,160,100	5,267,900	2,265,055	7,532,955
1920	51,500	1,257,425	1,308,925	2,470,475	3,779,400
1921	135,625	165,000	300,625	3,020,770	3,321,395
	6,002,175	25,760,870	31,762,945	31,944,400	63,707,345

The planting of trees by private land owners during the past year has shown a remarkable increase over the previous year and has exceeded the pre-war record of 1916. We have experienced a shortage of stock owing to the fact that during previous seasons we have been unable to obtain sufficient seed of the desired species. It is a well-established fact that forest trees only produce good crops of seed at intervals of 3 to 5 years. Owing to this fact, red pine seeds were obtainable for sowing this year for the first time since 1915. Advantage was taken of the excellent crop of this seed and enough secured for sowing in the spring of 1922. However, funds are not usually available to take advantage of such a condition and it is usually necessary to buy only a sufficient quantity of seeds for the current year and to reply upon seed produced that year or held in storage by seed dealers and placed on the market at increased prices.

Newly developed portion of Saratoga Nursery, showing areas transplanted in the Spring and Fall of 1921 — Approximately three million transplants included in this picture.

Nurseries. Owing to the small amount of stock in the nurseries during the past season, opportunity has been given for growing cover crops to improve the soil. Ten acres of cover crop were sown at Salamanca nursery and fifteen at the Adirondack nurseries. A larger area of land was cleared at the Saratoga nursery, making a total of about eighty acres available for nursery work at that place. The ground available for producing trees at the present time is as follows:

Saratoga Nursery	80 acres
Adirondack Nurseries	22 acres
Salamanca Nursery	10 acres
Central Islip Nursery	3 acres

All of the above area is not at present occupied by tree growth and it is not intended that all this area should be occupied with tree growth at one time, provision being made for the rotation of crops, a green cover crop to be grown upon the land every third year.

Trees were shipped from the various nurseries as follows:

Saratoga	2,109,170
Saranac Inn	488,700
Salamanca	182,025
Central Islip	210,500
Comstock	176,000
Rome	155,000

Fall transplanting was undertaken in the nurseries this year on a larger scale than ever before. At the Saranac Inn nursery 855,000 white pine seedlings were transplanted during the month of September, and at the same time in the Saratoga nursery 2,545,900 were transplanted. Previous experiments have shown that fall transplanting proved successful on light sandy soils and by so doing much of the work which has usually been crowded into the short planting season in the springtime can be accomplished and labor more efficiently used.

An inventory of the stock on hand in the nurseries November 1, 1921, shows an increase over the inventory of a year ago of 5,922,700 trees, and a total of 21,842,550 trees.

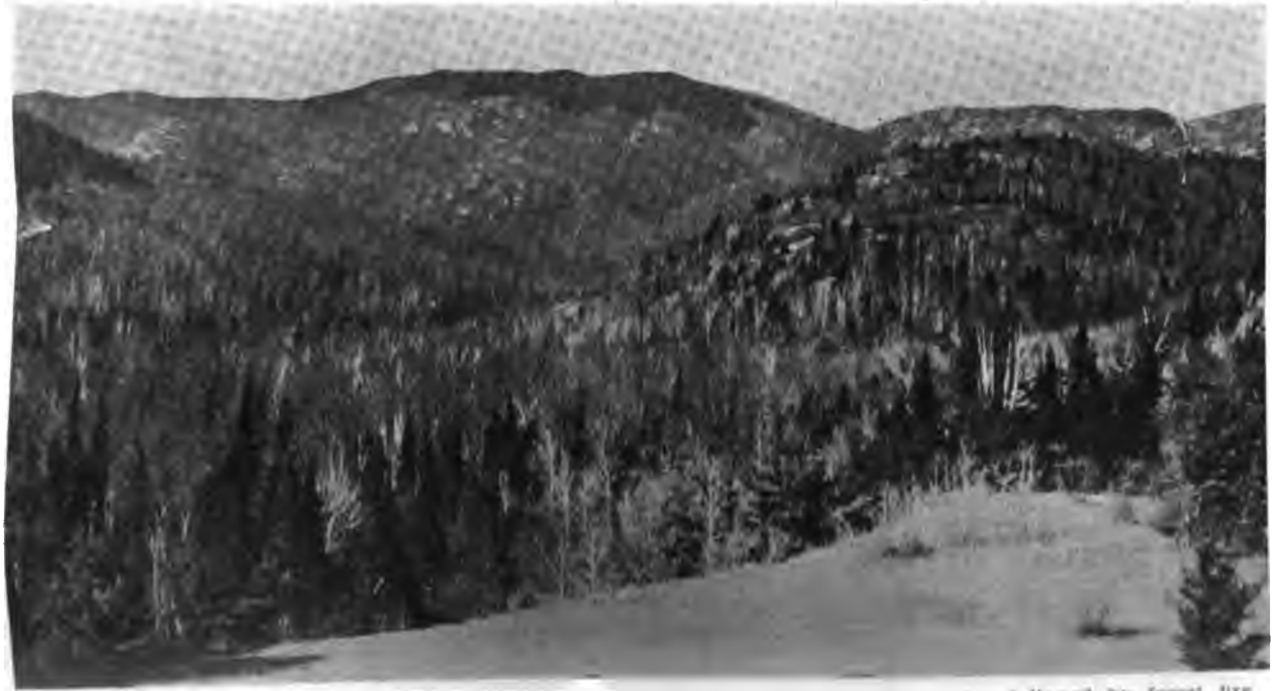
The total number of trees distributed from State nurseries amounted to 3,321,395, of which

2,489,670 were supplied to private land owners.
531,100 were supplied to municipalities.
135,625 were supplied to State institutions.
165,000 were used for reforesting State land in the Forest Preserve.

The species and number of trees distributed were as follows:

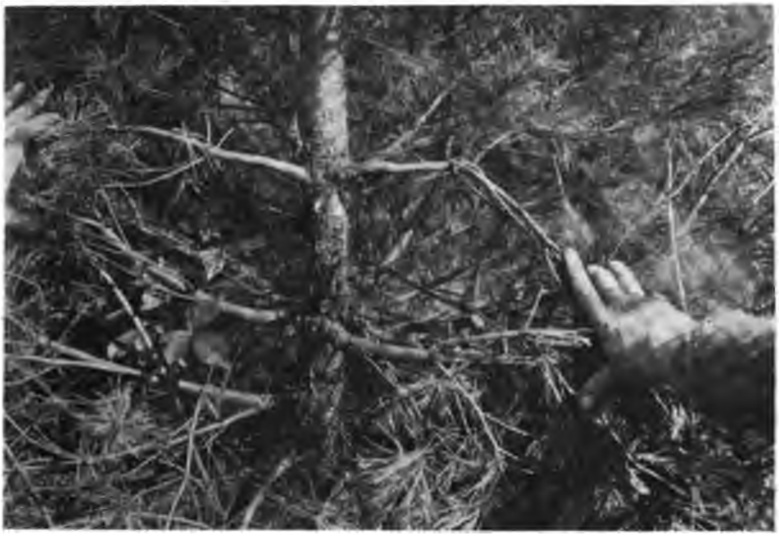
White pine 6 yr. transplants	6,500
White pine 5 yr. transplants	25,500
White pine 4 yr. transplants	48,000
White pine 3 yr. transplants	106,670
White pine 2 yr. seedlings	20,500
Scotch pine 5 yr. transplants	6,500
Scotch pine 4 yr. transplants	496,075
Scotch pine 3 yr. transplants	812,750
Scotch pine 2 yr. seedlings	65,200
Red pine 5 yr. transplants	11,000
Norway spruce 5 yr. transplants	500
Norway spruce 4 yr. transplants	739,250
Norway spruce 3 yr. transplants	375,450
Norway spruce 2 yr. seedlings	132,500
White spruce 3 yr. transplants	159,250
White spruce 2 yr. seedlings	500
White cedar 4 yr. transplants	21,950
White cedar 3 yr. transplants	120,650
White cedar 2 yr. seedlings	1,500
European larch	1,000
Black locust	53,300
White ash	9,750
Carolina poplar cuttings	97,600
Carolina poplar rooted cuttings	9,500
Total	3,321,395

Free Trees. Free trees provided for under the "Free Tree Bill," chapter 460, Laws of 1920, will be ready for distribution during the spring of 1922. Only two-year seedlings will be available under this act next spring, as the law was interpreted to provide for the growing of trees with funds specifically appropriated under the law. Rules and regulations for distributing trees under the provisions of this law have been prepared by the Commission and will be ready for distribution during the early part of next year. The requirements to be met in order to secure free trees are merely that the trees are to be properly cared for, the land is to be reforested and protected, and every necessary care taken to insure the establishment of a plantation. No rules for the cutting of such trees have been laid down at the present time, since a great many years will elapse before any cutting takes place, and it appears to be better judgment to leave the establishment of rules of cutting until such time as the timber may be ready to be cut. The free tree law



Mountain slopes in Eastern Adirondacks. Their thin forest covers show result of lumbering followed by forest fire. Black Forest on [illegible] summit, not lumbered. Large areas of virgin forest land on similar slopes recently have been acquired [illegible] similar conditions provides for the making of an agreement and filing copy of agreement in the county clerk's office of the county in which the land is located. Therefore, in order to secure trees under the provisions of this bill, application should be made far enough in advance so that there will be plenty of time to comply with the requirements of the law before the planting season.

Reforesting State Land. During the spring planting season 165,000 trees were planted on State land. The small number of trees planted was due to the fact that private land owners purchased the balance of the stock which was available for distribution during the spring planting season. No fall planting was undertaken on State land since the amount of three-year stock is limited, and it is safe to predict that all of this stock will be taken by private land owners during the spring planting season. During the fall of 1922, however, there will be a large quantity of stock suitable for reforesting State-owned land, and an increased appropriation will be necessary in order to maintain the nurseries at their present capacity and at the same time accomplish any great amount of reforesting on the Forest Preserve lands.



White pine trees with blister rust. Note the contracted irregular form where disease is present. This tree probably will die the coming year.

White Pine Blister Rust

Eradication work for checking and controlling the spread of the white pine blister rust has been in progress since 1916. During these five seasons the work has enlarged from a small sphere of experimentation to one of definite policies, due to information obtained in regard to the disease itself and methods of control.

The work for the season 1921 was done accordng to a program which included —

(1) Eradication of ribes on State and private land, using the accepted seven-crew method;

(2) Cooperation with private owners and one municipality in eradicating their pine lands;

(3) Demonstration field work and experiments to obtain data on (a) effectiveness of past complete eradication of ribes in control of the disease; (b) per cent of trees infected on different areas;

(4) Scouting of the entire State to determine exact situation in regard to spread and status of infection on the pine throughout the State;

(5) An educational campaign among pine-land owners by means of personal interviews, bulletins, illustrated publications;

(6) Pine survey to determine acreage and location of separate classes of young and mature pine in the white pine belt.

The white pine belt west of Lakes George and Champlain, containing about 1,000,000 acres was divided into four districts, each in charge of an agent who had several foremen in charge of the actual eradication work. At present the agents are making a survey of the disease on the pine throughout the State. During the winter months they are employed on pine survey and educational work among pine-land owners.

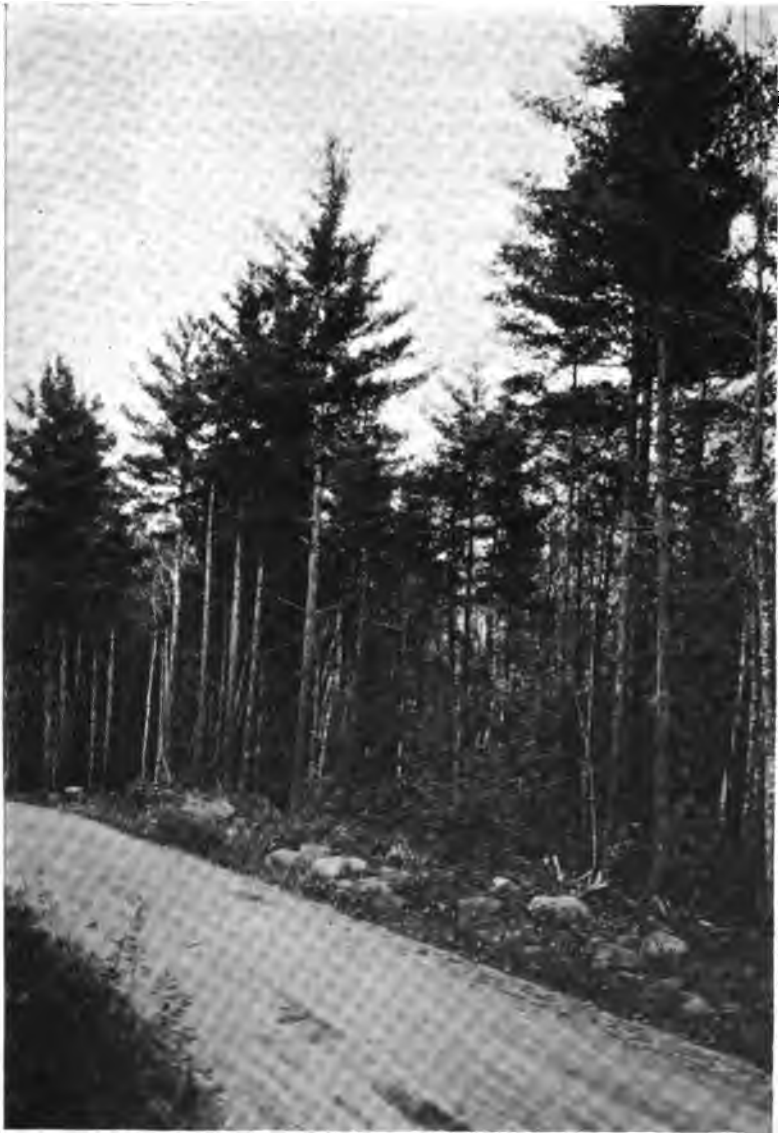
Eradication Work was done at various places on both State and private lands. On State land 448 acres were worked at Sugarbush; 247 acres at Goldsmith; 5,608 acres at North Hudson; 274 acres at Bolton and Hague; 521 acres at Wilmington; 1,090 acres at Axton and Cross Clearing. At all of these places there were plantations of white pine made from 3 to 18 years ago in sections where the gooseberry and currant bushes were numerous and in close proximity to the pine. Cooperative eradication was done at various places in Essex and Warren counties on private land where the owners paid for their proportionate part of the work. Work of this character covered 5,894 acres.

Checking. The effectiveness of control methods depends on as near complete eradication of gooseberries and currants as is possible in the field. To keep up efficiency of the field work, check inspections are necessary and checks were made which showed that 95.4 per cent of the bushes were removed the first time over. Inspections at various times behind the crews showed careful work done.

Educational. Work was done throughout the year by State and Federal men along educational lines. Wherever possible, landowners were taken to badly infected areas and shown the disease and its destructiveness on the ground. The most effective way of impressing the landowners with the extent, life history, and destructiveness of the disease is to actually get them onto a badly infected area. This has been done extensively at Jay, Wilmington, Willsboro, Lewis, Elizabethtown, North Hudson, Chestertown, Warrensburg, Bolton and Glens Falls. Early in the spring letters, reports and pamphlets were sent out to known landowners to acquaint them with all phases of the disease and methods of eradication throughout Warren and Essex counties.

Policy. Up to July 1, 1920, part of a Federal appropriation had been available each year for cooperative work with the State and private landowners for the eradication of gooseberries and currants (the alternate host of the disease in the dissemination of the spores which spread the disease. Since then the State has gone ahead with the work on a cooperative basis. However, considerable cooperative work was done previous to July 1st and some since then.

The State should continue to interest owners of pine land and cooperate in eradication work, but each year place a larger share of the actual eradication expense upon the individual. Gooseberry and currant bushes can be eradicated and thus the host of the rust removed. In a very few years, over a large area of the white pine belt of the State, unless eradication is done where the gooseberries and currants grow in close proximity to pine, the future supply of the white pine will be at an end, as the disease is very destructive and insidious in its development on the young growth. Observations this year show the disease to be obtaining a strong foothold in areas before only slightly infected. Up to this year but few areas had been seen



Natural white pine forest. This land was under cultivation thirty-five years ago, Town of Lewis, Essex County.

which showed impressively the destruction of young reproduction. The disease on young pine has now reached the stage where visible destruction of young pine under twenty-five feet high can be seen extensively. Unless the eradication of gooseberries and currants on pine land as a means of control is increased manyfold in this and the next few years, the reproduction of young growth will be cut off completely and the future of the white pine as a species seriously threatened. We will have lost one of our most valuable timber trees, a source of necessary lumber supply and a plant that is especially adapted to poor lands as a means of making them produce a valuable crop, and enabling these lands to be productive. Control work under present field methods of eradication will protect the pine and at a cost not prohibitive to any landowner.

Meeting of State Foresters

The second annual meeting of the Association of State Foresters was held in the Adirondacks, September 20, 21 and 22. State Forestry officials representing the states of Colorado, Oregon, Maine, Maryland, Massachusetts, New Jersey, New York, Ohio, Pennsylvania, Vermont, Virginia, West Virginia and Wisconsin were present, together with officials of the United States Department of Agriculture, and the Province of Quebec. The first two days were spent in showing these foresters the white pine blister rust situation at points in Warren and Essex counties. On the third day an exhibition was given of our fire fighting protective system and observations made of the general forest conditions on the Hudson watershed. These foresters were convinced of the importance of strenuously fighting the white pine blister rust, and resolutions to that effect were adopted, asking not only for liberal State appropriations but also for Federal assistance in the work.

FOREST PRODUCTS

According to the requirements of the law, figures are herewith submitted showing the material manufactured by the mills in this State from the product of the New York State forests. The figures are for the year 1920, for the reason that it is possible to get these figures together only after several months work after the end of the calendar year; therefore, statistics of this kind are for the period one year prior to that covered by the report.

RECOMMENDATIONS

It is recommended that in view of the double objects accomplished in the erection of public camp sites and the clearing of trails, namely, providing safer places for campers and at the same time opening up the Forest Preserve to the public, the appropriation for this kind of work should be continued.

Because of the high rates of wages existing in other kinds of employment, this Department recommended a few years ago that the rate of wages paid to fire fighters be increased. An amendment to the Conservation Law made by chapter 461 of the Laws of 1920, established the legal wages for fire fighters at thirty cents per hour, and of fire wardens and foremen at fifty cents per hour. Since this law went into effect there has been a decrease in wages paid in other lines of employment, and it is recommended that the law be amended to provide that fire fighters and fire wardens shall be paid at the rate of " not more than twenty-five cents and forty cents per hour. respectively." It is highly important that the wages paid for fire fighting be kept below the going rate of wages in other lines of work or there will be persons who will set fires for the purpose of securing employment fighting them.

Mention has been made in this report of the excellent work done by the gasoline forest fire pumps which were procured during the season of 1921. These outfits, complete, with 1,500 feet of hose, cost in the enighborhood of $800 each. The usual appropriations made for equipment are inadequate to permit the acquisition of a sufficient number of these pumps as rapidly as is advisable. We could profitably use one of these pumps for each of our sixty-five rangers. We now have only six pumps on hand. It is, therefore, recommended that specific appropriation for the purpose of acquiring these pumps be made available in sufficient amount to equip all the ranger force within the period of five years.

SCHOOL DISTRICT REFORESTATION

The privilege of acquiring lands for forestry purposes which is now extended to school districts under the Conservation Law, makes possible the profitable utilization of many acres of land now entirely nonproductive, and the stimulation of interest in the science of forestry among school children who could apply the knowledge, a little later, on the home farm with profit to themselves and benefit to the State.

The Conservation Law provides that a city, town or school district may acquire by purchase or gift or take over lands in its possession, and use the same for forestry purposes.

The governing board of the county, city, town or school district may appropriate money or issue bonds either for the purchase of lands to establish forest plantations or for the care of forests. Such boards are empowered to undertake such work at regular or special meetings by majority vote after two weeks' public notice, setting forth the fact that such a plan is contemplated, and that money is to be appropriated for such purpose.

Tree planting is becoming part of the school curriculum in many places.

The law authorizes the Conservation Commission to assist and advise such boards in reforesting work, and to furnish trees for reforesting such publicly-owned lands without charge, provided they are planted in accordance with instructions of the Commission.

The law further provides that the net income from such lands shall be paid into the general fund of such municipal divisions, and shall be used only upon order of its governing board.

The best uses of our forest resources and natural forest lands can be gained only through careful education of the public in regard to the need which exists in order to furnish a sufficient supply of lumber for the future.

In the town of Constable, Franklin county, ten acres were donated to the school district, and under the direction of the Farm Bureau agent the children, during last year and this, have planted 10,000 trees on these ten acres — half white pine and half Scotch pine. The land has been fenced by the district.

Need of Scientific Forestry

The practice of scientific forestry in the United States has not in the past appealed strongly to lumbermen or timberland owners because of the fact that cheap areas of standing trees have always been available. Without a definite or comprehensive policy for the future, most of them have seen no reason why the production of a second crop of timber should trouble them as long as untouched areas could be purchased for less money than it would cost to produce a new forest crop — to say nothing of the length of time required to produce it. Furthermore, they are not inclined to allow the cutting or removal of timber to be hampered by sparing the smaller trees, a practice which would probably give a second cut of timber within the next twenty-five or thirty years, but which means nothing more to the present operator than an immediate market loss of any timber he leaves standing. The presence of cheaper timber in other localities has encouraged the lumberman to make a "clean job" of each of his operations and then move elsewhere.

Men and Women in Planting Gangs.

The principal centers of supply for lumber are now the southern states, the Lake states, the Pacific Coast, Canada and Alaska. When these sources of wood and lumber are exhausted, the industries using wood materials must turn back to the cut-over lands for whatever wood supplies have chanced to grow upon them or else produce lumber by reforesting.

Communal Forests

The establishment of communal forests is one important way in which provision may be made for a future supply of wood products. The idea of public forests is rather new in this country. Although a certain amount of reforestation and scientific woodlot management has been performed by State agencies and individual landowners, the possibilities of a practical forestry undertaking as an industry in a community are only just beginning to be appreciated. The greatest obstacle seems to lie in arousing the interest of a sufficient number of people in the project and getting the plan started.

Nearly every locality in New York State has large or small tracts of idle or nonagricultural lands. They are not producing any material income: in fact, they are usually held by their owners at a loss through nonincome on investment and outgo due to taxes. These areas, if they are situated reasonably close to settled districts, and are, therefore, capable of supervision, accessible for operation and near to means of transportation, could, under a system of scientific forest development, be converted into a definite community asset.

Evergreen trees grow slowly during the first years. Seed beds of one-year old trees in the Saratoga State Nursery. These beds average more than five thousand trees each.

Town Forests Profitable. Practically every country in Europe has tested out the town forest and found it a profitable investment. In addition, the town forest is a local industry. The city of Zurich, Switzerland, employs regularly one man for every thirty-three acres of its forest, and in the winter and times of industrial depression it employs more. Many small towns in Europe have no taxes to pay, and in some cases the citizens receive a dividend from the forest. The desirability of receiving a check instead of a tax bill is too obvious to call for comment.

The oldest artificially planted forest in Europe is the Frankfort Town forest. Scotch pine trees planted there 200 years ago have reached diameters of thirty-six inches, and a single tree, when cut, has yielded as much as 4,100 board feet of lumber. White pine and Norway spruce planted in mixture have yielded, when sixty years of age, at the rate of 35,000 board feet per acre.

It is not necessary that communal forests be started by the planting of trees. In most localities, woodlands can be purchased at a relatively low figure, which are already fairly well stocked with second growth and may also contain a considerable number of merchantable trees which are suitable for fuel or for other purposes. In acquiring such areas, therefore, the municipality might be able to secure enough revenue from the administration of the forest to pay the cost of operating it. At the same time, new trees could be introduced, in order to fill up all available ground and thus secure a completely stocked stand.

Planting Denuded Land. Land which has been competely denuded of timber growth can be returned to forest production by planting the proper number of small trees. The trees must be so spaced that each will have all of the soil, moisture, air and sunshine which it can profitably use. In practice, this has been found to be at a distance of about six feet apart each way, which will require about 1,200 trees per acre. The Conservation Commission maintains nurseries for the production of such trees in various localities in the State. Trees grown in these nurseries are sold for reforesting privately-owned lands at cost of production, and for reforesting publicly-owned lands at the nominal price of fifty cents per thousand trees. Under the provisions of a bill passed by the 1920 session of the Legislature, seedling trees become available for free distribution in 1922.

Evergreen Seedlings From Two Years of Age are Transplanted to Aid in the Better Development of Their Root Systems.

The actual work of planting is simple and can be done successfully and readily by anyone. It is best done by two persons working as a team, one with a grub hoe to make holes, the other with a pail of trees to do the planting. Such a team, if active, can plant 1,000 trees a day.

After about ten years the trees will have developed so that the side branches commence to interlace, and other vegetation upon the ground is killed by the shade. The tree then begins to have full use of the soil. As soon as the side branches are interlaced, the light is gradually cut off from the sides of the trees and the lower branches are shaded and die. The forest is, therefore, self pruning, the stems of the trees contain a minimum number of knots, and the trees grow straight and tall. The result is that the tree when cut yields a high grade of lumber.

Income from Sale of Timber. The principal advantages derived are a perpetual income from the sale of timber, employment of persons in connection with the cutting and sale of timber, and the benefits that come from a forest cover. These latter benefits are not to be discounted; they include the regulation of the run-off of streams, the prevention of snow slides and earth slides, shelter from winds, protection to birds, game and fish, and a beautiful and healthful playground for old and young.

Three-year old transplants of Scotch Pine being pulled and made ready for shipment.

The following is a concrete example of how a community forest might be useful in defraying the taxes of a town or school district. The cost of maintaining a one-room school in most of our rural districts is from $800 to $1,200 per year. White pine plantations have been found to yield 40,000 board feet of lumber per acre when 40 years old, or an average of 1,000 board feet of lumber per acre each year. In such a case, a forest of from 60 to 80 acres in area would produce an annual yield of from 60,000 to 80,000 board feet of lumber, having a stumpage value of about $15.00 per thousand board feet or a total value of from $900 to $1,200. Or in other words, a school forest would make the school self-supporting after the first trees planted had come to maturity. In a large majority of our rural school districts there is more than twice this area of idle land which could be used for forestry purposes. Such a forest can be established by planting from one and one-half to two acres of land to young forest trees each year for a period of forty years. All the work of planting in a proposition of this size could be done by the school children in connection with their Arbor Day exercises, or a planting team of two men could supplement the work of the school children and plant six acres in a week, if quicker results were desired.

The State Conservation Commission is urging upon local school boards throughout the rural sections of the State the great need of putting into effect a program similar to that outlined above. A small tract of woodland operated in connection with a school would offer many advantages along educational lines other than teaching the principles of forestry. It would afford a place for field excursions in nature study, biology and botany, and if conveniently located, could become a community center for picnics and local gatherings.

A Good Start in the Production of Marketable White Pine Lumber has Been Attained in Twenty-one Years, Dutchess County, N. Y.

Many Advantages of a School Forest

The lessons learned in reforesting in this school forest would soon be put into practice on the home farms of the school children, and the interest of the farmers and land-owners in the vicinity would be aroused. Many of the idle lands throughout the State are included within the area of our farms, and by developing interest among the many farmers in this way, great results can be accomplished, if only a little is done by each one of them.

A forest under proper management will maintain the fertility in the soil, and even increase it by adding large quantities of leaf mould and litter. Practically all the mineral plant foods taken up from the soil by the tree roots are returned to it again in the fallen leaves. What other industry can our cities, towns and villages build up, which, when finally established, will not only be self-supporting, but will yield a fair profit year after year without any diminution of the supply of raw materials used?

Planting Seasons. There are two seasons of the year when plantations of forest trees may be made. In New York State the first season begins in the latter part of March on Long Island, and continues often as late as

May 25 in the Adirondacks. Spring planting should be done before the buds have begun to make new growth. When trees are moved from a warm locality to a colder one for planting, the new bud growth often gets well started before the ground in which the trees are to be planted is ready to receive them. The reverse is true when the trees are moved to a warmer place for planting, since here the soil is ready long before the frost is out of the ground in which the trees have grown. For these reasons it is decidedly advantageous to have planting stock grown in the vicinity where the planting is to be done.

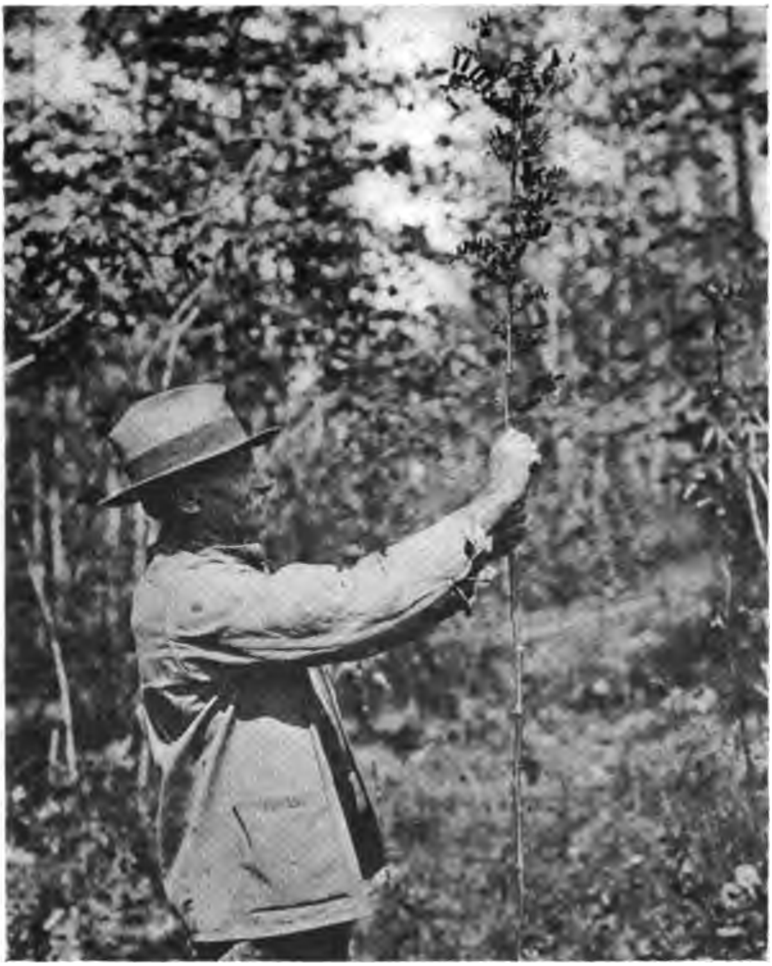
As a general rule, spring planting should be done as soon as the soil is sufficiently dry to be worked. On Long Island and in the southeastern part of New York State, this is about the last week of March and the first week of April. In the Adirondacks and the northern parts of the State it is usually not possible to begin planting before the last week of April.

A high yield of pulpwood per acre can be secured from this plantation of Norway Spruce at the age of twenty-eight years, Dutchess County, N. Y.

The fall planting season begins about the first of September in northern New York and ends about the last of October in southern New York and Long Island. In planting conifers in the fall, only transplanted stock three or four years old should be used; with seedling stock much loss may result from heaving of the soil. Hardwood species to be planted in the fall should not be moved until after the leaves have fallen.

In spring early planting is to be preferred in order that the trees may have the benefit of the spring rains. If planting is done too early in the fall, however, the trees may suffer from subsequent dry weather. But fall planting should be done early enough so that the soil will become well compacted about the roots by the autumn rains before the ground freezes; late fall planting is likely to result in heaving of the trees during the winter and early spring.

Trees that show a tendency to start their new growth very early in the spring — for example, the European larch — should preferably be planted in the fall.



This Farmer is Replenishing his Fence Post Material. Remarkable Growth Attained by Black Locust at the Age of Two Years.

Dividing the planting between the spring and fall seasons is often advantageous when sufficient labor cannot be obtained to do the required work in the short space of time afforded in only one planting season.

Kinds of Trees to be Used. There are a large number of species of trees that may be used for forest planting. For commercial purposes, however and for supplying materials needed for domestic use on the farm, only a few species are of real value. For New York State the most rapidly growing species and those giving the most valuable product are:

Conifers

White pine (Pinus strobus)
Norway spruce (Picea excelsa)
Red pine (Pinus resinosa)
Scotch pine (Pinus sylvestris)
European larch (Larix europaea)
White cedar (Thuya occidentalis)

Hardwoods

White ash (Fraxinus americana)
Red oak (Quercus rubra)
Black locust (Robinia pseudacacia)
Black walnut (Juglans nigra)
Tulip tree (Liriodendron tulipifera)
Basswood (Tilia americana)

Carolina poplar (Populus deltoides var.)

Soil Types to which Different Tree Species are Adapted. In general the different species of pine require sandy soils or sandy loam. European larch does well on upland loam soil, while white cedar thrives best in low, moist situations. Norway spruce does best on a heavy loam or clay soil. Hardwoods are best adapted to the better loam soils and clay soils. The trees best suited for growth in various soils are as follows:

Dry sandy soil

Scotch pine
Red pine
Black locust
Carolina poplar

Moist sand or sandy loam

White pine
European larch
White cedar
Black locust
Carolina poplar

Moist loam or clay loam

Norway spruce
White cedar
White ash
Black walnut
Tulip tree
Basswood
Black locust
Carolina poplar
Red oak

DIVISION OF SARATOGA SPRINGS

Greater Economy of Operation

The year just passed has been the best, in point of patronage, that the State Reservation at Saratoga Springs has ever experienced. Receipts from the bath houses during the cure season 1920–21 exceeded those of the previous year by nearly 23 per cent, and were the largest in our history. During the past season it has been possible to operate all the plants under our control with considerable more economy than in years past, due to a perfected organization, and to greater efficiency of labor. This constant increase in patronage from year to year points to a very satisfactory future for this division. The bathing business has passed the point where the cost of operation increases equally with the amount of patronage, and from now on considerably more profitable seasons may be looked for if no drop in the number of patients treated is experienced.

The following table shows the results of the operation of the Lincoln, Washington and Saratoga bath houses from July 1, 1921. to October 31, 1921, in which a deduction of $8,000 has been made from the estimated profits to cover the cost of repairs to be made to the bath houses before they are opened for next season:

	Lincoln	*Washington*	*Saratoga*
INCOME			
Receipts	$25,811 25	$17,258 48	$17,903 66
EXPENSE			
Fuel, light, power, water	$5,475 91	$3,646 86	$1,889 53
Supplies	452 51	290 46	483 51
Wages	5,944 97	5,576 52	5.807 01
Repairs	330 41	45 62	205 96
Laundry	1,797 54	1,348 16	1,348 16
Busses and trucking	895 13	684 58	340 47
Office	211 31	158 48	158 48
Est. repairs and painting before opening for next season	2,500 00	1.500 00	4,000 00
Total expense (estimated)	$17,607 78	$13.200 68	$14,233 12
Estimated profits	$8,203 47	$4,057 80	$3,670 54
Total for the three bath houses			$15,931 81

The above figures. it must be understood, are estimated so far as the cost of repairs and painting to put the bath houses in shape for next season are concerned. An allowance of $8,000 has been made in the above table to cover the estimated cost of this work so that the total estimated profits of the bath houses, as given in the table, will be increased or decreased by just the amount that the cost of repairs underrun or exceed the $8,000 estimated to cover this work. These expenses will be incurred during the present fiscal year and therefore should be considered in this connection.

Despite the fact that the water bottling business is being operated by a private corporation, under lease from the State, and despite the expenses and losses incident to the closing out of the Reservation's control of this business, a profit was realized from the income-producing departments of this division, amounting to $1,617.22. Among the items which tended to reduce the amount of this profit was a payment of $600 to our former Albany agent for bottled waters, because of his loss of business on account of the change in control and operation of the mineral water plants. A loss of approximately $1,100 was sustained in getting rid of our stock of bottling supplies after the waters lease went into effect, as nearly all this material had dropped in price since purchased by us. During the war period, pure drinking water was supplied to the Arsenal at Watervliet by this department. An endeavor was made to give a price on this water which was very near our cost for supplying it, but, because of two freight rate increases after the contract was made, the allowance which had been made in our cost figures for breakage was overcome. Thus, when the business was closed up early in the past fiscal year a loss of about $1,000 incurred in this war emergency had to be written off.

During the coming winter it is expected that approximately $10,000 in operating expenses will be saved by the closing of the Saratoga bath house for alterations and repairs. This bath house has been operated during the past few winters largely as an advertising proposition, and at a considerable loss; the amount of receipts being nowhere near large enough to pay the cost of operation.

View of the Avenue of Pines.

The alterations to this bath house will meet the requirements of physicians by providing a place where only patients being treated under prescriptions will be accommodated and where the patients will be assured at all times of competent attendance and proper medical supervision.

Parks and Roads. Owing to the small appropriation granted by the Legislature of 1921 for the maintenance of our 500 acres of park and eight miles of roads, it was impossible to carry out, during the past year, all of the work anticipated. The main road at the southern end of Geyser Park, which had been washed out over a year ago, by the breaking of the Geyser dam, was temporarily repaired and made passable for automobile traffic. This road, however, should be carried to its original width and resurfaced throughout. The same is true of a great many of the roads through Geyser Park, and a number of complaints on the condition of these roads have been entered at the Conservation Commission's offices at Saratoga Springs during the past season. The road from the Karista spring to Hathorn No. 2 spring and the Schenectady highway, which was proposed in the last annual report, could not be built because of lack of funds. A considerable amount of excavation was completed for this road, however, in taking gravel for the resurfacing of a portion of the "Avenue of Pines." This work of resurfacing was carried out to about 80 per cent of the total length of the Avenue, and all of the heavy summer traffic on the State highway was diverted to our road by a resurfacing job of the City of Saratoga Springs on Ballston Avenue. By the use of calcium chloride to lay the dust and a weekly scraping with a road hone, the Avenue of Pines stood up remarkably well under the large amount of traffic over the main north and south route.

Between the Hathorn No. 3 and Coesa springs, the shoulder of the road was widened about 12 feet to the east over culvert extensions which were put in by the State Highway Department. The west side of this stretch of road was also widened somewhat, thus allowing considerable more parking space and relieving the congestion of vehicles for tourists who stop to drink at these very popular springs.

A large amount of transplanting was done in the "Vale of Springs" in Geyser Park, and the old stone foundation walls about Champion No. 3 spring were leveled, which with a considerable amount of drainage has added this little valley to the beauty spots of the Reservation. Additional concrete settees and new concrete picnic tables have been placed in High Rock Park, in Geyser Park, near the Minnonebe spring, and near the Ferndell ravine. These tables are similar to those used at the Palisades Interstate Park and have proved to be a great convenience to picnickers and visitors.

Concrete sidewalk was laid on Phila street, west of Putnam street, thus completing the concrete walks leading to the Lincoln spring drinking fountain at the corner of Spring and Putnam streets. A considerable amount of concrete sidewalk was laid about the Lincoln swimming pool, doing away, to a large extent, with the tracking of sand and grass into these pools, thus making the work of maintaining them easier and less expensive.

The lawns at the west and south of the Washington bath house were roughly graded and trees and shrubbery set out to make these spots more attractive, until such time as an appropriation can be obtained for the proper grading and seeding of these lawns.

Wells and Springs. During the year constant inspection and control of the various wells and springs has been carried on, as usual. A very large number of water level readings and flow readings have been taken and tabulated. During the year, Champion No. 1, Clarke No. 2, Emperor, Geyser, Lincoln No. 8, and Natural No. 7 wells have been properly retubed and resealed. During the fall of 1921, it was necessary to retube the Hayes well, which is used to supply water to one of the separators of the carbonic acid gas compressing plant.

A new marble and granite fountain was installed at the Congress spring in Congress Park. This fountain has four outlets and affords better accommodations to the large number of visitors who take this water, besides improving the appearance of the Congress sunken garden. Free service of water was supplied throughout the year at the Old Red, Emperor, Peerless, Hathorn No. 1, Coesa, Clarke No. 2, Hayes, Polaris, and Ferndell springs. Four free service drinking fountains were provided for the popular Lincoln water.

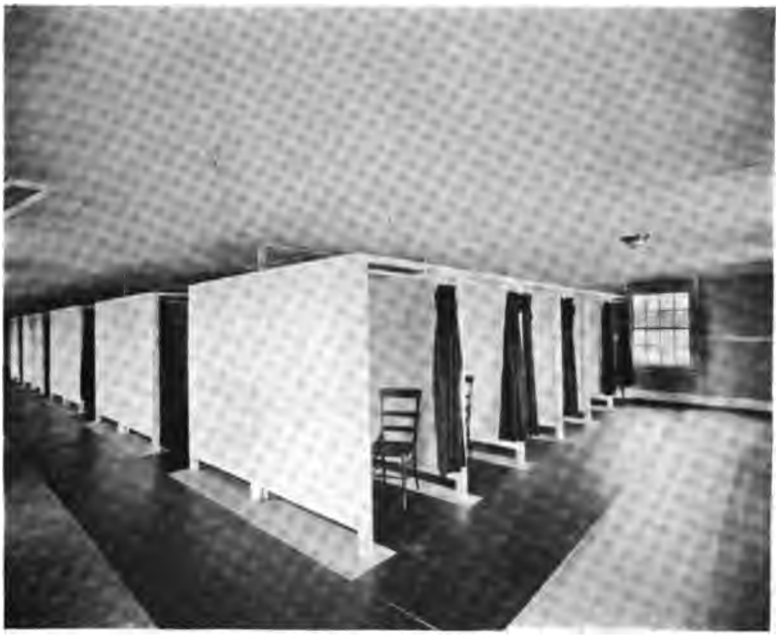
Large Increase in Business

During the fall of 1920 and winter of 1921, the work of altering and remodeling the second floor of the Lincoln bath house and the installing of bathing equipment there was completed. The second floor was supported by steel "I" beams and iron columns on concrete piers. A concrete floor was laid on which were placed twenty-eight bath rooms, with all equipment for the giving of mineral water baths. These bath rooms were built in the center of the south wing of the bath house and arranged with a wide corridor on all four sides, providing excellent light and ventilation in this wing. In the north wing of the bath house fifty-three dressing rooms were installed with proper toilet facilities. A new and wider stairway was constructed, leading from the main hallway downstairs to a large reception hall on the second floor. From this reception hall wide doorways lead to the bath rooms and to the dressing rooms, already mentioned, and to a large airy rest room in the front wing of the building. Additional ventilators were provided on the roof of this bath house, making this second floor addition as cool and airy as any of our bath houses. The results of its operation, during the past season, have already proved its popularity.

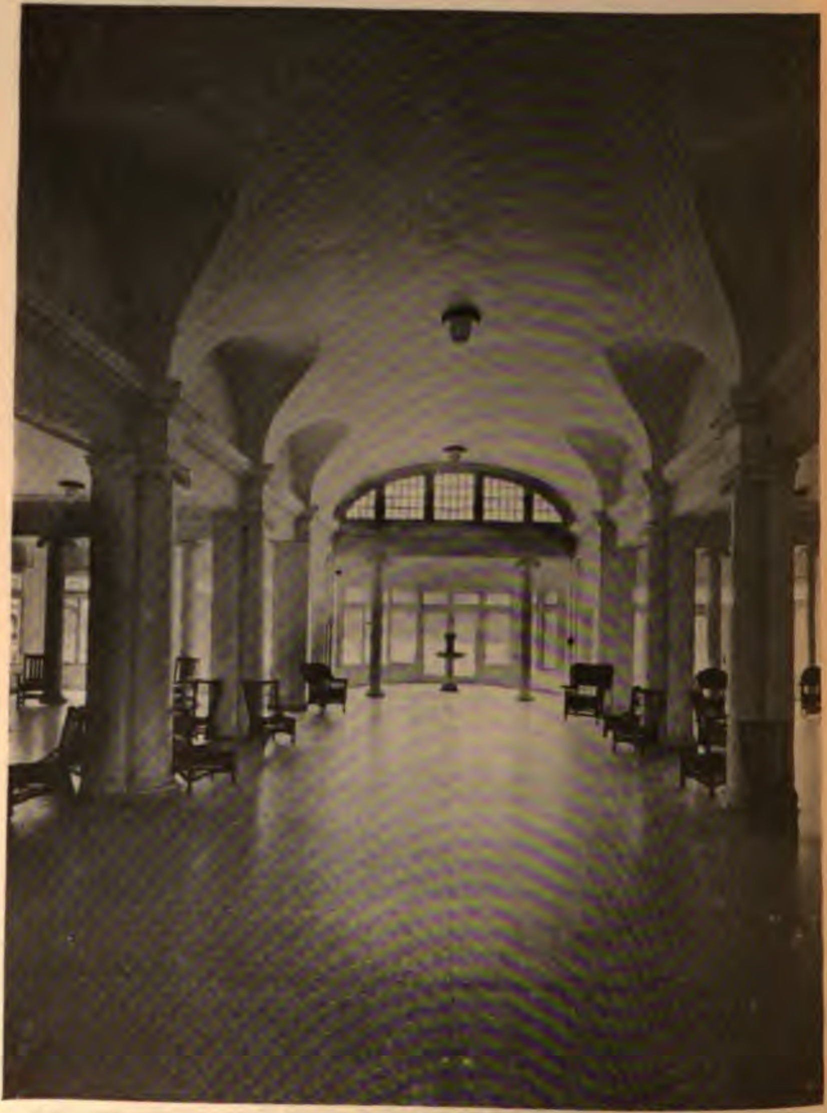
Rest Room, Upper Floor, Lincoln Baths.

During the season of 1920, 19,104 treatments were given at the Lincoln bath house, while in 1921, 28,140 were given, an increase of 9,636 treatments, or 50.4 per cent. As the Lincoln bath house was crowded to capacity during the season of 1920, all of these additional treatments were made possible by the second floor installation. The cost of this increase, in accommodations at the Lincoln bath house, was approximately $18,000. The increase in the gross receipts at the Lincoln bath house during the present season was $8,950.20, proving it to have been a thoroughly profitable investment. The total treatments given in all bath houses during the first nine months of the calendar years 1920 and 1921 increased from 52,558 to 58,998, or about 12 per cent. When business conditions throughout the country are taken into consideration, we believe this to be a very satisfactory increase. The receipts from baths for the first three months of the fiscal year 1921–22 increased from $49.588.77 to $59,963.98, an increase of 22.9 per cent.

At the Saratoga bath house, a great deal of difficulty has been experienced during the past year, because of the Turkish bath hot rooms which are located on the first floor of the building. It is necessary to run some of the mineral water supply and waste pipes through these rooms, and the intense heat causes a building up of the mineral content of the water on the inside of the pipes with a consequent stoppage of the flow. In some cases, it is necessary to clean out these pipes several times a year, causing a great deal of trouble and inconvenience during the season. It is proposed, and plans have been prepared by the State Architect to rearrange the first floor of this bath house, doing away with the hot rooms, mentioned above, and substituting for them, electric and hot air cabinets. These cabinets will be placed in a room which will be provided by flooring over the large plunge in the rear of the first floor of the bath house. The receipts from the use of this plunge have never provided an adequate return for its maintenance, and by the constructing of an extra room at this point, it will be possible to provide two suitable rooms for hydrotherapeutic installation, one on the men's side and the other on the women's side. Here will be placed the cabinets, mentioned above, douche stalls, control tables, shampoo tables, and all the equipment to equal that provided for special treatments at the new Washington bath house. In place of the present hot rooms, there will be installed three mineral tubs each on the men's and women's sides and one colon irrigation room on each side. These changes have been requested for sometime by the local physicians, in order that they may have a bath house in which only patients being treated under prescription from physicians will be accommodated, and where they may keep these patients under proper medical supervision, with the assurance of competent attendance and good accommodations.



Dressing Rooms, Upper Floor, Lincoln Baths.



View of rotunda, Washington Bath House, looking west.

These changes will also enable us to run the Saratoga bath house during the winter months at a much smaller cost than formerly, because the entire upper floor, now devoted to mineral water treatments, could be shut off for the winter and the small number of mineral treatments given during these months, could be accommodated in the tubs provided on the first floor. This will do away with the necessity of maintaining several extra attendants and will also reduce, by a large amount, the cost of heating the building. These changes will, if completely carried out as the doctors request, reduce our capacity for mineral water baths by a considerable percentage, if no patients but those having prescriptions from physicians are accommodated at the Saratoga baths. This will undoubtedly tend toward overcrowding at the Lincoln and Washington bath houses.

Engineering Department. All technical matters are handled by this Department, and construction and repair work of every kind is laid out and supervised.

During the year the installation of an additional 150 horse-power water tube boiler at the Washington power house was completed, and this boiler was in use throughout the 1921 season. The capacity of the low pressure side of the mineral water supply system was increased approximately 25 per cent, and the high pressure capacity was increased 50 per cent by the addition of a third duplex compound high pressure mineral water pump connected to draw from the 16,000 gallon tank in the Washington power house, which had previously been used as a high pressure tank. This change doubles the low pressure storage of mineral water for the bath houses, and enables us at all times to adequately supply every need of the three bath houses during the past season.

At the Lincoln No. 8 well, which is part of the mineral supply system, a new concrete pump pit was constructed entirely under ground and a large steam driven deep well pump put into operation here. This work removed from the space between the Lincoln and Washington bath houses the unsightly pump house which it had previously been necessary to maintain there. The installation of this steam driven pump also assisted in the increase of the low pressure mineral water capacity, mentioned above. At the same time, arrangements were completed for the use of Natural Carbonic Well No. 8, should this at any time be found necessary in maintaining an adequate supply of mineral water to the bath houses.

Throughout the piping system for mineral water the extra heavy wrought iron pipe formerly used is being gradually replaced with cast iron pipe laid with universal joints. It has been found that the life of this cast iron pipe in mineral water work far exceeds that of wrought iron. It can be laid as cheaply as wrought iron pipe, and the initial cost of the pipe itself is only a little greater.

In this connection it is well to call attention again to the fact that the four-inch wooden line pipe from the Lincoln tract to the Saratoga bath house and to the free service stations in the city of Saratoga Springs is in very bad condition. The maintenance cost of this line is high because of frequent breaks and leaks. A new cast iron line between these points would do away entirely with this maintenance cost for a great many years, and would obviate the necessity of operating a pressure pumping station at the Saratoga bath house, because a pressure of 80 to 100 pounds could be maintained on this new line, whereas 30 pounds is the highest pressure which the present wooden line will withstand.

The piping system for the disposal of waste mineral bath water from the Lincoln and Washington bath houses was materially increased in size before the 1921 season and should again be increased during the coming year to take care of the enormous amount of waste water which flows from these bath houses during a few hours daily. About 400 feet of tile sewer connecting the sanitary sewage system at the Lincoln and Washington bath houses with the city sewer was replaced with cast iron pipe and it is planned to continue these replacements as needed until the whole line is constructed of cast iron.

The line of copper steel pipe from Hathorn No. 2 and Coesa springs to the Geyser bottling works was taken up during the year and the one and one-fourth inch porcelain enameled lined pipe, which has been in stock for this purpose for a number of months, was laid in its place. In the operation it was possible to salvage for future use a considerable amount of three-fourth inch copper steel pipe and also a large amount of two-inch wooden pipe which was laid some years ago by the former Reservation Commission. This wooden pipe will be of considerable value to us in drainage work, conducting of fresh water, and similar operations when low pressures are obtained. This new one and one-fourth-inch porcelain enameled lined pipe had been in operation for about one month at the time of writing this report, and completely fulfilled expectations in the reduction of friction, the retention of gas content and the elimination at the bottling plant of the extra iron content in these waters which was taken into solution from the metal of the former pipe line.

View showing pergolas and lawn at Washington Baths.

The supply of fresh water to the Geyser bottling works for washing bottles, boiler feed, and similar purposes, was increased about 25 per cent at the request of the Saratoga State Waters Corporation by constructing a concrete wing wall about 50 feet south from the present reservoir to impound additional water. This wing wall was constructed from the surface of the ground about six feet down to an impervious clay stratum found there, thus intercepting and diverting to use at the bottling plant all the ground waters in an additional area.

The old coal bin at the Hathorn building was torn down and replaced by a new and larger one at the request of the Saratoga State Waters Corporation and thirty squares of new galvanized roofing was laid on the boiler room of the same building.

As soon as the contract for the marketing of liquified CO_2 gas was signed, the compressing plant in Geyser park, formerly operated by the General Carbonic Company, was completely overhauled and put into operation. The water supply to the gasometer and also the plant for cooling and boiler feed purposes was placed in condition for advantageous operation. Plans are now under way for the installation of additional water supply during the winter months to insure against freezing of the water in the gasometer and at the plant itself.

The business of bottling and selling the mineral waters of the State Reservation was carried on throughout the year by the Saratoga State Waters Corporation under the terms of its lease. The sale of waters has shown some increase during the past fiscal year, but it is rather difficult to figure how the State will ever realize any profit from this arrangement, because of the many things which the State must do under the terms of this agreement. As the corporation's business grows, any possible profit which might come to the State will very evidently be more than taken up by the extra work of maintenance, repairs, and supervision, which are the duties of this Department, under the terms of the contract. A statement of the financial results from the first complete year's operation of this lease, will be found in another part of this report.

In the spring of 1921 the sale of liquified CO_2 gas from our surplus mineral waters was advertised and duly let to Messrs. Brown & Lowe of Schenectady as the Saratoga Natural Carbonic Company. The gas is sold to them under the following conditions: They are to furnish all tubes and containers necessary for filling, transporting and selling the gas, and are to take care of all details of distribution. The Saratoga Natural Carbonic Company pays to the State a flat price per pound for gas compressed into their tubes and placed on cars at Saratoga Springs. They are to take a minimum amount of gas each year, this increasing year by year until a total amount of 750,000 pounds is reached.

The result of the first few months' operation, under this contract, shows clearly that this arrangement will produce a very considerable revenue to the State at a very low extra cost and from waters which had heretofore run to waste. The gross receipts for the first three months' operation were $1,819.92. This amount does not appear in the financial statement, inasmuch as these three months are in the fiscal year 1921–22.

Chemical Laboratory. During the year 1921 the laboratory has continued to exercise a strict chemical control of all the wells now in use on the Reservation. An unusual improvement has been noted in most of the wells, especially those located in the village — notably the Old Red Spring, Emperor, Peerless, Patterson and Congress. Of these the increase in flow of the Old Red and Congress springs has been quite phenomenal. In previous years the maximum flow to be expected from either of these wells was from one-half to three-fourths of a gallon per minute, but since the early spring of 1921, they have been flowing from three to five gallons per minute, with no apparent evidence of decreasing. The wells at the Lincoln tract that furnish all the water for bathing increased so much in the quantity of free carbon dioxide gas, that it was difficult at times to fill the storage tanks with water. It was necessary at all times to draw large quantities of gas from the tanks in order to keep the required amount of water in storage.

During the period of the heavy pumping of this tract of springs, close observation was made of the water levels of these wells and wells in the surrounding district to determine the extent of depletion of the mineral water basin.

From these observations and those of the previous year it appears that there can be no detrimental depletion of the mineral water area as long as proper scientific control of the pumping is maintained.

In accordance with the lease granted the Saratoga State Waters Corporation, the laboratory has inspected from time to time the bottling of the mineral waters and has made partial analyses of each day's run of water. This required a total of 310 chemical examinations. There has also been furnished a complete analysis of the Hathorn No. 2, Coesa and Geyser springs.

The new lease of the selling privilege of the excess natural carbonic gas has required considerable experimental work and chemical examinations of the gas. Chemical analyses have been made of practically every day's run of gas as compressed in the cylinders ready for the market. Frequent examinations have been made of the gas direct from the gasometer before entering the compressor.

The service of the laboratory has also been required to investigate difficulties of bottlers in conjunction with the use of gas.

During the year there has been a total of about 1,200 chemical and bacteriological tests made.

DIVISION OF WATERS

Report of the Division of Waters of the Conservation Commission for the half year ending June 30, 1921.

The Division of Waters of the Conservation Commission succeeded to the work originally carried on by the State Water Supply Commission, abolished in 1911. To the administrative functions of that commission, there had been gradually added, up to July 1, 1921, the activities required by the drainage laws, by supervision over the docks and dams of the State, by those required by the amplification of the River Improvement Law in the River Regulation by Storage Reservoirs Law, and there had also been required the general engineering for the Commission. The Division had also gradually amplified and extended the scope of the study of water power, beyond the making of surveys and gathering and studying of statistics. In this branch of the State service were made studies of the economic, business and legal aspects of hydroelectric power development, transmission and distribution, and based on these studies there were gradually evolved the principles upon which were finally founded the Federal Power Act and the State Water Power Act. The articles on drainage in the Conservation Law were also the result of this study of law, economics and business.

It is always necessary that there shall be combined in one mind or small organization a certain amount of the knowledge of the fundamentals of several sciences and professions before there can be taken any correct action in any business so involved as is the business of properly handling the vast water powers in which the State has a proprietary interest. The problem is further complicated by the relation of the State to its corporations and its duties to its people. The need for the work done was apparent, and the Division of Waters shouldered the job. It sought after facts, and strove for justice to all the people of the State in the measures emanating from it. Chapter 499 of the Laws of 1921 created the Water Power Commission, consisting of the Conservation Commissioner, the State Engineer and Surveyor and the Attorney-General, which took over the work heretofore done by the Division of Waters in the Conservation Commission, and transferred the employees of this division to the office of the State Engineer.

Water Power. During the year to July 1, 1921, the Division of Waters had under way surveys, mapping and estimates of capacity and cost of the Gooley reservoir on the upper Hudson, reference to which was made in our 1920 report to the Legislature. This work was not completed up to July 1st, about six weeks field work for one party and some mapping and studies remaining to be done.

On the Genesee river, some additional field information relative to power development in the gorge above Mt. Morris was obtained, and office studies made, using the additional stream flow data available since the studies made in 1910 and 1911. In the preparation of bills and in reports and collaboration thereon, the Division was frequently called upon.

Water Storage. The continuation of the proceedings in the matter of the Black River Regulating District required extended inspections and reports on the proposed Stillwater reservoir, and attendance on the various hearings of the Commission and the Board.

Drainage. The special emphasis which our colleges of agriculture and the departments of agriculture of the Federal and State governments have laid upon drainage during the past ten years is producing its effect, and there is increasing activity among farmers in this work. It was the policy of the Conservation Commission through its Division of Waters to furnish all the aid possible in making surveys, obtaining other data, and making plans and estimates; but to encourage the owners to form voluntary associations for doing the work themselves rather than following through the necessarily cumbersome procedure of the act — the assessment of benefits, collection of taxes, sale of bonds and construction by contract. As a result of this policy, the following projects have been carried through by the farmers themselves:

Capen Project (Niagara County). Work was staked out by the engineers of the Division of Waters and carried through by cooperation among those to be benefited.

Wallkill Project (Orange County). The Quaker creek, part of this project, was carried through in part by the farmers affected, the work having been laid out by the engineers of the Division of Waters.

Verona Project (Oneida County). This project was surveyed by the Commission in 1916 and is being carried out by private parties.

The Flats (St. Lawrence County). At the request of the owners, the work has been staked out for them to do.

The following projects received the attention of the Commission in the manner indicated:

Tibbits creek (St. Lawrence county), report and estimates;
Ley creek.

A petition in due form was received from the owners of 1,500 acres of land in the towns of Salina and DeWitt of Onondaga county, praying for the formation of the Ley Creek Drainage Improvement District. The Commission determined in due form that the project was of sufficient importance to warrant the interference of the State, and ordered a preliminary survey. Such survey was made and preliminary plans and estimates made. An informal hearing was held by the Commission on June 10, 1921, at which time the plans and estimates were explained to the owners and they were requested to state whether they wished the State to proceed further in the matter. It was also suggested to them that they try to get together in a voluntary agreement and do the work themselves. They unanimously expressed themselves as desirous that the State should proceed.

East Pembroke (Genesee County). The petition for the drainage of about 600 acres near East Pembroke, Genesee county, was filed with the Commission on August 21, 1920, and was surveyed in December.

Preliminary plans and estimates were prepared and presented to the owners on April 4, 1921. Of those who were present, a majority were opposed to the further prosecution of the project, and it was accordingly left without further attention from the Commission, but may be brought up at any time again by the owners.

Hastings (Oswego County). A petition in due form was filed with the Commission by the owners of about 3,000 acres of swamp lands near Central Square. A considerable part of this land is now under cultivation and is a very high grade of muck. Surveys were made in May and June, 1921, and the results turned over on July 1st to the Water Power Commission for its action.

Ballston Lake. Reconnaissance and conferences disclosed that this project was not for the primary purpose of the drainage of agricultural land for agricultural purposes, and it was not proceeded with.

Hydrometric Work. Stream flow measurements in the State were carried on in cooperation with the United States Geological Survey. The results of the work will be found in the reports of the United States Geological Survey and the State Engineer and Surveyor.

The gathering of this data is of the greatest importance to the State and private owners of water power. It involves a great amount of painstaking detail work, of which the United States Geological Survey has made a specialty for many years.

In addition to the general supervision of the stream gagings, the engineers of the Division of Waters continued its analysis of the data, and its use in estimating the water resources of the State and in the compilation and collation of the data.

General Engineering. The Division of Waters was called upon constantly for opinion, and plans and estimates for small works for the other divisions of the Commission. This included work on buildings and other structures and water supplies for fish hatcheries, estimates of quantity and value of water power sites on State lands or lands to be purchased for the Adirondack Park, etc.

Canaseraga Creek Improvement

The litigation of the question of the validity of the assessments for the improvement work was continued, and the engineering work in connection therewith done by the Division of Waters.

The maintenance work done on this project by the Division during the season consisted in the cleaning out of East and West Mud Runs by dynamite, the building of several stone and brush protective works, and the removal of portions of gravel bars and other obstructions.

By executive order of the Commission, the Division of Waters was charged with the responsibility for the execution of section 22 of the Conservation Law. Technical examination and revision of plans were made in the office by the engineers and field examinations made by an inspector of docks and dams.

Report of the Bureau of Docks and Dams, January 1 to June 30, 1921

This Bureau has examined and passed upon the proposed plans and specifications for one dock and twenty-four dams. The location and inspection of the existing structures were continued by five summer employees under the direction of the inspector of docks and dams. The assistants locate the docks and dams and report the condition and certain measurements and data required. To date there are over 2,000 docks and over 3,000 dams, concerning which we have data on file.

Water Supply and Sewerage

During the early part of the year 1921 activity in the construction of water supply systems picked up and there was good promise of a considerable number of applications during the course of the year. This condition was brought about by the decline in costs of material and labor and also by the urgent necessity for such systems which had arisen during the five previous years.

Sewerage applications came in at about the same rate as the year before.

By chapter 499 of the Laws of 1921, on July 1, 1921, the jurisdiction in water supply matters heretofore exercised by the Conservation Commission was transferred to the Water Power Commission, composed of the Conservation Commissioner, the Attorney-General and the State Engineer and Surveyor. By the same act, section 525 of the Conservation Law, under which all sewerage applications had been made to this Commission, was repealed.

Water Supply Applications

The following list shows action taken on water supply applications during the year 1921:

No.	APPLICANT	Filed	Approved	Permit to operate
224	Village of Canton			June 28, 1921
260	City of Watervliet		*Mar. 18, 1921	
261	Village of Tupper Lake	Jan. 21, 1921	Feb. 14, 1921	
262	Village of Brownville	Feb. 11, 1921	Mar. 11, 1921	Building.
263	City of Plattsburgh	Mar. 26, 1921	April 29, 1921	Building
264	Village of Ilion	June 14, 1921	June 29, 1921	Building

* Rejected.

Sewerage Applications

The following list indicates the action taken on sewerage applications during the year 1921:

No.	APPLICANT	Approved by State department of Health	Approved by Conservation Commission
904	Chapman, I. J. & Son, Canastota, creamery wastes	....	Jan. 6, 1921
905	Van Hornesville Cooperative Cheese Factory, wastes	....	April 6, 1921
942	Suffolk County Tuberculosis Hospital, Holtsville, disposal	....	Jan. 14, 1921
943	Port Chester, village of, Beech St.	....	Jan. 1, 1921
946	Letchworth Village, chlorination	Jan. 6, 1921	Jan. 19, 1921
947	Levy Dairy Co., Cedarville Station, wastes	Jan. 6, 1921	Dropped.
948	Dairymen's League Cooperative Association, Inc., Arkville, wastes	Jan. 26, 1921	Dropped.
949	Syracuse, city of, treatment works	Feb. 11, 1921	Mar. 3, 1921
950	Dairymen's League Cooperative Association, Inc., creamery at Port Jackson	Feb. 14, 1921	Suspended.
951	Syracuse Rubber Co., E. Syracuse, sewage	Feb. 15, 1921	Mar. 18, 1921
952	Spring Valley, village of, sewerage and treatment	Feb. 17, 1921	Mar. 3, 1921
953	Garden City Co., Cedar Valley, extension to pumping station	Feb. 18, 1921	Mar. 3, 1921
954	Community of St. Mary of Peekskill, disposal	Feb. 28, 1921	May 3, 1921
955	New Lebanon, Town of, School District No. 1, disposal	Mar. 5, 1921	Mar. 22, 1921
956	Brown & Bailey Condensed Milk Co., Lakeville, wastes and sewage	Mar. 16, 1921	Dropped.
957	Clyde, village of, omission from construction	Mar. 16, 1921	Mar. 31, 1921
958	Holbrook Co., Greenport, wastes	Mar. 16, 1921	April 8, 1921
959	Mamaroneck, Town of, Sewer District No. 1, disposal	Mar. 21, 1921	Mar. 29, 1921
960	Benson, Wm., Camp Buck Island, Lake Placid, disposal	Mar. 31, 1921	May 3, 1921
961	Agen, W. J., Madrid Creamery, wastes	April 1, 1921	May 7, 1921
962	Telling Belle-Vernon New York Company, Inc., Ripley, wastes	April 5, 1921	April 14, 1921
963	Westchester County Almshouse, Mt. Pleasant, treatment works	April 6, 1921	April 19, 1921
964	Canandaigua, City of, treatment works	April 6, 1921	April 19, 1921
965	Mohegan Inn Corporation, Yorktown, treatment works	April 6, 1921	May 27, 1921
966	Skaneateles Paper Co., Willow Glen, sewage treatment	April 6, 1921	April 28, 1921
967	Oneonta, Town of, School District No. 6, sewage disposal	April 13, 1921	April 28, 1921
968	Fisheries, Products Co., Promised Land, wastes	April 13, 1921	May 7, 1921
969	Rensselaer, city of, Willow Street	April 19, 1921	May 4, 1921
970	Owasco Country Club, sewage disposal	April 22, 1921	May 7, 1921
971	Tuckahoe, village of, Armour Villa Ave, Summit Street, etc.	April 23, 1921	May 3, 1921
972	Coon, E. W., cheese factory at Chaumont, wastes	April 25, 1921	May 4, 1921
973	A. & P. Products Corporation, Brockport, wastes	April 26, 1921	May 19, 1921
974	New York Association for Improving the Condition of the Poor, Home at Eltingeville, sewage	May 6, 1921	May 27, 1921
975	Fischang, L. E., Rendering Plant, Kingston, wastes	May 7, 1921	May 27, 1921
976	Woodridge, village of, sewerage and disposal	May 14, 1921	May 27, 1921
977	Harrowich, Dr. Max, Residence in Cornwall, disposal	May 16, 1921	June 4, 1921
978	Tarrytown, village of, Union Avenue, etc., extensions	May 20, 1921	May 27, 1921
979	Massena, village of, So. Main, Cook Street, etc., extensions	May 26, 1921	June 17, 1921
980	Wolfe, H. J., Milk Station at Bartlett, disposal wastes	June 7, 1921	Dropped.
981	Shefford Cheese Co., Creamery at Spring Lake, wastes	June 7, 1921	June 15, 1921
982	Southold, Town of, School District No. 5, sewage disposal	June 7, 1921	June 17, 1921
983	Bettman & Sugarman, Camp Barrington, disposal	June 7, 1921	June 28, 1921
984	Syracuse, city of, outfall works, details	June 7, 1921	June 17, 1921
985	Erie County Agricultural Society, Fair Grounds at Hamburg, disposal	June 7, 1921	Dropped.
986	Hempstead, Town of, School District No. 20, Lynbrook High School, Disposal	June 7, 1921	June 28, 1921
987	Mamaroneck, Town of, Sewer District No. 1, disposal, amendments	June 11, 1921	June 20, 1921
988	Papec Machine Co., Shortsville, sewage disposal	June 11, 1921	Dropped.
989	E. Rochester, village of, sewerage	June 11, 1921	Dropped.
990	Conewango Dairymen's Cooperative Association, Conewango Village, wastes	June 18, 1921	Dropped.
991	State School for Mental Defectives at Rome, sewage treatment	June 23, 1921	June 30, 1921
992	Villenova Cheese Factory Co., Villenova, wastes	June 30, 1921	Dropped.

CONSERVATION BUREAU

OF

ATTORNEY-GENERAL'S OFFICE

CONSERVATION BUREAU, ATTORNEY-GENERAL'S OFFICE

CHARLES D. NEWTON	Attorney-General
ADELBERT F. JENKS	Deputy Attorney-General In Charge of Conservation Bureau
E. J. LAKE	Deputy Attorney-General
EUGENE E. HOWE	Deputy Attorney-General
P. J. FINN	Deputy Attorney-General
W. T. MOORE	Deputy Attorney-General
J. O. BATES	Deputy Attorney-General

CONSERVATION BUREAU — ATTORNEY-GENERAL'S OFFICE

The Attorney-General's office, during the past year, has rendered many opinions involving matters relating to the Conservation Law. A brief summary of some of the more important opinions follows:

As to the power of the Legislature to regulate cutting trees on privately owned lands: Here an opinion was reached that the Legislature may regulate the cutting of trees on privately owned lands, under the police power of the State, provided, upon sufficient proof, it appears that an emergency affecting the health, comfort, morals or welfare of the people, or of any considerable part of the people, exists. This legislation, however, must be reasonable, nondiscriminative, affecting all of the same class alike, and adapted to meet the emergency sought to be relieved.

As to the power of the Legislature to enact a statute in view of constitutional prohibitions, authorizing the State Commissioner of Highways to occupy a right of way over lands in the Forest Preserve necessary to construct or improve the State and county highways, and using sand, gravel and stone from State lands necessary in connection with the improvement of said highways: Here it was found that the legislation which followed the adoption of the Constitution of 1894 rested upon the assumption that section 7 of Article VII, when properly construed, does not forbid the improvement of existing or the laying out and construction of new highways in the Forest Preserve by the Highway Department, nor the laying out of paths and roads by the Conservation Commission.

As to the construction of covenants in a deed by William Seward Webb and another to the People of the State of New York: This deed, dated January 16, 1896, conveyed to the people about 75,000 acres of land within the Forest Preserve. About 15,000 acres of this tract are within township 8 of John Brown's tract. The grantors owned other lands in township 8, and in their deed to the State covenanted that none of the remaining lands in this township belonging to these grantors, which had not already been contracted by them to be sold, "shall be used or sold for commercial, agricultural, manufacturing or other purposes, except as mentioned in said Thompson contracts, but the same shall by the parties of the first part, their heirs and assigns be used and sold exclusively for permanent forestry, hotel, camp and cottage purposes", and that future deeds should contain a clause "binding the purchaser thereof, his heirs and assigns to a perpetual use of said lands for permanent forestry, hotel, camp and cottage purposes". The Champlain Realty Company now owns through mesne conveyances about forty acres of the remaining land, which is subject to the covenants referred to. The Champlain Realty Company submitted for execution by the Conservation Commissioner an agreement affecting said covenants. It was held that the execution of an agreement providing for the cutting of timber on this tract of land subject to the covenants in said deed and subsequently reforesting the same, would be a violation of said covenants.

An opinion of interest, under consideration at the present time by the Attorney-General's office, relates to a claim presented by the British government to the United States government, through an international tribunal created by solemn convention, entered into between the two contracting governments, in behalf of the so-called Canadian Cayugas, living north of Lake Erie. The amount of the claim, with interest to the date of filing, is $976,028. The alleged liability is founded on a covenant of the United States in the Treaty of Ghent, that it would restore all rights possessed by Indian tribes in 1812, which were suspended on account of hostilities against the United States in that war. The State of New York in 1795 purchased the lands of the Cayuga Nation by treaty, and agreed to pay $2,300 by annuity forever to them. Prior to that time the Cayugas became divided. A portion of the tribe crossed the lakes and lived with the Mohawks at the Grand river. Since 1812 only those Cayugas living on the New York side of the lakes have received and participated in the annuity. The Canadian group have made repeated attempts to have the State of New York recognize them as entitled to participate, but without avail. The New York group of Indians contend that, in separating in 1784, those who removed from this State abandoned all rights in tribal property lying on this side of the lakes, and have opposed all efforts of the Canadian Indians to share in the annuity. The question of the liability of the United States, under the provisions of the Treaty of Ghent and the Convention of 1852, must be considered, as well as other questions affecting a settlement.

Partition Actions

Of seven partition actions commenced by Frank L. Bell and George N. Ostrander, wherein the State is made a party defendant, one action, involving Lot 19, Oxbow Tract, Hamilton county, was decided adversely to the State. Judge McPhillips contended that the deed from the Comptroller, on account of the sales of land for taxes in the year 1877, and all subsequent sales, be declared null and void as to Lot 19, Oxbow Tract, on condition that taxes for nonpayment of which the alleged sales were made in 1877, 1881 and 1885 be ascertained by the Comptroller and paid by the plaintiffs. This case is on appeal to the Appellate Division.

The other partition actions involve the same law question, and the law applicable here is to abide the event of final decision in the appellate court or courts in the Lot 19 case. A stipulation has been entered into to try these cases before Judge Borst.

Judgment has been entered in a partition action commenced by the People against Finch, Pruyn Company involving Lots 71, 72, 85 and 86 in the Tract West of road Patent, Essex county.

Another partition involves Lot 19, Tract West of Road Patent, Essex county. This was commenced by Finch, Pruyn Company against William H. Faxon and the People in September, 1921.

An action entitled "Frank L. Bell v. Stella Phelps Bell, Theron Smith et al., and the People of The State of New York" is at issue. This involves partition of Lot 80, Township 21, Totten & Crossfield's Purchase, Hamilton county.

Claims

Eleven claims have been filed against the State of New York by the International Paper Company, Champlain Realty Company and Frank L. Bell, involving lands appropriated in Township 11, Old Military Tract, Essex county. The awards demanded in the claims amount to $575,920.

Another claim referred to this Bureau is for permanent appropriation of minerals, easements and rights in land by the State for public and State park purposes pursuant to section 59 of the Conservation Law and chapter 146 of the Laws of 1917. This claim is filed by Lilla L. Thompson and others, and the alleged damage amounts to $1,000,000.

Penalty Actions

A trespass action brought against Hyland Steeves in Washington county, for penalties and damages for cutting trees on lands in the Forest Preserve, was decided in favor of the State, and the amount of the judgment with costs has been transmitted to the State Treasurer.

In Franklin county two actions were commenced against various defendants for using spot lights while hunting deer. These actions were adjusted by the payment in each instance of $50 to the State.

An appeal is pending in an action brought by the People against Clarence Longwell in Schuyler county. The alleged violation was for operating a fyke net in the waters of Lake Lamoka. Verdict for defendant was rendered in March.

A top-lopping case against Fred Perkins was commenced in May, 1921, and settlement was perfected for $20 in September. This action was brought for failure to lop 20 evergreen trees in the town of Wilmington, Essex county.

Various actions for penalties involving the above questions and others relating to the Conservation Law, have been disposed of during the year and several are at issue and on appeal.

Title Actions

Of the many ejectment actions commenced during the year, one against George H. Carlin, on Township 40, Hamilton county, is of interest. Upon the trial of this action the judgment obtained against Mr. Carlin in 1904 will be considered by the court as well as subsequent facts in connection with the title to this parcel. A motion to issue execution on the old judgment was denied by the courts.

In an action against George Baldwin and Jennie Baldwin in Hamilton county, where Justice Whitmyer held that title by adverse possession could not be acquired as against the State, the Appellate Division has affirmed this opinion. The defendants have served notice of appeal to the Court of Appeals. It is desirous that the principle here involved should be passed upon by the Court of Appeals, as it has an important bearing on many matters involving Adirondack and other lands.

Actions against John W. Olmstead and George N. Ostrander were disposed of by defendants refunding to the State, in each instance, the sum of $138.97, on account of failure of title to land to which they had given the State a warranty deed in Hardenburgh Patent, Great Lot 6, Robinson Tract, Lot 207. The State purchased this parcel of land from Olmstead and Ostrander in 1900, and subsequently the State, having brought an action in ejectment against one Hiram Sprague, an occupant of the land, was defeated, and costs to the extent of $114.74 were taxed against the State. The deed given the State by Olmstead and Ostrander, contained a covenant of warranty; and in the above actions the amount received represented the purchase price paid by the State, with interest thereon for six years at 6 per cent, and the costs taxed against the State in the ejectment action.

Ejectment actions disposed of during the year by trial involve lands in various counties. Among them, mention is made of an action against Henry Dupell and Clara Dupell, where it was sought to recover possession of Lot 70, Township 4, O. M. T., Clinton county. This was decided in favor of the State. Another action in which judgment for the State has been entered is entitled "The People against David Brennen". This relates to Lots 86 and 107 of Township 9, Moose River Tract, Hamilton county. Two actions involving lands in Lewis county have been tried but have not been decided by the court.

The foregoing report illustrates the character and variety of the work of the Conservation Bureau of the Attorney-General's office, but not its volume. It would serve no useful purpose to catalogue all the activities of the Bureau. Opinions are sought on all sorts of questions connected with the Conservation Law in its application to the public. Many of these questions are of far-reaching importance, and, in answering them, careful study and numerous consultations are required, to the end that sound conclusions may be reached. The Comptroller has upon his list of State lands, a large number of parcels located in the Forest Preserve, upon which the State is paying taxes. In many cases the State's title, derived from tax sales, is in grave doubt; and friendly actions have to be commenced, as it is deemed against public policy to abandon the State's claim of title to land. It is considered wiser to submit such cases to the Supreme Court. Difficult questions of title are constantly under examination in aid of land purchases for Forest Preserve purposes, and in preparing to try ejectment and equity actions involving such questions.

The Bureau defends the officers and employees of the Conservation Commission in all cases, where, in the discharge of their duties, they are charged with negligent or other tortious conduct resulting in damages. Several such actions have been defended during the past year. A claim for damages against the former Conservation Commissioner growing out of his refusal to recognize the validity of a lease granted to the Saratoga State Waters Corporation by the Commissioners of the State Reservation at Saratoga Springs, is now pending in the Supreme Court. This action is being defended by the Conservation Bureau. Actions for penalties for violations of the fish and game law; for the pollution of streams inhabited by fish; for unlawfully setting fires in the Forest Preserve and in certain towns outside thereof; and for cutting timber and other trespasses upon State land, are always pending, and constant effort is required to prevent their accumulation.

The Bureau also defends all claims for lands appropriated by the Conservation Commission for Forest Preserve purposes, and all other claims where the rights and interests of the State in relation to conservation are involved.

The Bureau has recently entered a judgment upon an order of the Appellate Division, Fourth Department, which reversed a judgment of over $100,000 against the State, and dismissed the claim upon the merits. The claim of the Taggarts Paper Company growing out of the appropriation of land for the Forest Preserve, demanding about $450,000, was cut by the Court of Claims to a little over $200,000. The Court of Claims refused to allow interest on the value of the land, damages resulting from the Gaffney option, and expenses of preparation for trial, amounting to over $100,000. Both the Appellate Division and the Court of Appeals have sustained the contentions of the Conservation Bureau, and the matter is now pending in the Supreme Court of the United States.

FINANCIAL STATEMENT

FINANCIAL STATEMENT

Summary of Receipts and Disbursements, Exclusive of Regular Accounts with the State Comptroller and of Division of Saratoga Springs, for Fiscal Year Ending June 30, 1921.
